

## Take Charge AZ for Workplace Charging

Arizonans spend the majority of their drive time commuting to and from work and with carbon footprints top of mind, many people are wanting to make the switch to electric vehicles. One of the biggest barriers to purchasing an EV is the fear of not having enough charge to make it to and from a destination, particularly work. You can put your employees (and customers) at ease by participating in our Workplace Charging pilot.

Customers selected for this pilot will receive the infrastructure necessary to charge up to four EVs at one time. At no cost to the customer, we will:

- Purchase the charging stations – two stations with two plugs each
- Install the electrical cable and other equipment necessary to provide power to the charging station
- Establish service and create a dedicated APS account for tracking and billing the energy used by the chargers
- Perform routine equipment checks and respond to any issues
- Help educate staff and/or customers who use the chargers on the benefits of charging EVs during the middle of the day

This pilot is designed to improve the accessibility to charging stations, but does not provide free charging. Customers selected will be responsible for the energy costs associated with drivers charging their vehicles.

### Who Qualifies

There are a limited number of free chargers available through this pilot. Applications will be reviewed to determine which customer sites will contribute the most to a broader EV charging network in Arizona; therefore, sites that already have chargers will not be considered. Ideal candidates for this pilot are customer sites where:

- There is enough space to physically accommodate the chargers
- Employees have EVs or have expressed interest in owning EVs
- Vehicles are parked for extended periods during the middle of the day so that the chargers can be powered by Arizona's abundant solar energy

### Have Questions?
