

---

### Level 1 Charger

This charger has 120-volt cord that plugs into the wall.

It provides an approximate range of 4 to 6 miles for every hour of charging.

This charger may not require an electrician.

---

### Level 2 Charger

This charger requires a 208/240-volt service.

It provides an approximate range of 25 to 40 miles for every hour of charging.

An electrician is needed to set up electrical wiring for a new outlet or breaker, and potentially a service panel upgrade.

---

### Level 3 Charger

This charger is typically used for public charging.

It provides an approximate range of 40 miles for every 10 minutes of charging.

This typically required 480-volt service from a trained electrician.
