

# Wildfire Loss / Prevention

APS will be in your neighborhood creating a "Defensible Space" of 10-15ft. around wooden utility power poles and anchor wires; trying to minimize the wildfire danger and to prevent the loss of power.

This work will be done at **no expense to you**. The goal of this program is to ensure that you have safe and reliable electric service.

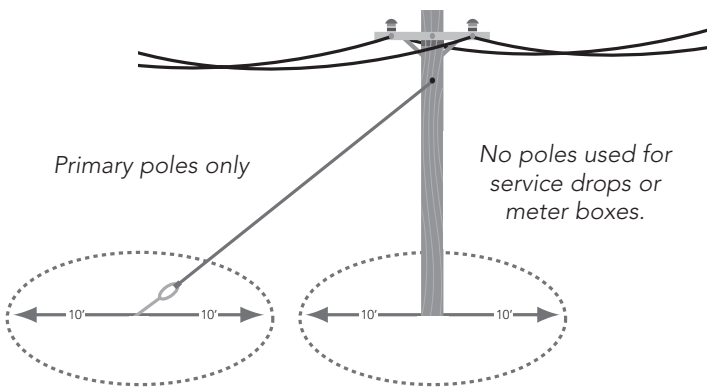

Poles will need to be cleared of all brush at a distance of 10–15ft. (average 12') depending on the slope on which the pole is located. All brush and grasses will be removed and any tree that we can not trim to a safe distance must be removed. All cactus species will be left in place.

If you have any questions please call us at \_\_\_\_\_

Wildfire Prevention Planner \_\_\_\_\_ Date \_\_\_\_\_

Job #s \_\_\_\_\_

**If we do not hear from you in 5 days,  
work will proceed as scheduled.**

Due to the never-ending threat of wildfires in our state and the large number of urban interface communities developing across the landscape, we appreciate your cooperation with this project.

**THE POWER TO MAKE IT HAPPEN®**
