

**Save Energy
& Save Money**

Make Your Next Home an APS ENERGY STAR® Home

APS Energy Star® Homes are specially designed and constructed so that the latest energy efficiencies are built right into the home. So when you live in an APS Energy Star® Home, you'll use less energy and save money every day. APS Energy Star® Home builders consider the interaction of all a home's systems — including cooling, windows, insulation, appliances and lighting — to construct a home that will save energy and money.

APS Energy Star® Homes — Savings and More

APS Energy Star® homes are randomly tested and inspected. Each home is designed and built to ensure it's a home that will save money for the home owner. These homes use a variety of energy-efficient features, including:

- Improved insulation
- Energy-efficient lighting and appliances
- Tight construction and ducts
- High efficiency air conditioning systems
- High performance windows

When you are in the market for a new home, consider an APS Energy Star® home for the following reasons:

- **Lower operating costs** – Save money in lower cooling, heating, and appliance costs
- **Better performance** – Even temperatures throughout the home for enhanced comfort
- **Friendly to the environment** – Energy efficient homes help improve air quality and conserve resources
- **It's a smart investment** – Energy efficient homes add value when it comes time to sell

Find an APS Energy Star® Home

To find out more about APS Energy Star® Home, or for a list of APS Energy Star® Home builders, visit aps.com or call 602-371-7171 or 800-253-9405.

The APS Energy Star® Homes program was approved by the Arizona Corporation Commission and is funded by APS customers.
