

Rebates for business

Make lighting upgrades
more affordable

Find rebates to switch from fluorescent tubes to LEDs.

For businesses, T12s or T8s are common lighting sources. But it's not the only choice. Switching to LEDs has many advantages.

- Long-rated life of 50,000 hours or more
- Work well with occupancy and daylighting controls
- Resistant to vibration and breaking
- Well suited for refrigeration applications
- Excellent light quality to optimize visibility

LED replacement tubes and LED retrofit kits are good options. Or, consider replacing the fluorescent luminaires with new fixtures designed for LEDs. We can help you make the best choice for your business.

Find lighting and other rebates for equipment upgrades at aps.com/s4b.
