

Sundance to Pinal South 230kV Transmission Project

Overview

As part of APS' continuing effort to meet the increasing demand for electricity, the APS Transmission and Facility Siting Department has initiated a process to identify possible alternative routes for a new 230 kilovolt (kV) transmission line to connect the Sundance Generating Station and the future Pinal South Substation. APS intends to prepare and submit an application for a Certificate of Environmental Compatibility (CEC) to the Arizona Corporation Commission (ACC) in 2007.

Location

Both the Sundance Generating Station and the future Pinal South Substation are located in unincorporated Pinal County as illustrated on the map on the back of this fact sheet.

Project Need

The proposed project will accomplish the following objectives:

- Increase local capacity, which will improve the reliability and continuity of service for the electrical load in the area
- Allow APS to schedule the full output capability of the Sundance facility, currently estimated at 420 megawatts during peak summer conditions
- Economically provide a new 230kV path for existing and potential future generation at the Sundance facility

Outreach

APS will provide project information, as well as opportunities for the public to ask questions and provide comments throughout the siting process. APS will also brief potentially affected jurisdictions, communities, and agencies, as well as business and civic leaders. Project information will be available to the public through the following sources:

- Project Web site, <http://siting.aps.com>
Select "Current Projects" and then click on the link for the "Sundance to Pinal South 230kV Transmission Project"
- APS Transmission and Facility Siting Project Information Line, **1-866-472-4484**
Press 2 to be directly connected with the APS Project Manager
- Project Newsletters
- Public Open House(s)

Schedule

The time required to site transmission lines varies by project. The following schedule is anticipated for this project:

- | | |
|---------------------|--|
| • Early Summer 2007 | Meetings with jurisdictions and agencies |
| • Summer 2007 | Initial newsletter and public open house |
| • Late Summer 2007 | Complete analysis and identify preferred route |
| • Fall 2007 | File CEC application and initiate ACC process |
| • Summer 2011 | Transmission line in-service |

Contact

Greg Bernosky, APS Project Manager can be reached by phone as noted above or by email at Gregory.Bernosky@aps.com
