

Prescribe energy efficiency for your healthcare facility

Healthcare facilities are energy intensive, spending over \$6.5 billion each year on energy-related costs.¹ Replacing outdated equipment with new energy-efficient technology can make an impact on the bottom line, help improve the indoor environment and contribute to enhanced comfort.

Whether you're upgrading your existing facility or planning a new construction project, we are here to help with rebates for qualifying energy-saving projects. Flip to the back to learn more about how to transform your healthcare facility.

Diagnose and improve energy use for long-term savings.

Energy-efficient equipment facts:

Replacing older HVAC units with energy-efficient models can save up to 40% in energy costs.²

New chillers are 10-30% more efficient than older models.³

LEDs save up to 90% in energy use and can last 15 times longer than traditional bulbs.⁴

ENERGY STAR® computers use 30-65% less energy than standard models, depending on usage.²

Implement cost-saving measures:

- Utilize an energy management system to optimize and monitor HVAC performance and lighting operation.
- Add variable speed drives to HVAC fans, water pumps and chiller compressors to reduce consumption, extending equipment life.
- Replace fluorescent lighting or older LEDs with newer fixtures for better light quality and reduced energy consumption.
- Install occupancy sensors in low-traffic areas, like restrooms and storage areas.
- Upgrade outdated medical equipment to more efficient options.
