**SUCCESS WITH
ENERGY STAR®**

Success with ENERGY STAR[®]

Congratulations! As a builder that has partnered with the APS ENERGY STAR[®] Homes program, you are already committed to increasing the performance and efficiency of your homes.

APS is here to help you realize success with energy-efficient construction. Part of our support includes **Success with ENERGY STAR** – simple, effective and customized training to help you and your trade partners understand how ENERGY STAR homes function as a system.

This workshop is FREE to builder partners; you simply agree to host the training and commit to promoting employee and trade partner attendance.

The workshop is conducted by Advanced Energy, a nationally recognized building science training and consulting firm. Advanced Energy's professional staff provides a proven implementation process and regular on-site – as well as remote – support to builders.

What you will receive

CURRENT BUILDING PROCESS REVIEW

Pinpoint where improvements can be made in design, construction or process.

EDUCATION AND TRAINING

Learn how to streamline APS ENERGY STAR implementation; enhance your trade allies' understanding and capability to build critical details in compliance with ENERGY STAR Thermal Bypass Checklist requirements.

FIELD SUPPORT

Receive a "toolkit" from APS with "tech tips" that illustrate how critical details should be constructed. This helps reinforce training in the field, and is easily accessed when questions arise.

PROCESS FEEDBACK

Because ENERGY STAR homes operate as a "system," contractors and trade partners will be trained to verify critical details of a previous contractor's work prior to beginning their own work, and report verification to the builder.

CONSULTING SUPPORT

APS' partner, Advanced Energy, will continue to assist participants, either on-site or over the phone, in obtaining desired results quickly and efficiently.

Get started today!

- 1 Reserve a workshop date. Allow at least one and a half days for the workshop.
- 2 Secure the location for workshop; we recommend in-house meeting rooms, hotel conference rooms, or on location in a model home.
- 3 Commit to having the right people attend the workshop. This includes the management team and site superintendents plus the principals of your trade partners (framing, insulation, electrical, plumbing and HVAC). Scheduling details will be provided before the workshop dates.
- 4 Apply the process in the field, obtain feedback on results and schedule any consulting help or assistance required.
