IMPORTANT INFORMATION FOR PROPERTY OWNERS

Arizona Power Plant and Transmission Line Siting Committee hearings will be conducted beginning each day at 9:30 a.m. on Tuesday, January 22nd & Wednesday, January 23rd, 2008.

The Property Conference Center 1251 Gila Bend Highway Casa Grande, AZ 85222

Public comment will be taken at the beginning of each hearing day. Public comment also will be taken in a special evening session at The Property Conference Center on January 22, 2008 beginning at 6:30 p.m.

Sundance to Pinal South 230kV Transmission Project

December 2007 • Issue 3

APS Selects Preferred Route and Files CEC Application

Following the October 2007 Open House and continued analysis by APS and its environmental consultant, Arcadis, a Preferred route for the Sundance to Pinal South 230kV Transmission Project was identified and included as part of an Application for Certificate of Environmental Compatibility (CEC Application). The CEC Application was filed by APS with the Arizona Corporation Commission (ACC) and the Arizona Power Plant and Transmission Line Siting Committee on December 11, 2007. The Preferred route was selected based on a detailed analysis of environmental, engineering, cost, right-of-way, and construction considerations, as well as public and agency input.

APS is very appreciative of the feedback that has been provided through comments received at the open houses, the project Web site, community and agency meetings, and direct contact with the APS project manager during the last several months. Your input is an important part of the line siting process and has been documented as part of the CEC Application.

Preferred and Alternate Routes

The map on the inside of this newsletter illustrates the preferred and alternate routes, as well as the associated corridors that are being requested for approval by the ACC. Although wider corridors are being requested at this point in the process, it is important to note that APS will ultimately construct the new 230kV transmission line within a right-of-way of 100 to 130 feet.

Both routes will originate at a new substation, which will be located on 10 acres of the existing Sundance property owned by APS (see the grey triangle for an approximate location on the inside map). In order

for Greg Bernosky,
Project Manager

For more information please visit our Web site at http://siting.aps.com and select the link for Current Projects

to provide power to this substation, a single 230kV transmission line circuit (the blue dotted line on the map) will be constructed on APS property from this substation to connect with the existing Sundance generation units.

Preferred Route (Solid Blue Line)

This route originates at the new substation at Sundance as noted above and would parallel the south side of existing and future natural gas pipelines north of Randolph Road to the Curry Road alignment. The location of the route in this area would depend

on engineering considerations described under the heading of "Northern Corridor Area" below. The preferred route then follows Curry Road to approximately the half-section between State Route 287 and the Earley Road alignment. From this point, APS would parallel the future Pinal West to Southeast Valley/ Browning 500/230kV transmission line proposed by Salt River Project (SRP) to the Pinal South Substation.

Alternate Route (Dashed Blue Line)

This route also originates at the new substation at Sundance and would follow the same alignment "Your input is an important part of the line siting process and has been documented as part of the CEC application."

Greg Bernosky, Project Manager

as the preferred route to the half-section alignment between Curry and Tweedy Roads. The route would then continue south along this alignment to the Earley Road alignment and then continue east to Eleven Mile Corner Road before turning north to the Pinal South Substation.

Corridor Areas

APS is requesting approval for the two broader corridor areas described below in order to have the flexibility to address future land acquisition and design considerations.

Northern Corridor Area

APS is seeking approval for a corridor of sufficient size between the existing

natural gas lines and Randolph Road to accommodate the appropriate separation between the gas lines and the proposed transmission line based on engineering and design requirements.

Southern Corridor Area

APS is continuing to work with SRP and Pinal County to identify a potential route for the project in an area including the Pinal County Fairgrounds, located immediately west of the existing ED-2 Substation and future Pinal South Substation along Eleven Mile

Corner Road. The requested corridor is wide enough to allow the project to be built along the preferred or alternate route, or a route within the blue-hatched area as noted on the map.

Next Steps

The first two dates of hearings before the Arizona Power Plant and Transmission Line Siting Committee will be conducted beginning each day at 9:30 a.m. on Tuesday, January 22nd and Wednesday, January 23rd, 2008 at the following location:

The Property Conference Center 1251 Gila Bend Highway Casa Grande, AZ 85222

Public comment will be taken at the beginning of each hearing day. Public comment also will be taken in a special evening session at The Property Conference Center on January 22, 2008 beginning at 6:30 p.m.

Additional information about the project and continued opportunities to provide comments or questions are available through our Web site at http://siting.aps.com or by contacting APS Project Manager Greg Bernosky toll free at 1-866-472-4484 (select Option 2 for this project).
