## PRE-APPROVED EQUIPMENT LIST

### RESIDENTIAL ALL-IN-ONE METER PANELS

#### (THAT WILL ACCEPT LOAD CONTROL CT'S IN THE NON-SEALED AREA)

All new panel installations and upgrades will require customer/contractor to install an all-in-one denoted on this list, *with main disconnect(s) that meet current AIC requirements (per APS ESRM)*. APS does not allow the use of the flush mount panel design with an overhead panel. Overhead riser is not allowed to be enclosed or covered in a wall. APS will not allow overhead conductors to terminate on the bottom of the socket because of the tension the wire places on the socket. If it enters from the top, the wire needs to mount on the top. If the conductor enters from the bottom, it needs to terminate on the bottom of the socket. This list of residential all-in-one equipment is based on manufacturer's input. It is intended as an informational tool regarding what equipment will accept load controller CT's in the non-sealed, customer portion of the service equipment. Equipment not listed does not imply CT location in sealed utility area is permitted. Equipment shall have CT's located in the customer's side of the equipment. In all cases, APS Service Requirements and EUSERC Manufacturing Requirements shall apply. For specific questions regarding the service equipment, please contact the Manufacturer's Representative listed.

APS does not allow the use of the flush mount design with an OH panel. The affected catalog numbers are marked with an asterisk (\*). This note applies to all residential panels on this approved list

### RESIDENTIAL PRE-APPROVED MULTI-PAKS

This list of residential multi-paks is based on manufacturer's input. It is intended as an informational tool regarding equipment that meets APS requirements and EUSERC requirements for residential wall mounted multi-meter equipment. APS does not endorse, nor has necessarily inspected and approved each device. Any equipment not listed below must be submitted for approval by the manufacturer prior to its use. In all cases, APS Service Requirements and EUSERC Manufacturing Requirements shall apply. For specific questions regarding the service equipment, please contact the Manufacturer's Representative. *Main disconnect(s) must meet current AIC requirements (per APS ESRM).*

## PRE-APPROVED EQUIPMENT LIST

### PRE-INSPECTED METER PEDESTALS FOR RESIDENTIAL USE

The following listing of Mobile Home Type Meter Pedestals has been put together with the Manufacturers' cooperation. Representative sample pedestals were submitted to the APS Meter Shop and Marketing Technical Services for evaluation with those pedestals indicated below having met the equipment portion of the APS Electric Service Requirement Manual. The Manufacturer or Manufacturer's Representative has provided appropriate documentation and has agreed to supply only those pedestals, which meet APS requirements.

APS reserves the right to update this list so that it becomes effective upon re-issuance. Any safety related violation or other extreme violation is valid reason for non-approval of subject equipment at any stage of installation.

NOTE: For full approval, the pedestal must be installed in accordance to the N.E.C., local regulation, and the APS Electric Service Requirements Manual *with main disconnect(s) that meet current AIC requirements (per APS ESRM)*. Consult your local APS Customer Service Representative for the APS requirements.

## PRE-APPROVED EQUIPMENT LIST

### PRE-APPROVED PRODUCTION METER SOCKETS

The following list of "Production Meter Sockets" has been put together with the Manufacturers' cooperation. Representative samples were submitted to the APS Renewables team and the APS Meter Shop for evaluation to verify they comply with the APS ESRM requirements, EUSERC requirements and the APS Interconnect Standards. The Manufacturers have agreed to supply only those meter sockets listed below for use as production meter sockets on the APS system.
