Accreditation/Certification Summary

Client: Arizona Public Service Company — Job ID: 550-173411-1
Project/Site: CCR Groundwater Monitoring — SDG: APS Cholla Power Plant (BAP)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification Unconfirmed	***Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)*** ☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For ____ Months*

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Table of Contents

Qualifiers

Metals

Qualifier	Qualifier Description
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-173411-2

Narrative

Job Narrative
550-173411-2

Comments
No additional comments.

Receipt
The samples were received on 11/1/2021 3:48 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.2º C, 1.3º C, 1.4º C, 2.4º C and 2.9º C.

Receipt Exceptions
The 500 ml container for Denver workshare received with 100 ml of volume.

CH-CCR-W317-1021 (550-173411-47), CH-CCR-W317-1021 (550-173411-47[MS]) and CH-CCR-W317-1021 (550-173411-47[MSD])

Metals
Method 200.7: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 280-558984. An LCSD was included on the batch. Method: 200.7_P_TOT/200.7

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Definitions/Glossary

Qualifiers

Metals

Qualifier	Qualifier Description
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
Revised Report 1

Revision
The report being provided is a revision of the original report sent on 12/19/2021. The report (revision 1) is being revised due to: Incorrect sample date on samples 3 and 4 - Date changed from 12/1/21 to 12/2/21.

Receipt
The samples were received on 12/6/2021 4:11 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.9º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Sample Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-175274-1

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-156051-1
SDG: APS Cholla Power Plant (FAP)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
N1	See case narrative.

Metals

Qualifier	Qualifier Description
B3	Target analyte detected in calibration blank at or above the method reporting limit.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 1/11/2021 8:14 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.3º C.

HPLC/IC
Method 300.0: A matrix spike / matrix spike duplicate (MS/MSD) was not prepared for Anions by method EPA 300.0 associated with analytical batch 550-231854 due to an analyst error. The results for the associated laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were within acceptance limits which may be used to verify batch accuracy and precision. As such, these data have been reported and qualified with N1 flags.

EW04-010521 (550-156051-1) and EW02-018521 (550-156051-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8 LL: The continuing calibration blank (CCB) for analytical batch 550-230325 contained Molybdenum above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Job ID: 550-156051-1
Project/Site: CCR Groundwater Monitoring
SDG: APS Cholla Power Plant (FAP)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-08-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification
Unconfirmed

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Metals

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
B3	Target analyte detected in calibration blank at or above the method reporting limit.
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the blank.
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
L3	The associated blank spike recovery was above method acceptance limits.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H1	Sample analysis performed past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-162157-1

Narrative

Job Narrative
550-162157-1

Comments
No additional comments.

Receipt
The samples were received on 4/19/2021 10:41 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 3.0º C, 3.3º C, 4.0º C, 4.2º C and 5.8º C.

HPLC/IC
Method 300.0: The following source sample for the matrix spike / matrix spike duplicate (MS/MSD) was diluted for Fluoride due to the nature of the sample matrix: CH-CCR-M44D-0421 (550-162157-3). An elevated reporting limit (RL) has been provided.

Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: CH-CCR-M46-0421 (550-162157-5). This analyte was not detected in the diluted sample. As such, an elevated reporting limit (RL) has been provided.

Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: CH-CCR-M43-0421 (550-162157-1). As such, an elevated reporting limit (RL) has been provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8 LL: The continuing calibration blank (CCB) for analytical batch 550-240469 contained Arsenic above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.7 Rev 4.4: The method blank for preparation batch 550-239926 and analytical batch 550-240432 contained Sodium above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method 200.7 Rev 4.4: The following samples were diluted to bring the concentration of target analytes within the calibration range: CH-CCR-W126-0421 (550-162157-23), CH-CCR-GeronC-0421 (550-162157-25) and CH-CCR-GeronD-0421 (550-162157-26). Elevated reporting limits (RLs) are provided.

Method 200.8 LL: The continuing calibration blank (CCB) for analytical batch 550-241021 contained Thallium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.8 LL: The laboratory control sample (LCS) associated with preparation batch 550-240803 and analytical batch 550-241021 was outside acceptance criteria for Barium. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 200.8 LL: The following samples were diluted due to the nature of the sample matrix: CH-CCR-M43-0421 (550-162157-2), CH-CCR-M46-0421 (550-162157-6), CH-CCR-M50-0421 (550-162157-8), CH-CCR-M51-0421 (550-162157-10), CH-CCR-M64-0421 (550-162157-13), CH-CCR-M65-0421 (550-162157-15), CH-CCR-M66-0421 (550-162157-17), CH-CCR-M67-0421 (550-162157-19), CH-CCR-W123-0421 (550-162157-21), CH-CCR-W126-0421 (550-162157-24), CH-CCR-HuntB-0421 (550-162157-27) and CH-CCR-FD05-0421 (550-162157-28). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Job ID: 550-162157-1 (Continued)

Laboratory: Eurofins TestAmerica, Phoenix (Continued)

Method SM 2540C:

Method SM 2540C: Reanalysis of the following sample(s) was performed outside of the analytical holding time due to wrong aliquot used for sample, which made result >0.2. Reran sample with correct aliquot. CH-CCR-M50-0421 (550-162157-7).

Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 550-240618 were outside control limits for Total Organic Carbon (TOC). Sample matrix interference was suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 550-241040 were outside control limits for Dissolved Organic Carbon (DOC). Sample matrix interference was suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-162157-1

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-08-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☑ Disposal by Lab ☐ Archive for______ Months

Special Instructions/QC Requirements & Comments:

*Perform Method 200.8 with collision cell; * As marked on the bottle; perform dissolved analyses with sample provided in bottles marked 'field filtered'*

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification
Unconfirmed

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: APS FAP (Cholla)

Job ID: 550-165381-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H1	Sample analysis performed past holding time.
H3	Sample was received and/ or analysis requested past holding time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 550-165381-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-165381-1

Comments
No additional comments.

Receipt
The samples were received on 6/14/2021 2:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.8º C.

Receipt Exceptions
The Chain-of-Custody (COC) was incomplete as received and/or improperly completed.

Please verify project used to complete login.
Client did not list analytes needed for 300 and metals needed 200.7 and 200.8.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The continuing calibration blank (CCB) for analytical batch 550-245649 contained Sodium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.7 Rev 4.4: The following sample was diluted to bring the concentration of target analytes within the calibration range: CH-DEV-W126R-0621 (550-165381-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2320B: Reanalysis of the following samples were performed outside of the 14 day analytical holding time for Alkalinity by method SM 2320B due to an instrument failure that occurred during the initial run; CH-DEV-W126R-0621 (550-165381-1) and CH-DEV-W123R-0621 (550-165381-2). The initial analysis occurred within holding time although an instrument failure occurred interrupting the analytical run, therefore the initial run had no usable data. Reanalysis occurred promptly although the holding time had already been exceeded. As such, the data has been reported and qualified with H1 flags.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: APS FAP (Cholla)

Job ID: 550-165381-1

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	No analysis requiring residual chlorine check assigned.

Table of Contents

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: Replacement Well Initial Low Flow

Job ID: 550-165540-1
SDG: APS Power plant

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 550-165540-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-165540-1

Comments
No additional comments.

Receipt
The samples were received on 6/16/2021 12:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.9º C.

HPLC/IC
Method 300.0: The following sample was diluted for FLuoride due to the nature of the sample matrix: (550-165264-J-17 ^50). An elevated reporting limit (RL) has been provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company — Job ID: 550-165540-1

Project/Site: Replacement Well Initial Low Flow — SDG: APS Power plant

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

550-165540 Chain of Custody

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification
Unconfirmed

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Metals

Qualifier	Qualifier Description
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-166242-1

Comments
No additional comments.

Receipt
The samples were received on 6/30/2021 1:30 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.8º C.

Receipt Exceptions
The Chain-of-Custody (COC) was incomplete as received and/or improperly completed.

COC does not list 200.7 metals needed.
Logged in 200.7 method, metals will need to be adjusted.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-168312-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-168312-1

Comments
No additional comments.

Receipt
The samples were received on 8/4/2021 10:54 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The following sample was diluted to bring the concentration of target analytes within the calibration range: CH-CCR-GSX1R-0821 (550-168312-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method SM 5310B: An incorrect volume of spiking solution was inadvertently added to the continuing calibration verification (CCV) samples associated with 550-251294 for Total Organic Carbon (TOC). Percent recoveries were based on the amount spiked and fell within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company — Job ID: 550-168312-1
Project/Site: CCR Replacement Well Sampling — SDG: APS Cholla Power Plant (FAP)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Other:

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
N1	See case narrative.

Metals

Qualifier	Qualifier Description
B3	Target analyte detected in calibration blank at or above the method reporting limit.
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H3	Sample was received and/ or analysis requested past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
N1	See case narrative.
R13	MS/MSD RPD exceeded the method acceptance limit. Matrix spike recovery was outside acceptance criteria. Batch precision and accuracy were demonstrated.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 11/1/2021 3:48 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.6º C and 1.8º C.

Receipt Exceptions
The following samples were received outside of holding time:

TDS was received past hold.

CH-CCR-M43-1021 (550-173429-1), CH-CCR-M43-1021 (550-173429-2), CH-CCR-M44D-1021 (550-173429-3), CH-CCR-M44D-1021 (550-173429-3[MS]), CH-CCR-M44D-1021 (550-173429-3[MSD]), CH-CCR-M45-1021 (550-173429-4), CH-CCR-M46-1021 (550-173429-5), CH-CCR-M46-1021 (550-173429-6), CH-CCR-M50-1021 (550-173429-7), CH-CCR-M50-1021 (550-173429-8), CH-CCR-M51-1021 (550-173429-9), CH-CCR-M51-1021 (550-173429-10), CH-CCR-M63-1021 (550-173429-11), CH-CCR-M64-1021 (550-173429-12), CH-CCR-M64-1021 (550-173429-13), CH-CCR-M65-1021 (550-173429-14), CH-CCR-M65-1021 (550-173429-15), CH-CCR-M66-1021 (550-173429-16), CH-CCR-M66-1021 (550-173429-17), CH-CCR-M67-1021 (550-173429-18), CH-CCR-M67-1021 (550-173429-19), CH-CCR-FD05-1021 (550-173429-20), CH-CCR-W123R-1021 (550-173429-21), CH-CCR-W123R-1021 (550-173429-22), CH-CCR-W125-1021 (550-173429-23), CH-CCR-W126R-1021 (550-173429-24), CH-CCR-W126R-1021 (550-173429-25), CH-CCR-FAP-1021 (550-173429-26), CH-CCR-FAP-1021 (550-173429-27) and CH-CCR-FD06-1021 (550-173429-28).

For methods requested for the sample and the MS/MSD are not the same.
The list of 200.7 metals does not match.

CH-CCR-M44D-1021 (550-173429-3), CH-CCR-M44D-1021 (550-173429-3[MS]) and CH-CCR-M44D-1021 (550-173429-3[MSD])

HPLC/IC
Method 300.0: An incorrect volume of spiking solution was inadvertently added to the laboratory control sample and laboratory control sample duplicate (LCS/LCSD), associated with analytical batch 550-258041 by method EPA 300.0. The multi-anion and nitrite spike solutions were added twice to the LCS/LCSD which doubled the final concentration amount. The LCS/LCSD percent recoveries were calculated using the actual amount spiked which achieved results within the acceptance range.

Method 300.0: The results for the source sample and the matrix spike / matrix spike duplicate (MS/MSD) associated with analytical batch 550-258037 for Sulfate by method EPA 300.0 could not be reported due to the analyte concentration in the diluted sample exceeding the low end of the instrument calibration range. As such, reanalysis at a lower dilution was required and no results could be reported for the associated source sample. The results for the batch laboratory control sample / laboratory sample control duplicate (LCS/LCSD) met method acceptance criteria and may be used to verify accuracy and precision. Therefore, the following sample results have been reported and qualified with N1 flags.

CH-CCR-M45-1021 (550-173429-4) and CH-CCR-M46-1021 (550-173429-5)

Job ID: 550-173429-1 (Continued)

Laboratory: Eurofins TestAmerica, Phoenix (Continued)

Method 300.0: An incorrect volume of spiking solution was inadvertently added to the laboratory control sample and laboratory control sample duplicate (LCS/LCSD), associated with analytical batch 550-258215 by method EPA 300.0. The LCS/LCSD percent recoveries were calculated using the actual amount spiked which achieved results within the acceptance range.

Method 300.0: An incorrect volume of spiking solution was inadvertently added to the laboratory control sample and laboratory control sample duplicate (LCS/LCSD), associated with analytical batch 550-258216 by method EPA 300.0. The LCS/LCSD percent recoveries were calculated using the actual amount spiked which achieved results within the acceptance range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The following sample was diluted due to the nature of the sample matrix: CH-CCR-FAP-1021 (550-173429-27). Elevated reporting limits (RLs) are provided.

Method 200.7 Rev 4.4: The continuing calibration blank (CCB) for analytical batch 550-258167 contained Boron above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.7 Rev 4.4: The following sample was diluted due to the nature of the sample matrix: CH-CCR-FAP-1021 (550-173429-26). Elevated reporting limits (RLs) are provided.

Method 200.7 Rev 4.4: The following sample was diluted to bring the concentration of target analytes within the calibration range: CH-CCR-FAP-1021 (550-173429-26). Elevated reporting limits (RLs) are provided.

Method 200.7 Rev 4.4: The continuing calibration blank (CCB) for analytical batch 550-258167 contained Sodium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.7 Rev 4.4: The following samples were diluted to bring the concentration of target analytes within the calibration range: CH-CCR-M46-1021 (550-173429-5) and CH-CCR-M67-1021 (550-173429-18). Elevated reporting limits (RLs) are provided.

Method 200.8 LL: The continuing calibration blank (CCB) for analytical batch 550-258422 contained Arsenic above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.7: Insufficient sample volume was available to perform a second matrix spike/matrix spike duplicate (MS/MSD) associated with 280-556663 for the 200.7_TR method. An LCSD was included instead.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 550-258332 were outside control limits for Dissolved Organic Carbon (DOC). Sample matrix interference and/or non-homogeneity were suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) recoveries and precision were within acceptance limits.

Method SM 5310B: The matrix spike (MS) recovery and the matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 550-258332 were outside control limits for Dissolved organic Carbon (DOC). Sample matrix interference and/or non-homogeneity were suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) recoveries and precision were within acceptance limits.

Method SM 5310B: The matrix spike duplicate (MSD) recovery for analytical batch 550-258432 was outside control limits for Dissolved

Job ID: 550-173429-1 (Continued)

Laboratory: Eurofins TestAmerica, Phoenix (Continued)

Organic Carbon (DOC). Sample matrix interference was suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method SM 5310B: The results for Dissolved Organic Carbon (DOC) by method SM 5310B_DOC_B for the following sample did not meet the method requirement for consecutive injections to have a relative percent difference (RPD) of at least 10 due to matrix interferences; CH-CCR-M43-1021 (550-173429-2) . The sample was analyzed two times with similar results. The result reported had the lowest RPD value between consecutive injections (RPD 12) which was slightly over the method limit. As such, the data has been reported and qualified with an N1 flag.

Method SM 5310B: The method blank for analytical batch 550-258432 contained Dissolved Organic Carbon (DOC) above the method detection limit (MDL). This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

Method SM 5310B: The method blank for analytical batch 550-258433 contained Total Organic Carbon (TOC) above the method detection limit (MDL). This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

CH-CCR-FAP-1021 (550-173429-26)	10/31/21	13:25 Arizona		Water			X	1	AZ Sample

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification
Unconfirmed

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* ________ *Months*

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

1.0 Introduction

Arizona Public Service (APS) collected groundwater Detection and Assessment Monitoring samples to support Coal Combustion Residuals (CCR) Rule Compliance during the 2021 calendar year (the reporting period) at the APS Cholla Power Plant, located near Joseph City in Navajo County, Arizona. This report presents the standard methods used to validate reporting period data and documents the results of the data validation process in summary tables and checklists generated as the samples were collected throughout the year.

2.0 Data Validation Methodology

Wood Environment & Infrastructure Solutions, Inc. (Wood) performed a United States Environmental Protection Agency (EPA) Stage 2A validation on samples collected by APS during the 2021 calendar year. This is equivalent to a Level I data evaluation as defined in the project sampling and analysis plan (SAP). The Stage 2A validation includes review of the quality control (QC) results in laboratory analytical reports and does not include review or validation of the raw analytical data. Data validation activities have been performed in general accordance with:

- EPA, 2004. SW 846 Test Methods for Evaluating Solid Wastes, Update IIIB.
- EPA, 2017. EPA Contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Data Review, EPA 540-R-2017-001.
- Montgomery & Associates, 2015. Groundwater Sampling and Analysis Program, Cholla Power Plant, Joseph City, Arizona. November 30, 2015.

The CLP guidelines were written specifically for the CLP and have been modified for the purposes of data reviews conducted during the reporting period where they differ from method-specific QC requirements.

During each groundwater monitoring round conducted during the reporting period, the laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, LCS/LCS duplicates (LCSDs), or MSs/MS duplicates (MSDs);
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

Appendix A presents data assessment checklists generated for each sample delivery group submitted to the analytical laboratory during the reporting period. The laboratory performing the analyses as well as the methods of analysis are presented in the individual checklists. Table 1 presents a comprehensive listing of reporting period samples and Table 2 summarizes field duplicate detections at concentrations greater than analytical reporting limits.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3.0 Explanation of Data Quality Indicators

Summary explanations of the specific data quality indicators reviewed during data validation are presented below.

3.1 Laboratory Control Sample Recoveries

LCSs are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples it accompanies. LCS recovery is an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 Matrix Spike Recoveries

MSs and MSDs are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 Blank Concentrations

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Laboratory blanks are processed by the laboratory using exactly the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

When target analytes are detected in blanks, analyte concentrations in associated samples less than five times the concentration detected in the blank will be U qualified as being not detected.

3.4 Laboratory Duplicates

Laboratory duplicate analysis verifies acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4.0 Definitions of Data Validation Qualifiers

The following qualifiers may be added to the data during data validation:

J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

R The sample result is rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

U The analyte was analyzed for but was not detected above the reported sample quantitation limit.

UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

5.0 Chain of Custody and Sample Receipt Condition Documentation

Unless otherwise noted in the Data Assessment Checklists included in Appendix A, the samples were received at the laboratories under proper COC, intact, properly preserved, and at temperatures less than the SAP-specified maximum of 6 degrees Celsius.

6.0 Specific Data Validation Findings

Results for groundwater monitoring samples collected in 2021 may be considered usable with the limitations and exceptions summarized in Table 3. The following sections identify requirements used in data assessment. Laboratory-specified limits are noted on the Data Assessment Checklists included in Appendix A.

6.1 Metals By EPA Methods 200.7, 200.8, and 245.1

6.1.1 Holding Times

Samples must be analyzed for metals within the SAP-specified holding time of 28 days for mercury and 180 days for additional metals.

6.1.2 Laboratory Blanks

Target analytes must not be detected in the laboratory blanks associated with the analysis of site samples.

6.1.3 Laboratory Control Sample Accuracy and Precision

LCS and LCSD recoveries must be within the laboratory-specified limits and RPDs between the LCS and LCSD results must be less than the laboratory-specified maximum.

6.1.4 Matrix Spikes/Matrix Spike Duplicates

Laboratories performed MS and MSD analysis on the project samples specified in the Data Assessment Checklists included in Appendix A. MS/MSD recoveries must be within laboratory-specified limits and RPDs between MS and MSD results must be less than the laboratory-specified maximum.

6.1.5 Analytical Sensitivity

RLs for antimony, arsenic, barium, beryllium, cadmium, chromium, mercury, selenium, and thallium must be sufficiently low to meet the National Primary Drinking Water Regulation Maximum Contamination Limits (MCLs). RLs for cobalt, lead, lithium, and molybdenum must be sufficiently low to meet alternative Groundwater Protection Standards (GWPSs).

Boron and calcium are not EPA-regulated analytes in groundwater and it is not possible to evaluate the RLs for these analytes against the National Primary Drinking Water Regulation MCLs.

6.2 Anions by EPA Method 300.0

6.2.1 Holding Times

Samples must be analyzed for anions within the SAP-specified holding time of 28 days.

6.2.2 Laboratory Blanks

Fluoride, chloride, and sulfate must not be detected in the laboratory blanks associated with the analysis of these samples.

6.2.3 Laboratory Control Sample Accuracy and Precision

LCS and LCSD recoveries must be within the laboratory-specified limits and RPDs between the LCS and LCSD results must be less than the laboratory-specified maximum values.

6.2.4 Matrix Spikes/Matrix Spike Duplicates

Laboratories performed MS and MSD analysis on the project samples specified in the Data Assessment Checklists included in Appendix A. Recoveries must be within the laboratory-specified limits and RPDs between MS and MSD results must be less than the laboratory-specified limit.

6.2.5 Laboratory Duplicates

Laboratories performed duplicate analysis on the project samples specified in the Data Assessment Checklists included in Appendix A. The RPDs between duplicate results must be less than the laboratory-specified limit.

6.2.6 Analytical Sensitivity

Fluoride RLs must be sufficiently low to meet the 4 mg/L MCL. Chloride and sulfate are not EPA-regulated analytes in groundwater and it is not possible to evaluate the RLs for these analytes against the Primary Drinking Water Regulation MCLs.

There are applicable CCR Groundwater Monitoring Program Background Threshold Values (BTVs) for fluoride, chloride, and sulfate for the site. Analytical sensitivity must also be evaluated for these site-specific comparison criteria.

6.3 Total Dissolved Solids by SM 2540C

6.3.1 Holding Times

All samples must be analyzed for TDS within the SAP-specified holding time of 7 days.

6.3.2 Laboratory Blanks

TDS must not be detected in the laboratory blanks at concentrations above the reporting limit.

6.3.3 Laboratory Control Sample Accuracy and Precision

LCS and LCSD recoveries must be within the laboratory-specified limits and RPDs between the LCS and LCSD results must be less than the laboratory-specified maximum values.

6.3.4 Laboratory Duplicates

Laboratories performed duplicate analysis for TDS on the project samples specified in the Data Assessment Checklists included in Appendix A. RPDs between primary sample and laboratory duplicate results must be less than the laboratory-specified limit.

6.4 pH by SM 4500B

6.4.1 Holding Times

All samples must be analyzed for pH within 15 minutes of sample collection.

6.4.2 Laboratory Control Sample Accuracy and Precision

LCS recoveries must be within the laboratory-specified limits.

6.4.3 Laboratory Duplicates

Laboratories performed duplicate analysis for pH on the project samples specified in the Data Assessment Checklists included in Appendix A. RPDs between primary sample and laboratory duplicate results must be less than the laboratory-specified limit.

6.5 General Chemistry by EPA Method 350.1, SM 2320B, and SM 5310B

6.5.1 Holding Times

Samples must be analyzed for ammonia, total organic carbon (TOC), and dissolved organic carbon (DOC) within 28 days of sample collection. Samples must be analyzed for alkalinity within 14 days of sample collection.

6.5.2 Laboratory Control Sample Accuracy and Precision

LCS recoveries must be within the laboratory-specified limits.

6.5.3 Laboratory Duplicates

Laboratories performed duplicate analysis on the project samples specified in the Data Assessment Checklists included in Appendix A. RPDs between primary sample and laboratory duplicate results must be less than the laboratory-specified limit.

6.6 Radium by EPA Methods 903.0 and 904.0

6.6.1 Holding Time

All samples must be analyzed for radium within the EPA-recommended holding time of 6 months.

6.6.2 Laboratory Blanks

Radium must not be detected in the laboratory blanks at concentrations above the reporting limit.

6.6.3 Laboratory Control Sample Accuracy and Precision

LCS and LCSD recoveries must be within laboratory-specified limits.

6.6.4 Carrier Accuracy

Carrier recoveries must be within the laboratory-specified limits.

6.6.5 Analytical Sensitivity

Total radium RLs must be sufficiently low to meet the MCL of 5 picocuries per liter. Pending development of applicable CCR Groundwater Monitoring Program BTVs and/or GPSs for the site, analytical sensitivity must also be evaluated for these site-specific comparison criteria.

7.0 Field Duplicates

APS collected field duplicate samples of the specified field original samples as specified in Table 1. Target analyte detections are summarized in Table 2. Precision values must be less than the SAP-specified maximum of 20%, or the differences between the detected concentrations must be less than the RLs.

8.0 Summary and Conclusions

Data are usable with the addition of qualifiers as presented in Table 3. Considerably more qualified data is included for the 2021 reporting period data when compared to historical data validation findings.

10.0 Limitations

This report was prepared exclusively for Arizona Public Service by Wood Environment & Infrastructure Solutions, Inc. The quality of information, conclusions, and estimates contained herein is consistent with the level of effort involved in Wood services and based on: i) information available at the time of preparation, ii) data supplied by outside sources, and iii) the assumptions, conditions, and qualifications set forth in this report. This data validation report is intended to be used by Arizona Public Service for the Cholla Power Plant site only, subject to the terms and conditions of its contract with Wood. Any other use of, or reliance on, this report by any third party is at that party's sole risk.

Sulfate	4.0 mg/L	370	370	0.0%	

Notes:

± RL = the difference between analyte concentrations is less than the reporting limit, indicating acceptable sampling and analytical precisions.

FD = Imprecision between primary and field duplicate results.

mg/L = milligrams per liter

NC = not calculable

pCi/L = picoCuries per liter

SU = standard units

Qualifier Definitions:

J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

CH-CCR-M61-1021	J173427-1	Sulfate (re-analysis duplicate)	390 mg/L	J HT
CH-CCR-FD01-1021	J173427-1	Sulfate (re-analysis)	400 mg/L	J HT
CH-CCR-FD01-1021	J173427-1	Sulfate (re-analysis duplicate)	380 mg/L	J HT

Notes:
mg/L = milligrams per liter
S.U. = standard units
pCi/L = picoCuries per liter

Qualifiers:
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

Reason Codes:
DL = The detected concentrations is less than the reporting limit.
FD = Imprecision between primary and field duplicate results. Potential sampling and/or anaytical imprecision.
HD = High laboratory duplicte relative percent difference.
HL = High LCS recovery. Result may be biased high.
HM = High matrix spike recovery. Result may be biased high.
HT = The maximum recommended hold time was exceeded and the result should be considered an estimated value.
LM = Low matrix spike recovery. Result may be biased low.
MB = The same analyte was detcted in the field sample and its associated blank and the concentration detcted in the sample is less than five times the concentration detected in the blank.
MD = Imprecision between MS and MSD results.
NQ = There was no laboratory control sample associated with this result.
TD = Dissolved result is significantly higher than the total result.

CH-CCR-FD02-0421	04/14/21 08:08	66555	Field duplicate of CH-CCR-M56-0421

Analytical Methods:

Analyte	Analyte Group	Method
Radium 226, Radium 228, Total Radium	Radionuclides	HPGE

Qualifier Definitions:

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Sample Receipt Condition:

COC Signed and Complete? Yes No
If No, provide details.

Sample Login Matched COC? Yes No

If no, provide details.

Sample receipt temperature ≤ 6°C? Yes No N/A

If no, provide details.

1. Samples analyzed for metals and radionuclides within 180 days of sampling?

   Yes No N/A

2. Samples analyzed for mercury, ammonia, chloride, fluoride, nitrate/nitrite, sulfate, TOC, and/or DOC within 28 days of sampling?

   Yes No N/A

3. Samples Analyzed for alkalinity within 14 days of sampling? Yes No N/A

4. Samples analyzed for total dissolved solids within 7 days of sampling?

   Yes No N/A

5. Samples analyzed for pH within 15 minutes of sampling? Yes No N/A

If No:

Sample ID	Analysis	Time Between Collection and Analysis	Effect on Data Usability

6. Target analytes detected in the blanks? Yes No N/A

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection	Effect on Data Usability

7. LCS recoveries within laboratory-specified limits? Yes No N/A

If No:

Analyte	Recovery	QC Limits	Affected Samples	Effect on Data Usability

8. MS performed on a project-specific sample? Yes No N/A

If Yes:

Spiked Sample ID	Spiked Analyte(s)

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes No N/A

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability

9. Field duplicate collected? Yes No

If Yes:

Parent Sample	Field Duplicate
CH-CCR-M56-0421	CH-CCR-FD02-0421
CH-CCR-M53-0421	CH-CCR-FD03-0421
CH-CCR-BAPTD-0421	CH-CCR-FD04-0421
CH-CCR-M44D-0421	CH-CCR-FD05-0421

b. Are RPDs between primary and duplicate results ≤ 20% or are differences between analyte concentrations ≤ the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability

Analyte	Average Reporting Limit	Primary Result	Duplicate Result	RPD	Notes
Samples CH-CCR-M56-0421 and CH-CCR-FD02-0421					
No detected analytes					
Samples CH-CCR-M53-0421 and CH-CCR-FD03-0421					
No detected analytes					
Samples CH-CCR-BAPTD-0421 and CH-CCR-FD04-0421					
No detected analytes					
Samples CH-CCR-M44D-0421 and CH-CCR-FD05-0421					
Radium 226	0.4 pCi/L	1.9 ± 0.2	1.6 ± 0.2	17%	
Radium 228	0.7 pCi/L	0.9 ± 0.3	1.5 ± 0.4	50%	± RL
Total Radium	0.7 pCi/L	2.8 ± 0.4	3.1 ± 0.4	10%	

Note:

pCi/L = picoCuries per liter
± RL = The difference between analyte concentrations is less than the reporting limit, indicating acceptable sampling and analytical precision.

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No N/A

If Yes:

Sample ID	Analysis

c. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes No N/A

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes No

If no, provide details.

Sample receipt temperature ≤ 6°C? Yes No N/A

If no, provide details.

Cholla CCR Data Review

1. Samples analyzed for metals and radionuclides within 180 days of sampling?

   Yes No N/A

2. Samples analyzed for mercury, ammonia, chloride, fluoride, nitrate/nitrite, sulfate, TOC, and/or DOC within 28 days of sampling?

   Yes No N/A

3. Samples Analyzed for alkalinity within 14 days of sampling? Yes No N/A

4. Samples analyzed for total dissolved solids within 7 days of sampling?

   Yes No N/A

5. Samples analyzed for pH within 15 minutes of sampling? Yes No N/A

If No:

Sample ID	Analysis	Time Between Collection and Analysis	Effect on Data Usability

6. Target analytes detected in the blanks? Yes No N/A

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection	Effect on Data Usability

7. LCS recoveries within laboratory-specified limits? Yes No N/A

If No:

Analyte	Recovery	QC Limits	Affected Samples	Effect on Data Usability

8. MS performed on a project-specific sample? Yes No N/A

If Yes:

Spiked Sample ID	Spiked Analyte(s)

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes No N/A

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability

9. Field duplicate collected? Yes No

If Yes:

Parent Sample	Field Duplicate

b. Are RPDs between primary and duplicate results ≤ 20% or are differences between analyte concentrations ≤ the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability

Analyte	Average Reporting Limit	Primary Result	Duplicate Result	RPD	Notes

Note:

pCi/L = picoCuries per liter
± RL = The difference between analyte concentrations is less than the reporting limit, indicating acceptable sampling and analytical precision.

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No N/A

If Yes:

Sample ID	Analysis

c. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes No N/A

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes No

Analytical Methods:

Analyte	Analyte Group	Method
Chloride, Fluoride, Nitrate/Nitrite, Sulfate	Anions	EPA 300.0
Beryllium, Boron, Calcium, Iron, Lithium, Magnesium, Manganese, Potassium, Sodium	Metals	EPA 200.7
Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium	Metals	EPA 200.8
Mercury	Metals	EPA 245.1
Ammonia	General Chemistry	EPA 350.1
Alkalinity	General Chemistry	SM 2320B
Total Dissolved Solids	General Chemistry	SM 2540C
pH	General Chemistry	SM 4500 H^+ B
Total or Dissolved Organic Carbon	General Chemistry	SM 5310B

Qualifier Definitions:

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Sample Receipt Condition:

COC Signed and Complete? Yes No
If No, provide details.

Sample Login Matched COC? Yes No

If no, provide details.

Sample receipt temperature ≤ 6°C? Yes No

If no, provide details.

Two of the five coolers were received at the laboratory at temperatures of 6.3 and 6.4 °C. Wood did not qualify any data based on the minor temperature exceedances because the temperatures rounded to 6 °C.

Cholla CCR Data Review

1. Samples analyzed for metals within 180 days of sampling? Yes No

2. Samples analyzed for mercury, ammonia, chloride, fluoride, nitrate/nitrite, sulfate, TOC, and/or DOC within 28 days of sampling?

CH-CCR-TanWash-0421	pH	5 days, 8 hours, 20 minutes	J-HT
CH-CCR-FD04-0421	pH	4 days, 6 hours, 45 minutes	J-HT

Note:

HT = Method-recommended maximum hold time was exceeded.

6. Target analytes detected in the blank? Yes No

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection	Effect on Data Usability
Beryllium	0.0000900 mg/L		
Boron	0.00313 mg/L		
Calcium	0.0194 mg/L		
Manganese	0.000460 mg/L		
Sodium	0.435 mg/L		
Beryllium	0.000110 mg/L		
Potassium	0.200 mg/L		
Manganese	0.00100 mg/L		
Molybdenum	0.000261 mg/L		
Thallium	0.0000240 mg/L		
Cobalt	0.0000800 mg/L	CH-CCR-W309-0421 (Dissolved)	U-MB

Note:

MB = The analyte was detected in the laboratory blank, and the concentration detected in the sample is less than five times the concentration detected in the blank.

7. LCS recoveries within laboratory-specified limits? Yes No

If No:

Analyte	Recovery	Affected Samples

8. MS performed on a project-specific sample? Yes No

If Yes:

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-FD04-0421	Chloride, Fluoride, Sulfate
CH-CCR-M52-0421	Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Iron, Lead, Manganese, Molybdenum, Selenium, Thallium
CH-CCR-M53-0421	DOC, Mercury
CH-CCR-M55-0421	Arsenic, Cobalt
CH-CCR-W302-0421	Ammonia
CH-CCR-W305-0421	Chloride, DOC, Fluoride, Sulfate
CH-CCR-W309-0421	Iron, Manganese

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes No

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability
CH-CCR-M53-0421 (CH-CCR-FD03-0421)	DOC	88%, 85%	90 to 110%	J-LM
CH-CCR-W305-0421	Chloride, Sulfate	144% , 136%	80 to 120%	J-HM
CH-CCR-W305-0421	DOC	85%, 81%	90 to 110%	J-LM

Notes:

HM = High matrix spike recovery. Result may be biased high.
LM = Low matrix spike recovery. Result may be biased low.

9. Field duplicate collected? Yes No

If Yes:

Parent Sample	Field Duplicate
CH-CCR-M53-0421	CH-CCR-FD03-0421
CH-CCR-BAPTD-0421	CH-CCR-FD04-0421

b. Are RPDs between primary and duplicate results ≤ 20% or are differences between analyte concentrations ≤ the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability
CH-CCR-M53-0421	CH-CCR-FD03-0421	Ammonia	67%	J-FD
CH-CCR-BAPTD-0421	CH-CCR-FD04-0421	Lead	84%	J-FD

Note:

FD = Imprecision between primary sample and field duplicate results.

Analyte	Average Reporting Limit		Primary Result		Duplicate Result		RPD	Notes
Samples CH-CCR-M53-0421 and CH-CCR-FD03-0421								
Chloride	400	mg/L	2,400		2,200		8.7%

Cholla CCR Data Review

1. Samples analyzed for metals within 180 days of sampling? Yes No

2. Samples analyzed for mercury, ammonia, chloride, fluoride, nitrate/nitrite, sulfate, TOC, and/or DOC within 28 days of sampling?

   Yes No N/A

3. Samples Analyzed for alkalinity within 14 days of sampling? Yes No N/A

4. Samples analyzed for total dissolved solids within 7 days of sampling?

   Yes No N/A

5. Samples analyzed for pH within 15 minutes of sampling? Yes No N/A

If No:

Sample ID	Analysis	Time Between Collection and Analysis	Effect on Data Usability
CH-CCR-M43-0421	pH	7 days, 5 hours, 16 minutes	J-HT
CH-CCR-M44D-0421	pH	5 days, 10 hours, 40 minutes	J-HT
CH-CCR-M45-0421	pH	7 days, 6 hours, 41 minutes	J-HT
CH-CCR-M46-0421	pH	7 days, 3 hours, 2 minutes	J-HT
CH-CCR-M50-0421	pH	6 days, 4 hours, 43 minutes	J-HT
CH-CCR-M51-0421	pH	6 days, 4 hours, 1 minute	J-HT
CH-CCR-M63-0421	pH	6 days, 9 hours, 1 minute	J-HT
CH-CCR-M64-0421	pH	6 days, 2 hours, 42 minutes	J-HT
CH-CCR-M65-0421	pH	7 days, 4 hours, 13 minutes	J-HT
CH-CCR-M66-0421	pH	6 days, 11 hours, 5 minutes	J-HT
CH-CCR-M67-0421	pH	7 days, 2 hours, 5 minutes	J-HT
CH-CCR-W123-0421	pH	6 days, 7 hours, 40 minutes	J-HT
CH-CCR-W125-0421	pH	6 days, 5 hours, 37 minutes	J-HT
CH-CCR-W126-0421	pH	6 days, 10 hours, 15 minutes	J-HT
CH-CCR-GeronC-0421	pH	6 days, 7 hours	J-HT
CH-CCR-GeronD-0421	pH	6 days, 6 hours, 18 minutes	J-HT
CH-CCR-HuntB-0421	pH	6 days, 9 hours, 50 minutes	J-HT
CH-CCR-FD05-0421	pH	5 days, 10 hours, 40 minutes	J-HT
CH-CCR-M50-0421	TDS	11 days	J-HT

Note:

HT = Method-recommended maximum hold time was exceeded.

6. Target analytes detected in the blanks? Yes No

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection	Effect on Data Usability
Beryllium	0.000110 mg/L	CH-CCR-M44D-0421, CH-CCR-M63-0421	U-MB
Potassium	0.200 mg/L		
Sodium	0.201 mg/L		
Boron	0.00294 mg/L		
Calcium	0.0721 mg/L		
Iron	0.0113 mg/L		
Magnesium	0.0485 mg/L		
Manganese	0.000790 mg/L		
Sodium	0.576 mg/L		
Manganese	0.00100 mg/L		
Thallium	0.0000240 mg/L		
Antimony	0.000186 mg/L	CH-CCR-FD05-0421, CH-CCR-HuntB-0421	U-MB
Arsenic	0.000328 mg/L		
Cobalt	0.0000750 mg/L		

Note:

MB = The analyte was detected in the associated laboratory blank, and the concentration detected in the sample was less than five times the concentration detected in the blank.

7. LCS recoveries within laboratory-specified limits? Yes No

If No:

Analyte	Recovery	QC Limits	Affected Samples	Effect on Data Usability
Barium	122%, 125%	85 to 115%	CH-CCR-HuntB-0421 CH-CCR-FD05-0421	J-HL

Note:

HL = High laboratory control sample recovery. Result may be biased high.

8. MS performed on a project-specific sample? Yes No

If Yes:

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-M43-0421	Chloride, Fluoride, Sulfate
CH-CCR-M44D-0421	Antimony, Arsenic, Barium, Beryllium, Boron, Cadmium, Calcium, Chloride, Chromium, Cobalt, Fluoride, Lead, Mercury, Molybdenum, Selenium, Sulfate, Thallium
CH-CCR-M45-0421, CH-CCR-M65-0421	Lithium
CH-CCR-M46-0421	Chloride, Fluoride, Lithium, Sulfate
CH-CCR-M64-0421	Ammonia, DOC

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes No

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability
CH-CCR-M44D-0421 (CH-CCR-FD05-0421)	Calcium	65%, MSD	70 to 130%	NA4
CH-CCR-M64-0421	DOC	77%, MSD	90 to 110%	J-LM

Notes:

LM = Low matrix spike recovery. Result may be biased low.
NA4 = The background concentration in the unspiked native sample is greater than four times the spike concentration and it is not possible to assess data usability for this analyte in this sample based on MS recovery.

9. Field duplicate collected? Yes No

If Yes:

Parent Sample	Field Duplicate
CH-CCR-M44D-0421	CH-CCR-FD05-0421

b. Are RPDs between primary and duplicate results ≤ 20% or are differences between analyte concentrations ≤ the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability

Note:

FD = Imprecision between primary sample and field duplicate results.

Analyte	Average Reporting Limit		Primary Result		Duplicate Result		RPD	Notes
Samples CH-CCR-M44D-0421 and CH-CCR-FD05-0421								
Chloride	400	mg/L	1,000		1,000		0.0%	
Fluoride	0.80	mg/L	0.77	J	1		2.6%	
Sulfate	400	mg/L	330		320		3.1%	
Beryllium	0.0010	mg/L	0.00040	J	0.0010	U	NC	± RL
Lithium	0.020	mg/L	0.040		0.039		2.5%	
Boron	0.050	mg/L	0.25		0.29		14.8%	
Calcium	2.0	mg/L	91		87		4.5%	
Antimony	0.0020	mg/L	0.0020	U	0.00023	J	NC	± RL
Arsenic	0.0010	mg/L	0.0014		0.0023		48.6%	± RL
Barium	0.0010	mg/L	0.021		0.020		4.9%	
Molybdenum	0.0010	mg/L	0.0029		0.0027		7%	
Total Dissolved Solids	40	mg/L	2,300		2,300		0%	
pH	1.7	SU	7.0		7.0		0.0%	

Note:

± RL = The difference between analyte concentrations is less than the reporting limit, indicating acceptable sampling and analytical precision.

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No

If Yes:

Sample ID	Analysis
CH-CCR-M44D-0421	pH, TDS
CH-CCR-M63-0421	TDS
CH-CCR-FD05-0421	pH

c. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes No N/A

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes No

Cholla CCR Data Review

Laboratory Name:	Eurofins Environment Testing America, Phoenix		
Sample Delivery Group:	550-162158-1	**Review Date:**	6 May 2021
Validator's Name:	Marie Bevier	**Reviewed By:**	Denise King

Sample Summary:

Field Sample Identification	Collection Date and Time	Laboratory Sample Identification	Notes
CH-CCR-M56-0421	4/14/2021 8:08	550-162158-1	
CH-CCR-M57-0421	4/14/2021 9:06	550-162158-2	
CH-CCR-M58-0421	4/14/2021 9:45	550-162158-3	
CH-CCR-M62-0421	4/14/2021 7:24	550-162158-4	
CH-CCR-FD02-0421	4/14/2021 8:08	550-162158-5	Field duplicate of CH-CCR-M56-0421

Analytical Methods:

Analyte	Analyte Group	Method
Chloride, Fluoride, Sulfate	Anions	EPA 300.0
Beryllium, Boron, Calcium, Lithium	Metals	EPA 200.7
Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium	Metals	EPA 200.8
Mercury	Metals	EPA 245.1
Total Dissolved Solids	General Chemistry	SM 2540C
pH	General Chemistry	SM 4500 H^+ B

Qualifier Definitions:

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Sample Receipt Condition:

CH-CCR-P226C-0621	pH	7 days, 3 hours, 44 minutes	J-HT
CH-CCR-P226D-0621	pH	7 days, 3 hours, 32 minutes	J-HT
CH-CCR-P226E-0621	pH	7 days, 3 hours, 15 minutes	J-HT
CH-CCR-P226G-0621	pH	7 days, 2 hours, 40 minutes	J-HT
CH-CCR-P226H-0621	pH	7 days, 2 hours, 14 minutes	J-HT

Note:

HT = Maximum hold time exceeded.

5. Target analytes detected in the blank? Yes No

If Yes:

Detected Analyte	Concentration	Samples with detected concentrations less than 5 times the blank detection
Calcium	0.0244 mg/L	
Manganese	0.000700 mg/L	
Manganese	0.00237 mg/L	
Antimony	0.000053 mg/L	CH-CCR-P226A-0621, CH-CCR-P226B-0621, CH-CCR-P226C-0621, CH-CCR-P226D-0621, CH-CCR-P226H-0621 (U-MB)
Lead	0.000253 mg/L	
Thallium	0.000039 mg/L	CH-CCR-P226A-0621, CH-CCR-P226B-0621, CH-CCR-P226C-0621, CH-CCR-P226D-0621, CH-CCR-P226G-0621, CH-CCR-P226H-0621 (U-MB)

Note:

MB = The analyte was detected in the associated laboratory blank and the concentration detected in the sample is less than five times the concentration detected in the blank.

6. LCS recoveries within laboratory-specified limits? Yes No

If No:

Analyte	Recovery	Affected Samples

MS performed on a project-specific sample? Yes No

If Yes:

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-P226A-0621	Nitrate, Chloride, Fluoride, Sulfate, Mercury

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes No

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability

7. Field duplicate collected? Yes No

If Yes:

Parent Sample	Field Duplicate

a. Is the RPD between primary and duplicate results ≤ 20% or is the difference between analyte concentrations ≤ the reporting limit?

Yes No N/A

8. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No

If Yes:

Sample ID	Analysis
CH-CCR-P226A-0621	Alkalinity
CH-CCR-P226B-0621	Total dissolved solids

a. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes No N/A

If No:

Sample ID	Analyte	Effect on Data Usability

9. Are total analyte results greater than or equal to dissolved results?

Yes No N/A

If No:

Sample ID	Analyte	Total Result	Dissolved Result	Effect on Data Usability
CH-CCR-P226B-0621	Iron	0.056 mg/L	0.060 mg/L	None
CH-CCR-P226B-0621	Cobalt	0.013 mg/L	0.014 mg/L	None
CH-CCR-P226B-0621	Manganese	4.5 mg/L	4.6 mg/L	None
CH-CCR-P226E-0621	Cobalt	0.0093 mg/L	0.015 mg/L	J-TD
CH-CCR-P226G-0621	Manganese	1.5 mg/L	2.4 mg/L	J-TD
CH-CCR-P226G-0621	Cobalt	0.0031 mg/L	0.015 mg/L	J-TD
CH-CCR-P226H-0621	Manganese	0.014 mg/L	0.022 mg/L	None

Notes:

mg/L = milligrams per liter

TD = Dissolved result is significantly higher than the total result.

10. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes No

Analyte	List	MCL	Alternative GWPS	Units
Antimony	Appendix IV	0.006	--	mg/L
Arsenic	Appendix IV	0.010	--	mg/L

Analytical Methods:

Analyte	Analyte Group	Method
Radium 226, Radium 228, Total Radium	Radionuclides	HPGE

Qualifier Definitions:

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Sample Receipt Condition:

COC Signed and Complete? Yes No
If No, provide details.

Sample Login Matched COC? Yes No

If no, provide details.

Sample receipt temperature ≤ 6°C? Yes No N/A

If no, provide details.

Cholla CCR Data Review

1. Samples analyzed for metals and radionuclides within 180 days of sampling?

Yes No N/A

2. Samples analyzed for mercury, ammonia, chloride, fluoride, nitrate/nitrite, sulfate, TOC, and/or DOC within 28 days of sampling?

Yes No N/A

3. Samples Analyzed for alkalinity within 14 days of sampling? Yes No N/A

4. Samples analyzed for total dissolved solids within 7 days of sampling?

Yes No N/A

5. Samples analyzed for pH within 15 minutes of sampling? Yes No N/A

If No:

Sample ID	Analysis	Time Between Collection and Analysis	Effect on Data Usability

6. Target analytes detected in the blanks? Yes No N/A

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection	Effect on Data Usability

7. LCS recoveries within laboratory-specified limits? Yes No N/A

If No:

Analyte	Recovery	QC Limits	Affected Samples	Effect on Data Usability

8. MS performed on a project-specific sample? Yes No N/A

CH-CCR-CR1R-1021	CH-CCR-FD08-1021

b. Are RPDs between primary and duplicate results ≤ 20% or are differences between analyte concentrations ≤ the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability
CH-CCR-W125-1021	CH-CCR-FD05-1021	Radium 226	35%	J-FD
CH-CCR-W125-1021	CH-CCR-FD05-1021	Radium-228	71%	J-FD
CH-CCR-W125-1021	CH-CCR-FD05-1021	Total Radium	52%	J-FD
CH-CCR-M44D-1021	CH-CCR-FD06-1021	Radium 226	31%	J-FD

Note:

FD = Imprecision between primary and field duplicate results.

Analyte	Average Reporting Limit	Primary Result	Duplicate Result	RPD	Notes
Samples CH-CCR-CR1R-1021 and CH-CCR-FD02-1021					
Radium 226	0.4 pCi/L	0.5 ± 0.2	0.4 U	NC	± RL
Total Radium	0.6 pCi/L	0.5 ± 0.2	0.6 U	NC	± RL
Samples CH-CCR-MW79-1021 and CH-CCR-FD03-1021					
Radium 226	0.4 pCi/L	0.4 U	0.4 ± 0.2	NC	± RL
Total Radium	0.6 pCi/L	0.6 U	0.4 ± 0.2	NC	± RL
Samples CH-CCR-W307R-1021 and CH-CCR-FD04-1021					
No target analyte detections					
Samples CH-CCR-W125-1021 and CH-CCR-FD05-1021					
Radium 226	0.4 pCi/L	1.4 ± 0.5	2.0 ± 0.3	35%	J-FD
Radium 228	0.6 pCi/L	0.9 ± 0.7	1.9 ± 0.4	71%	J-FD
Total Radium	0.6 pCi/L	2.3 ± 0.9	3.9 ± 0.5	52%	J-FD
Samples CH-CCR-M44D-1021 and CH-CCR-FD06-1021					
Radium 226	0.4 pCi/L	3.4 ± 0.3	2.5 ± 0.3	31%	J-FD
Radium 228	0.6 pCi/L	1.6 ± 0.4	1.8 ± 0.3	12%	
Total Radium	0.6 pCi/L	5.0 ± 0.5	4.3 ± 0.4	15%	
Samples CH-CCR-M44D-1021 and CH-CCR-FD07-1021					
Radium 226	0.4 pCi/L	2.7 ± 0.3	3.2 ± 0.3	17%	
Radium 228	0.6 pCi/L	1.5 ± 0.3	1.5 ± 0.4	0.0%	
Total Radium	0.6 pCi/L	4.2 ± 0.4	4.7 ± 0.5	11%	
Samples CH-CCR-CR1R-1021 and CH-CCR-FD08-1021					
Radium 228	0.6 pCi/L	0.6 U	0.7 ± 0.3	NC	± RL
Total Radium	0.6 pCi/L	0.6 U	0.7 ± 0.3	NC	± RL

Notes:

± RL = The difference between analyte concentrations is less than the reporting limit, indicating acceptable sampling and analytical precision.
NC = not calculable
pCi/L = picoCuries per liter

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No N/A

If Yes:

6. Target analytes detected in the blanks? Yes No N/A

If Yes:

Detected Analyte	**Concentration**	**Samples with concentrations less than 5 times the blank detection**	**Effect on Data Usability**
Dissolved Manganese	0.000470 mg/L		
Arsenic	0.000495 mg/L	CH-CCR-M44D-1021, CH-CCR-M64-1021, CH-CCR-M65-1021,CH-CCR-M66-1021, CH-CCR-W126-1021	U-MB
Total Organic Carbon	0.322 mg/L		
Dissolved Organic Carbon	0.357 mg/L	CH-CCR-M43-1021	U-MB

Note: MB = The same analyte was detected in the field sample and its associated blank.

7. LCS recoveries within laboratory-specified limits? Yes No N/A

If No:

Analyte	**Recovery**	**QC Limits**	**Affected Samples**	**Effect on Data Usability**

8. MS performed on a project-specific sample? Yes No N/A

If Yes:

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-M44D-1021	Chloride, Fluoride, Sulfate, Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium, Beryllium, Lithium, Boron, Calcium, Mercury.
CH-CCR-M67-1021	Fluoride
CH-CCR-M66-1021	Nitrate/Nitrite
CH-CCR-M43-1021	Dissolved Arsenic, Dissolved Cobalt, Ammonia.
CH-CCR-M64-1021	Total Organic Carbon

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes No N/A

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability
CH-CCR-M43-1021	Ammonia	115%, 111%	90-110%	J-HM
CH-CCR-M64-1021	Dissolved Organic Carbon	53%	90-110%	J-LM
CH-CCR-M64-1021	Dissolved Organic Carbon	42%	0-20%	J-HD

Note:
HM = High matrix spike recovery. Result may be biased high.
LM = Low matrix spike recovery. Result may be biased low.
HD = High laboratory duplicate RPD.

9. Field duplicate collected? Yes (circled) No

If Yes:

Parent Sample	Field Duplicate
CH-CCR-W125-1021	CH-CCR-FD05-1021
CH-CCR-M44D-1021	CH-CCR-FD06-1021

b. Are RPDs between primary and duplicate results ≤ 20% or are differences between analyte concentrations ≤ the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability
CH-CCR-W125-1021	CH-CCR-FD05-1021	Arsenic	29%	J-FD
CH-CCR-M44D-1021	CH-CCR-FD06-1021	Sulfate	21.6%	J-FD
CH-CCR-M44D-1021	CH-CCR-FD06-1021	Boron	56.7%	J-FD
CH-CCR-M44D-1021	CH-CCR-FD06-1021	Arsenic	> RL	J/UJ-FD
CH-CCR-M44D-1021	CH-CCR-FD06-1021	Molybdenum	41.5%	J-FD

Note: FD = Imprecision between primary and field duplicate results.

> RL = The difference between detected and non-detected results was greater than the reporting limit.

Analyte	Average Reporting Limit		Primary Result		Duplicate Result		RPD	Notes
Samples CH-CCR-W125-1021 and CH-CCR-FD05-1021								
Chloride	400	mg/L	750		760		1.3%	
Fluoride	0.80	mg/L	0.56	J	0.53	J	5.5%	
Sulfate	100	mg/L	310		380		20%	± RL
Lithium	0.020	mg/L	0.026		0.026		0.0%	
Boron	0.050	mg/L	0.18		0.16		12%	
Calcium	2.0	mg/L	120		120		0.0%	
Antimony	0.0010	mg/L	0.000066	J	0.000096	J	37%	± RL
Arsenic	0.00050	mg/L	0.0051		0.0038		29%	J-FD
Barium	0.00050	mg/L	0.022		0.022		0.0%	
Cobalt	0.00050	mg/L	0.0012		0.00072		50%	± RL
Molybdenum	0.00050	mg/L	0.0028		0.0025		11%	
Selenium	0.00050	mg/L	0.00011	J	0.00050	U	NC	± RL
Thallium	0.00010	mg/L	0.000015	J	0.00010	U	NC	± RL
Total Dissolved Solids	20	mg/L	1,700		1,600		6.1%	
pH	1.7	SU	7.7		7.7		0.0%	

Analyte	Average Reporting Limit		Primary Result		Duplicate Result		RPD	Notes
Samples CH-CCR-M44D-1021 and CH-CCR-FD06-1021								
Chloride	400	mg/L	1,100		1,100		0.0%	
Fluoride	0.80	mg/L	0.76	J	0.66	J	14%	
Sulfate	20	mg/L	330		410		22%	J-FD
Lithium	0.020	mg/L	0.04		0.04		5.0%	
Boron	0.050	mg/L	0.24		0.43		57%	J-FD
Calcium	2.0	mg/L	84		83		1.2%	
Antimony	0.0010	mg/L	0.000071	J	0.000069	J	2.9%	
Arsenic	0.00050	mg/L	0.0016	U	0.00093		NC	UJ/J-FD
Barium	0.00050	mg/L	0.020		0.021		4.9%	
Cadmium	0.00010	mg/L	0.000043	J	0.00010	U	NC	± RL
Chromium	0.0010	mg/L	0.00010	U	0.00044	J	NC	± RL
Molybdenum	0.00050	mg/L	0.0021		0.0032		42%	J-FD
Selenium	0.00050	mg/L	0.00019	J	0.00050	U	NC	± RL

Notes:

FD = Imprecision between primary and field duplicate results.
mg/L = milligrams per liter
± RL = The difference between analyte concentrations is less than the reporting limit, indicating acceptable sampling and analytical precision.
SU = standard pH units

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No N/A

If Yes:

Sample ID	Analysis
CH-CCR-M64-1021	Total Dissolved Solids, pH
CH-CCR-W123R-1021	pH

c. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes No N/A

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes No

Cholla CCR Data Review

Laboratory Name:	Eurofins Environment Testing America		
Sample Delivery Group:	550-174639	Review Date:	12/15/2021
Validator's Name:	Grace Graner	Reviewed By:	Marie Bevier

Sample Summary:

Field Sample Identification	Collection Date and Time	Laboratory Sample Identification	Notes
CH-CCR-M54-1121	11/19/21 13:46	550-174639-1	
CH-CCR-M59-1121	11/19/21 11:46	550-174639-2	
CH-CCR-M60-1121	11/19/21 13:07	550-174639-3	
CH-CCR-M61-1121	11/19/21 12:26	550-174639-4	
CH-CCR-FD01-1121	11/19/21 12:26	550-174639-5	Field Duplicate of CH-CCR-M61-1121

Analytical Methods:

Analyte	Analyte Group	Method
Total Dissolved Solids	General Chemistry	SM 2540C

Qualifier Definitions:

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Cobalt	0.000108 mg/L	CH-CCR-W309-1021, CH-CCR-W317-1021	U-MB
Arsenic	0.000329 mg/L	CH-CCR-BAPTD-1021, CH-CCR-W308-1021, CH-CCR-W309-1021, CH-CCR-W314-1021	U-MB
Chromium	0.00498 mg/L	CH-CCR-FD04-1021	U-MB
Arsenic, Dissolved	0.000367 mg/L	CH-CCR-TWX8-1021, CH-CCR-W314-1021	U-MB
Total Organic Carbon	0.322 mg/L	CH-CCR-Petroglyph-1021, CH-CCR-TWX3-1021, CH-CCR-TWX5-1021, CH-CCR-TWX6-1021, CH-CCR-TWX8-1021	U-MB
Dissolved Organic Carbon	0.357 mg/L	CH-CCR-FD04-1021, CH-CCR-M53-1021, CH-CCR-TWX6-1021, CH-CCR-TWX7-1021, CH-CCR-TWX8-1021	U-MB

Note:

MB = The analyte was detected in the associated laboratory blank, and the concentration detected in the sample was less than five times the concentration detected in the blank.

7. LCS recoveries within laboratory-specified limits? Yes No

If No:

Analyte	Recovery	QC Limits	Affected Samples	Effect on Data Usability

8. MS performed on a project-specific sample? Yes No

If Yes:

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-BAP-1021	Chloride, Fluoride, Sulfate
CH-CCR-FD04-1021	Lithium
CH-CCR-M52-1021	Nitrate/Nitrite, Arsenic, Cobalt, Lithium, Ammonia, Dissolved Organic Carbon
CH-CCR-M53-1021	Lithium, Iron (Dissolved), Manganese (Dissolved), Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium, Dissolved Organic Carbon
CH-CCR-M77-1021, CH-CCR-TWX4-1021, CH-CCR-W307R-1021	Ammonia
CH-CCR-TWX8-1021, CH-CCR-W304-1021	Nitrate/Nitrite
Ch-CCR-W308-1021	Arsenic (Dissolved), Cobalt (Dissolved), Dissolved Organic Carbon
CH-CCR-W309-1021	Iron (Dissolved), Manganese (Dissolved)
CH-CCR-W317-1021	Chloride, Fluoride, Sulfate, Beryllium, Boron, Calcium, Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium, Mercury

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes No

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability
CH-CCR-M52-1021	Dissolved Organic Carbon	85%, MS	90 – 110%	J-LM
CH-CCR-M53-1021	Manganese, Dissolved	58%, 58%	70 – 130%	NA4
CH-CCR-M53-1021	Dissolved Organic Carbon	87%, MSD	90 – 110%	UJ-LM
CH-CCR-W308-1021	Dissolved Organic Carbon	86%, 69% 21%	90 -110% < 20%	J-LM, MD
CH-CCR-W317-1021	Calcium	-21%, 20%	70 - 130%	NA4

Notes:

LM = Low matrix spike recovery. Result may be biased low.
MD = Imprecision between MS and MSD results.
NA4 = The background concentration in the unspiked native sample is greater than four times the spike concentration and it is not possible to assess data usability for this analyte in this sample based on MS recovery.

9. Field duplicate collected? Yes No

If Yes:

Parent Sample	Field Duplicate
CH-CCR-M79-1021	CH-CCR-FD03-1021
CH-CCR-W307R-1021	CH-CCR-FD04-1021

b. Are RPDs between primary and duplicate results ≤ 20% or are differences between analyte concentrations ≤ the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability
CH-CCR-W307R-1021	CH-CCR-FD04-1021	Barium	24%	J-FD

Note:

FD = Imprecision between primary sample and field duplicate results.

Analyte	Average Reporting Limit		Primary Result		Duplicate Result		RPD	Notes
Samples CH-CCR-M79-1021 and CH-CCR-FD03-1021

Dissolved Organic Carbon	0.50	mg/L	1.3	1.3	U	NC	± RL

Note:

± RL = The difference between analyte concentrations is less than the reporting limit, indicating acceptable sampling and analytical precision.

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No

If Yes:

Sample ID	Analysis
CH-CCR-BAP-1021	Alkalinity
CH-CCR-M55-1021	Total Dissolved Solids
CH-CCR-M69-1021	pH
CH-CCR-M71-1021	Total Dissolved Solids
CH-CCR-M79-1021	pH
Ch-CCR-TWX4-1021	Total Dissolved Solids, pH
CH-CCR-TWX9-1021	Alkalinity
CH-CCR-W308-1021	Alkalinity
CH-CCR-W309-1021	pH
Ch-CCR-W317-1021	Total Dissolved Solids

c. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes No N/A

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes No

Cholla CCR Data Review

Laboratory Name:	Eurofins Environment Testing America, Phoenix		
Sample Delivery Group:	550-173411-2	**Review Date:**	16 December 2021
Validator's Name:	Sam Hass	**Reviewed By:**	Marie Bevier

Sample Summary:

Field Sample Identification	Collection Date and Time	Laboratory Sample Identification	Notes
CH-CCR-W317-1021	10/21/21 15:30	550-173411-47	

Analytical Method:

Analyte	Analyte Group	Method
Lithium	Metals	EPA 200.7

Qualifier Definitions:

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Cholla CCR Data Review

Laboratory Name:	Eurofins TestAmerica, Phoenix		
Sample Delivery Group:	550-173427-1	**Review Date:**	1 December 2021
Validator's Name:	Marie Bevier	**Reviewed By:**	Denise King

Sample Summary:

Field Sample Identification	Collection Date and Time	Laboratory Sample Identification	Notes
CH-CCR-M54-1021	10/24/21 15:57	550-173427-1	
CH-CCR-M59-1021	10/24/21 13:01	550-173427-2	
CH-CCR-M60-1021	10/24/21 15:05	550-173427-3	
CH-CCR-M61-1021	10/24/21 14:00	550-173427-4	
CH-CCR-FD01-1021	10/24/21 14:00	550-173427-5	Field duplicate of CH-CCR-M61-1021

Analytical Methods:

Analyte	Analyte Group	Method
Chloride, Fluoride, Sulfate	Anions	EPA 300.0
Boron, Calcium	Metals	EPA 200.7
Total dissolved solids	General Chemistry	SM 2540C
pH	General Chemistry	SM 4500 H+ B

Qualifier Definitions:

J The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

R The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Sample Receipt Condition:

COC Signed and Complete? Yes No
If No, provide details.

Sample Login Matched COC? Yes No

If no, provide details.

Sample receipt temperature ≤ 6°C? Yes No

If no, provide details.

1. Samples analyzed for metals within 180 days of sampling? Yes No

2. Samples analyzed for mercury, chloride, fluoride, and/or sulfate within 28 days of sampling? Yes No N/A

3. Samples analyzed for total dissolved solids within 7 days of sampling? Yes No N/A

4. Samples analyzed for pH within 15 minutes of sampling? Yes No N/A

If No:

Sample ID	Analysis	Time Between Collection And Analysis	Effect on data usability
CH-CCR-M54-1021	Total dissolved solids	17 days	J-HT
CH-CCR-M59-1021	Total dissolved solids	17 days	J-HT
CH-CCR-M60-1021	Total dissolved solids	17 days	J-HT
CH-CCR-M61-1021	Total dissolved solids	17 days	J-HT
CH-CCR-FD01-1021	Total dissolved solids	17 days	J-HT
CH-CCR-M54-1021	pH	17 days, 23 hours, 33 minutes	J-HT
CH-CCR-M59-1021	pH	18 days, 2 hours, 29 minutes	J-HT
CH-CCR-M60-1021	pH	18 days, 25 minutes	J-HT
CH-CCR-M61-1021	pH	18 days, 1 hour, 30 minutes	J-HT
CH-CCR-FD01-1021	pH	18 days, 1 hour, 30 minutes	J-HT

Note:

HT = Maximum recommended hold time was exceeded.

5. Target analytes detected in the blank? Yes No

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection
Boron	0.00442 mg/L	None

Note:

mg/L = milligrams per liter

6. LCS recoveries within laboratory-specified limits? Yes No

If No:

Analyte	Recovery	Affected Samples

7. MS performed on a project-specific sample? Yes No

If Yes:

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-M61-1021	Chloride, Fluoride, Sulfate, Boron, Calcium

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes No

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability

8. Field duplicate collected? Yes No

If Yes:

Parent Sample	Field Duplicate
CH-CCR-M61-1021	CH-CCR-FD01-1021

a. Is the RPD between primary and duplicate results ≤ 20% or is the difference between analyte concentrations ≤ the reporting limit?

Yes No N/A

Analyte	Average Reporting Limit		Primary Result	Duplicate Result	RPD	Notes
Samples CH-CCR-M61-1021 and CH-CCR-FD01-1021						
Chloride	400	mg/L	1,400	1,400	0.0%	
Fluoride	0.80	mg/L	1.4	1.4	0.0%	
Sulfate	400	mg/L	400	450	12%	
Boron	0.050	mg/L	0.48	0.49	2.1%	
Calcium	2.0	mg/L	88	89	1.1%	
Total Dissolved Solids	100	mg/L	3,200	3,000	6.5%	
pH	1.7	SU	7.6	7.6	0.0%	

Notes:

RPD = relative percent difference

SU = standard pH units

9. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No

If Yes:

Sample ID	Analysis
CH-CCR-M54-1021	Total dissolved solids
CH-CCR-M60-1021	pH

a. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes No N/A

If No:

Sample ID	Analyte	Effect on Data Usability

10. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes No

BTV exceedances are shown in grey shaded cells.
Duplicate sample dates under the same locations are either field duplicates or are instances of samples with multiple filed/lab sample IDs on the same date.
*Fluoride BTV for M-60 and M-61 is 1.5 mg/L
** sulfate re-analysis duplicate is below BTV

Abbreviations and Data Qualifiers:
< = less than
BTV = Background Threshold Value
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
mg/L = milligrams per liter
pCi/L = Picocuries per liter
su = standard units

Notes:

BTV exceedances are shown in grey shaded cells. GWPS exceedence are shown in red text.
Duplicate sample dates under the same locations are either field duplicates or are instances of samples with multiple filed/lab sample IDs on the same date.

Abbreviations and Data Qualifiers:

< = less than
BTV = Background Threshold Value
GWPS = Groundwater Protection Standard
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
mg/L = milligrams per liter
pCi/L = Picocuries per liter
su = standard units
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
UJ = The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes:

BTV exceedances are shown in grey shaded cells. GWPS exceedence are shown in red text.

Duplicate sample dates under the same location are either field duplicates or are instances of samples with multiple field/lab sample IDs on the same date.

Abbreviations and Data Qualifiers:

< = less than
BTV = Background Threshold Value
degrees C = degrees Celsius
FAP = Fly Ash Pond
GWPS = Groundwater Protection Standard
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
mg/L = milligrams per liter
pCi/L = Picocuries per liter
su = standard units
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
UJ = The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Re: **CCR GROUNDWATER ASSESSMENT MONITORING**
STATISTICAL EVALUATION OF LITHIUM
COLLECTED FROM THE BOTTOM ASH POND THROUGH APRIL 2021
Arizona Public Service Company Cholla Power Plant – Navajo County, Arizona

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) presents the results of a statistical evaluation of groundwater monitoring data collected from monitoring wells downgradient of the Bottom Ash Pond (BAP) located at the Arizona Public Service Company (APS) Cholla Power Plant (Site) in Navajo County, Arizona. The statistical evaluation was performed by Geoscience Consulting Strategies LLC (Geoscience Consulting), a subcontractor to Wood Environment and Infrastructure Solutions, Inc. (Wood) pursuant to Coal Combustion Residuals (CCR) Rule requirements for groundwater monitoring and corrective action detailed in 40 Code of Federal Regulations Part 257 (CCR Rule) (Federal Register, 2020).

The BAP is a Site CCR unit that is currently in the corrective action phase of the program based on a statistically significant level (SSL) of cobalt above the established groundwater protection standard (GWPS) in downgradient wells. In 2019 an alternative source demonstration (ASD) was completed in response to a SSL of lithium over its GWPS (Wood, 2019). GWPSs, established for Appendix IV constituents only, are the higher of either the federal Safe Drinking Water Act Maximum Contaminant Level (MCL), an alternative risk-based GWPSs established in the CCR Rule, or the background concentration for each constituent. For the BAP, the lithium GWPS is the background concentration value of 0.31 milligrams per liter (mg/L), based on background well M-64A. In the 2019 ASD, spatially heterogeneous groundwater conditions were outlined in the BAP area which indicate that lithium concentrations may also vary based on geographic location. As noted in Attachment A, in cases of spatial heterogeneity, interwell statistical comparisons are prone to high false positive (or negative) exceedance declarations. Accordingly, intrawell statistical comparisons to establish compliance well-specific GWPSs may serve as an alternative to interwell comparisons (USEPA, 2009).

The statistical evaluation documented herein incorporates data collected from BAP downgradient wells through April 2021 to calculate preliminary intrawell GWPSs for compliance wells M-52A, M-53A, W-305, W-306 and W-314 (the wells included in the 2019 ASD) and supplementary well M-55A.

2.0 STATISTICAL EVALUATION RESULTS

Attachment A presents the statistical evaluation (exploratory data analysis [EDA] and intrawell calculations) conducted by Geoscience Consulting. The results of the evaluation are summarized as follows:

- EDA supports the conclusions of the 2019 ASD that spatial heterogeneity in lithium concentrations exist in groundwater surrounding the BAP;
- Statistical testing supports pooling all data through 2021 for calculation of intrawell GWPSs that can be used to assess future data for MW-52A, MW-53A, W-305, and W-314;
- Calculated intrawell lithium GWPSs for CCR compliance wells are as follows:
    - M-52A is 0.34 mg/L;
    - M-53A is 0.21 mg/L;
    - W-305 is 0.23 mg/L;
    - W-306 is 1.23 mg/L;
    - W-314 is 0.40 mg/L.
- A statistically significant increasing temporal trend is noted for M-55A and W-306 for lithium.

3.0 INCREASING TREND DISCUSSION

The increasing temporal trends at M-55A and W-306 warrant further discussion to recognize that these trends are not indicative of a release from the BAP. In addition to the previous statistical analysis outlining the general spatial heterogeneity around the BAP (Wood, 2019), additional lines of evidence to conclude that the trends at these locations are not due to a BAP release include:

- M-55A is a supplementary well located the farthest upstream from the BAP in Tanner Wash (i.e., it is not a well that is located at the downgradient waste boundary included in the CCR groundwater compliance program to assess whether the BAP is leaking). Supplementary wells W-308, W-309, and compliance well W-314 are all screened in alluvium and located between the BAP and M-55A. Based on the analysis, W-314 appears to have a statistically significant decreasing lithium trend. In addition, the water levels in W-308 and W-309 are typically lower than the water level at M-55A and hydraulically downgradient of M-55A. Figure 1 presents a potentiometric surface map created using water-level measurements collected in October 2021 to show all well locations and relative water levels around the BAP.

- Compliance wells W-306 and W-305 are both screened within the Tanner Wash Alluvium, with W-305 screened below W-306 approximately 50 feet (ft). W-306 is screened from 5015 to 4995 feet above mean sea level (ft amsl) and W-305 is screened from 4965 to 4945 ft amsl. The nearby cutoff wall of the BAP's southern dam is installed within the Tanner Wash Alluvium to an approximate total depth of 4950 ft amsl (100-ft cutoff wall from surface to depth). As a result, alluvium remains between the base of the cutoff wall and bedrock that is a potential seepage pathway. The alluvium and potential seepage pathway are at the same elevation as the screen for W-305. However, there is no (statistical) increasing trend noted for lithium at W-305 at this time. If an increasing temporal trend was indicative of a release from the BAP, an increasing temporal trend would be expected within W-305 before W-306 due to the vertical proximities of screen depths and the total depth of the cutoff wall and alluvium beneath.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the location of M-55A and W-306 and their well screens compared to other wells closer to the BAP and potential seepage pathways, and without apparent increasing trends at wells closer to the BAP and potential seepage pathways, it is unlikely the increasing trends observed at M-55A and W-306 are caused by a release from the BAP. They are likely due to the documented spatial heterogeneity around the BAP (Wood, 2019).

Considering the results of the statistical evaluation presented in Attachment A, previous ASD (Wood, 2019), and the points discussed above; Wood recommends use of the presented intrawell lithium GWPSs for future BAP water quality analyses at compliance wells. Wood recommends continued trend testing as part of future statistical analyses.

Subject: **Statistical Evaluation of Lithium Bottom Ash Pond Data**
Preliminary Intrawell GWPS Calculations
Arizona Public Service Company Cholla Power Plant– Navajo County, Arizona

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) documents the statistical evaluation of lithium data collected from the Bottom Ash Pond (BAP) groundwater monitoring network located at the Arizona Public Service Company (APS) Cholla Power Plant (Cholla) in Navajo County, Arizona. This statistical evaluation is completed by Geoscience Consulting Strategies LLC in accordance with the Cholla Statistical Data Analysis Work Plan (SDAWP) and the Coal Combustion Residuals (CCR) Rule (Wood, 2018; Federal Register, 2020).

The BAP underwent an Alternative Source Demonstration (ASD) in 2019 in response to statistically significant increases (SSI) in lithium and cobalt concentrations over their respective Groundwater Protection Standards (GWPSs) (Wood, 2019). The GWPS for lithium reflects sample concentrations collected from a designated background monitoring well (i.e., M-64A). The ASD concluded that the lithium SSI declaration resulted from background groundwater lithium concentrations not adequately representing groundwater lithium concentrations observed beneath the BAP. The lithium concentrations in the BAP compliance monitoring wells range between non-detect (<0.2 mg/L) and 1.3 mg/L; the lithium GWPS using sample data from M-64A is equal to 0.31 mg/L. To avoid false-positive SSI declarations for lithium in the future at the BAP, the ASD recommended establishing intrawell lithium GWPSs (Wood, 2019). This Tech Memo describes the premise for the intrawell lithium GWPSs and their calculation. Cobalt remains a constituent of concern at the BAP and is not within the scope of this Tech Memo.

The following sections discuss the Exploratory Data Analysis (EDA) procedures and the preliminary lithium intrawell GWPS calculations for the following BAP compliance monitoring wells: M-52A, M-53A, M-55A, W-305, W-306 and W-314.

2.0 DATA INPUTS

The subject analysis was completed using ProUCL software (United States Environmental Protection Agency [US EPA], 2015). The sampling period for the subject analysis ranges from December 2015 to April 2021. Verbal communications with Wood Environment & Infrastructure Solutions, Inc. (Wood) and APS indicated that the April 2020 sampling event reflects a field sampling anomaly and is, therefore, excluded from this data evaluation. The number of sample events for BAP compliance monitoring wells ranges between 19 and 24.

Supplementary data collected at the BAP are included for relative comparison purposes but are excluded from the intrawell statistical calculations. The sampling period for the supplementary data range from December 2018 to April 2021 with sample counts ranging between 1 and 7.

3.0 INTRAWELL ASSESSMENT OVERVIEW

Purpose: The BAP ASD set the premise for the intrawell statistical comparisons by demonstrating that groundwater conditions beneath the BAP, and surrounding areas, are spatially heterogeneous with respect to lithium concentrations (Wood, 2019). Spatial heterogeneity means that lithium concentrations at one geographic location are not necessarily representative of lithium concentrations at nearby geographic locations. Therefore, interwell statistical comparisons between a compliance monitoring well (e.g., M-52A) and a designated background monitoring well (i.e., MW-64) are inadequate because the comparisons are prone to high false positive (or negative) SSI declarations. When interwell statistical comparisons are inadequate, intrawell statistical comparisons are an alternative method for assessing site compliance (US EPA, 2009).

Approach: In contrast to interwell GWPSs, intrawell GWPSs are calculated specific to each geographic location where there is a compliance monitoring well that is located either downgradient or cross gradient of the BAP. Intrawell GWPSs need special consideration since both background data and compliance data are collected from the same compliance monitoring well. It is necessary to set a timeframe, or period, to designate the monitoring well's background data versus compliance data. It is easy to define this timeframe *a priori,* where data collection prior to the onset CCR Unit operation is designated as "background" and data collection afterward is designated as "compliance". In cases where this designation must be made *a posteriori*, or after a CCR Unit is operational, data-driven evaluation techniques can help determine a defensible timeframe.

The BAP is an *a posteriori* case and requires data-driven evaluations to determine if the lithium sample data collected to date represent a single statistical population. If so, the data can be pooled (or combined) together to establish an intrawell lithium GWPS. Future sampling events within the compliance monitoring well are then compared to this GWPS to assess future CCR Rule compliance at the BAP. The benefits to pooling data under a single timeframe include:

- Higher sample counts resulting in more robust statistical comparisons;
- Lower false positive and false negative SSI declaration rates;
- Help overcome the inadequacies of short and variable sampling frequencies between 2015 and 2017 (e.g., biweekly to quarterly sampling); and
- More representative sample population that captures short-term and long-term temporal variations in lithium concentrations.

Definitions: To limit confusion, this Tech Memo will reference "baseline", in lieu of "background", for *a posteriori* intrawell statistical assessments at the BAP.

4.0 EXPLORATORY DATA ANALYSIS AND INTRAWELL CALCULATIONS

Exploratory Data Analysis (EDA) consist of time series and trend analysis; spatial heterogeneity analysis; outlier analysis; statistical distribution or "goodness of fit" statistics; hypothesis testing and summary statistics. EDA results fed into the statistical method selection for calculating the intrawell GWPS for compliance monitoring wells M-52A, M-53A, M-55A, W-305, W-306 and W-314.

Following are a summary of results from the EDA and intrawell calculations.

Lithium concentrations: Figure 1 presents the range of lithium concentrations at each compliance monitoring well in addition to the supplemental monitoring well locations within the vicinity of the BAP. Figure 1 indicates:

1) lithium concentrations across the sampled area, including M-64A background monitoring well, exceed the 0.4 parts per billion "risk-based alternative" GWPS promulgated under the CCR Rule; and

2) the majority lithium concentrations across the general region exceed the preceding 0.31 mg/L "background" GWPS, especially near Tanner Wash.

The BAP ASD states that lithium concentrations are naturally occurring at the BAP and the range of concentrations shown in Figure 1, and their general spatial distribution, support this statement (Wood, 2019).

Lithium spatial heterogeneity: Figure 2 includes box and whisker plots for compliance monitoring well locations and supplemental monitoring locations (for relative comparison purposes). The box and whisker plots show considerable spatial heterogeneity (e.g., variability) in lithium concentrations among sampling locations and sampling depths.

This figure supports the BAP ASD conclusion that spatial heterogeneity in lithium concentrations exist at the BAP and underscores the need for calculating lithium intrawell GWPSs (Wood, 2019).

Lithium time series: Figures 3 through 8 include time series and trend plots for the BAP compliance monitoring wells. Monitoring wells M-55A and W-306 show statistically significant ($p<0.05$) increasing trends in lithium concentrations over time. The remaining compliance monitoring wells show no visible trends or show visible trends that are statistically insignificant.

Temporal trends can be intrinsic to groundwater systems. However, to have continued and future confidence in the lithium intrawell GWPSs for M-55A and W-306, the increasing trends need further investigation by a hydrogeologist and geochemist to validate they are not indicative of a release at the BAP and, rather, are reflective of intrinsic and ambient groundwater conditions.

Intrawell timeframe selection: The timeframe between 2015 – 2017 (or pre-2017) represents the BAP sampling period that precedes the commencement of the CCR Rule. During this timeframe, samples were collected at a relatively high and variable frequency to meet the minimum sampling requirements put forth by the CCR Rule. Past data evaluations of the pre-2017 data generally indicate:

1) the data are temporally dependent, or correlated, because they are sampled too close in time; data dependence violates some of the assumptions of the statistical methods put forth under the CCR Rule and

2) are not fully representative because they fail to capture the long-term temporal variability in lithium concentrations at the BAP over time.

For these reasons, it is advantageous to increase the sample period to reflect a larger sample population that includes both pre- and post-2017 sample data to calculate the BAP intrawell GWPSs (post-2017 sample data reflect the 2018 to 2021 sample period).

To combine the pre-2017 with the post-2017 sample data it is necessary to determine if the sample data from the two sampling periods represent the same underlying statistical population. Figure 9 illustrates side-by-side box and whisker plots for the two sampling periods within each compliance monitoring well. The figure presents a qualitative comparison and indicates the differences between the two sampling periods are generally weak except for monitoring well W-306. For W-306, the noted difference is likely attributed to the strong temporal trend in lithium concentrations at this monitoring location. A temporal trend will cause the average lithium concentration in the monitoring well to change at a certain rate over time and, thereby, cause recent sample data to reflect a different sample population in comparison to historic sample data within the same monitoring well.

Unlike visual comparisons (e.g., side-by-side box and whisker plots) hypothesis testing can perform statistical comparisons with measured statistical confidence. Specifically, the Kolmogorov-Smirnov (K-S) test and Wilcoxon-Mann-Whitney (WMW) test can determine if the two sampling periods (pre-2017 and post-2017) derive from the same statistical population.

The K-S test is a non-parametric statistical method that compares the population distribution functions, or curves, between two sample populations, in this case the pre-2017 and post-2017 sample periods within a given compliance monitoring well. The K-S test is sensitive to the shape and position of the two distribution curves; the greater the departure between these curves the stronger the indication that the sample populations derive from two different underlying statistical populations. This reflects in the "D Statistics" column shown in Table 1. The null hypothesis is rejected if the "D Statistics" > "D Critical Value" and the "P Value" < 0.05, which corresponds to a 95% confidence level. The null (Ho) and alternative (Ha) hypotheses for the K-S Test are as follows:

Ho: Pre-2017 Li concentration distribution = Post-2017 Li concentration distribution
Ha: Pre-2017 Li concentration distribution ≠ Post-2017 Li concentration distribution

Except for M-55A and W-306, the K-S test results shown in Table 1 suggest the pre-2017 and post-2017 sample periods derive from the same statistical population. The significant departures between the two sample periods for M-55A and W-306 are likely to be a consequence of the statistically significant temporal trends in lithium concentrations within these wells.

While the KS test compares the distance between the two distribution curves, the WMW test is a non-parametric test that determines if two sample populations derive from the same statistical population by comparing their central tendencies (e.g., median values). The test rejects the null hypothesis if the p value < 0.05, which corresponds to a 95% confidence level. The null (Ho) and alternative (Ha) hypotheses for the WMW test are:

Ho: Pre-2017 Li median = Post-2017 Li median
Ha: Pre-2017 Li median ≠ Post-2017 Li median

Table 2 includes the WMW test results. In general, the WMW test results support the K-S test findings.

K-S TEST RESULTS

Well	D Statistic	D Critical Value	P Value	Decision (95% confidence level)*
M52A	.27	.34	.74	Fail to reject Ho; difference is insignificant
M53A	.014	.34	1.0	Fail to reject Ho; difference is insignificant
M55A	0.64	0.36	0.05	Reject Ho; significant difference likely due to increasing trend in Li concentrations over time in well
W-305	0.1	0.38	1	Fail to reject Ho; difference is insignificant
W-306	0.62	0.37	0.028	Reject Ho; significant difference likely due to increasing trend in Li concentrations over time in well
W-314	0.26	0.36	0.83	Fail to reject Ho; difference is insignificant

*Reject Ho if D statistics > D critical value and the p value < 0.05

Table 1.

WMW TEST RESULTS

Well	Pre-2017 Median	Post-2017 Median	P Value	Decision (95% confidence level)*
M52A	0.255	0.25	0.978	Fail to reject Ho; difference is insignificant
M53A	0.2	0.21	0.941	Fail to reject Ho; difference is insignificant
M55A	0.35	0.41	0.02	Reject Ho
W-305	0.21	0.21	0.891	Fail to reject Ho; difference is insignificant
W-306	0.65	0.715	0.023	Reject Ho
W-314	0.32	0.32	0.343	Fail to reject Ho; difference is insignificant

Table 2.

The preponderance of hypothesis testing results support pooling the pre-2017 and post-2017 periods to reflect a single, representative timeframe for calculating the intrawell GWPS for lithium in each compliance monitoring well except for M-55A and W-306.

Intrawell lithium GWPS calculations: The Unified Guidance recommends calculating the Upper Tolerance Limit (UTL) to represent the GWPS when the site-specific GWPS is higher than the MCL or, in this case, the CCR Rule alternative risk-based GWPS. The UTL is designed to be "a reasonable maximum on the likely range of background concentrations" (USEPA, 2009) and, similar to the MCL or "alternative risk-based" GWPS, the UTL can accommodate a statistical hypothesis structure that is reversible, meaning it is appropriate for both compliance and corrective action testing, if necessary. Consequently, the UTL application appropriate for Appendix IV assessment monitoring under the CCR Rule. In general, the UTL represents a sample concentration range, or coverage, that contains a pre-defined proportion of the underlying statistical population. The tolerance limit calculation uses a multiplier ($\boldsymbol{\tau}$) that is based on the selected data coverage (e.g., coverage γ = 95%) and selected confidence level (e.g., a 95% confidence level or α = 0.05). For the subject analysis, γ = 99% and α = 0.05.

For assessment monitoring, ***single point sample concentrations are not compared to the intrawell lithium UTLs***; rather, a statistical comparison is performed using the lower confidence limit of future compliance data. The lower confidence limit reflects the lower boundary within which the central tendency of the compliance data (e.g., mean or median) is expected to reside with measured statistical confidence. If the lower confidence limit exceeds the intrawell UTL GWPS, there is enough statistical evidence to declare an SSI and possibly justify corrective action.

Table 3 includes the calculated intrawell lithium GWPSs for the BAP compliance monitoring wells and includes the UTL calculation type (e.g., parametric or non-parametric) based on data-driven diagnostics. The UTLs in Table 3 were calculated in accordance with the US EPA's Unified Guidance (US EPA, 2009) and using the same approach and methods as the Sedimentation Pond CCR Unit at the Cholla Power Plant.

Special considerations were made for M-55A and W-306 where the UTLs were calculated around the statistically significant ($p<0.05$) temporal trend. The UTLs calculated around the trend are proposed as a 'proof of concept' calculation and their applicability is pending 1) further review of the source to the temporal trend in these compliance monitoring wells and 2) considerations for other statistical methods that might prove more appropriate, such as control charts (US EPA, 2009).

5.0 SUMMARY

Exploratory statistical findings support the recommendation put forth in the BAP's ASD to calculate intrawell GWPSs. As previously determined in the ASD, lithium concentrations across the region exhibit spatial heterogeneity according to sampling location and sampling depth (Figure 2).

This Tech Memo presents preliminary calculations for intrawell lithium GWPSs at the BAP (Table 3). The increasing trends at MW-55A and W-306 need further investigation to confirm trends are not indicative of a release at the BAP but rather are reflective of intrinsic and ambient groundwater conditions. The intrawell GWPSs honor these trends to present a 'proof of concept' in completing the subject analysis. However, alternative intrawell statistical methods (e.g., control plots) should be considered to address these trends over time, if deemed more appropriate.

Lithium Intrawell GWPSs						
	M-52A	M-53A	M-55A	W-305	W-306	W-314
Sampling period*	December 2015 - April 2021	December 2015 - April 2021	December 2015 - April 2021	December 2015 - April 2021	December 2015 - April 2021	December 2015 - April 2021
Sample count	24	23	19	21	22	22

FIGURES

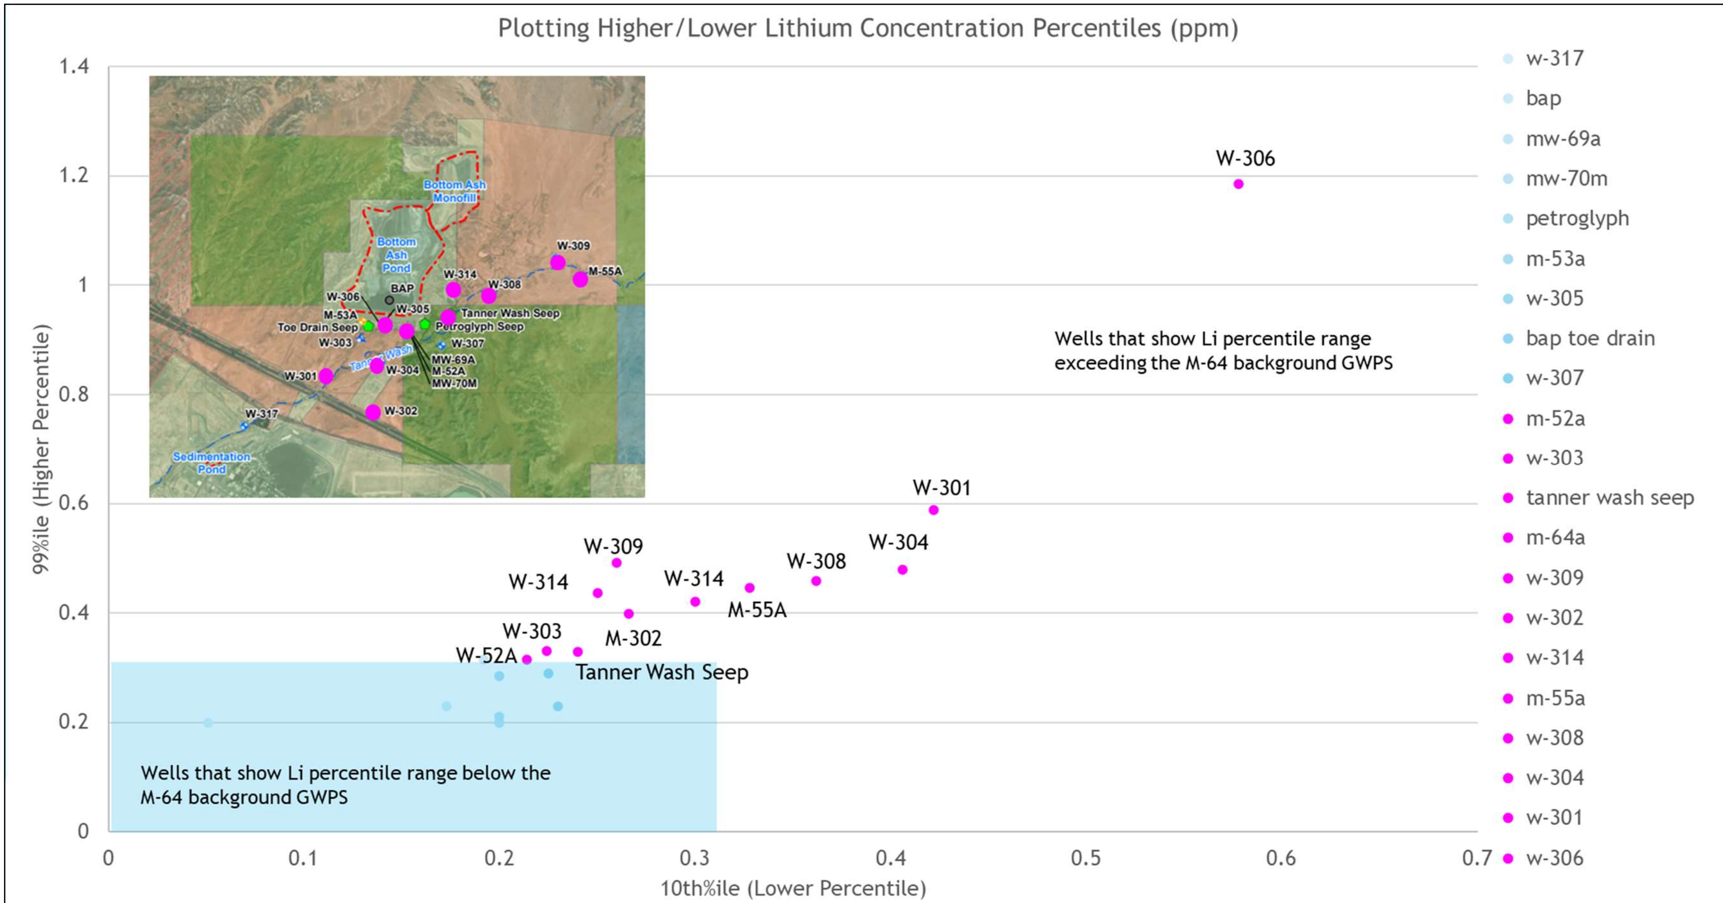

Figure 1. *This informal figure illustrates the general range of lithium concentrations for each sample location. Sampling locations that exceed the preceding 0.31 mg/L background (e.g., M-64A) GWPS are symbolized by a pink dot. Upper and lower percentiles are used (in place of maximum and minimum lithium concentrations) to avoid the influence of potential extreme data anomalies. Note the 0.31 mg/L GWPS reflects pre-2017 sample data at M-64a and does not reflect more recent concentrations sampled at this well.*

The figure inset illustrates the general vicinity of sampling locations to the BAP and Tanner Wash.

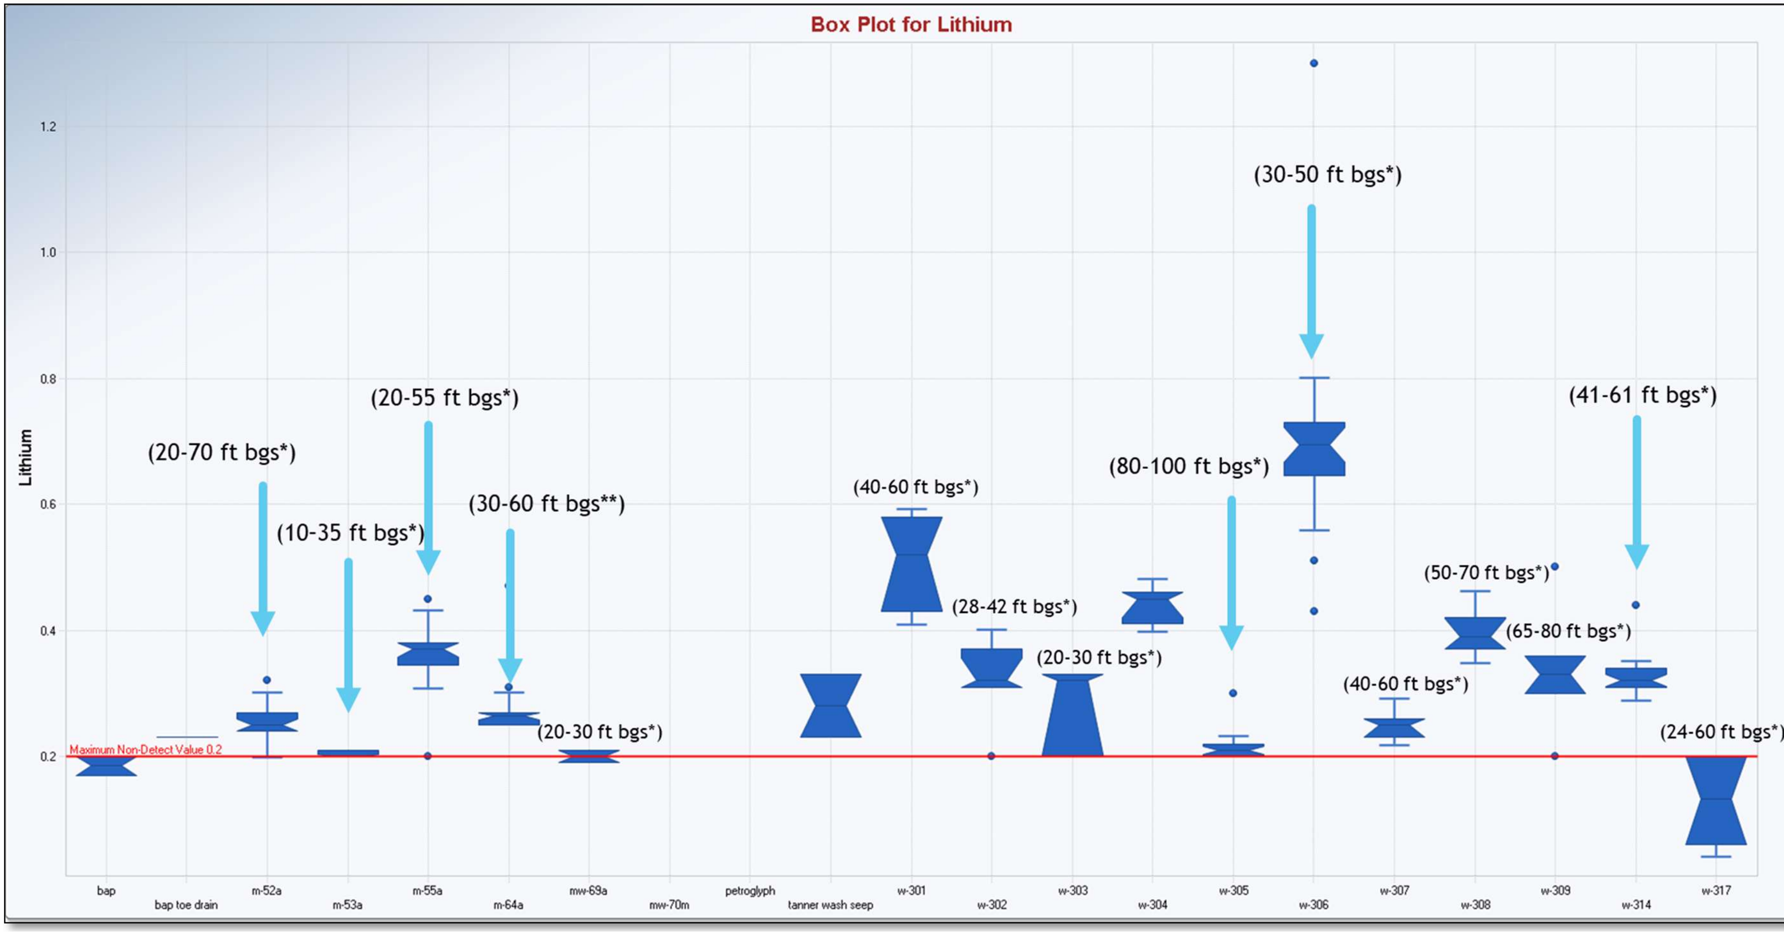

***Figure 2**. Box and whisker plots for compliance monitoring well and supplemental monitoring locations. The well screened intervals are shown in parentheticals above the respective sampling location (feet below ground surface [ft bgs]). Lithium concentrations are shown as parts per million (mg/L).*

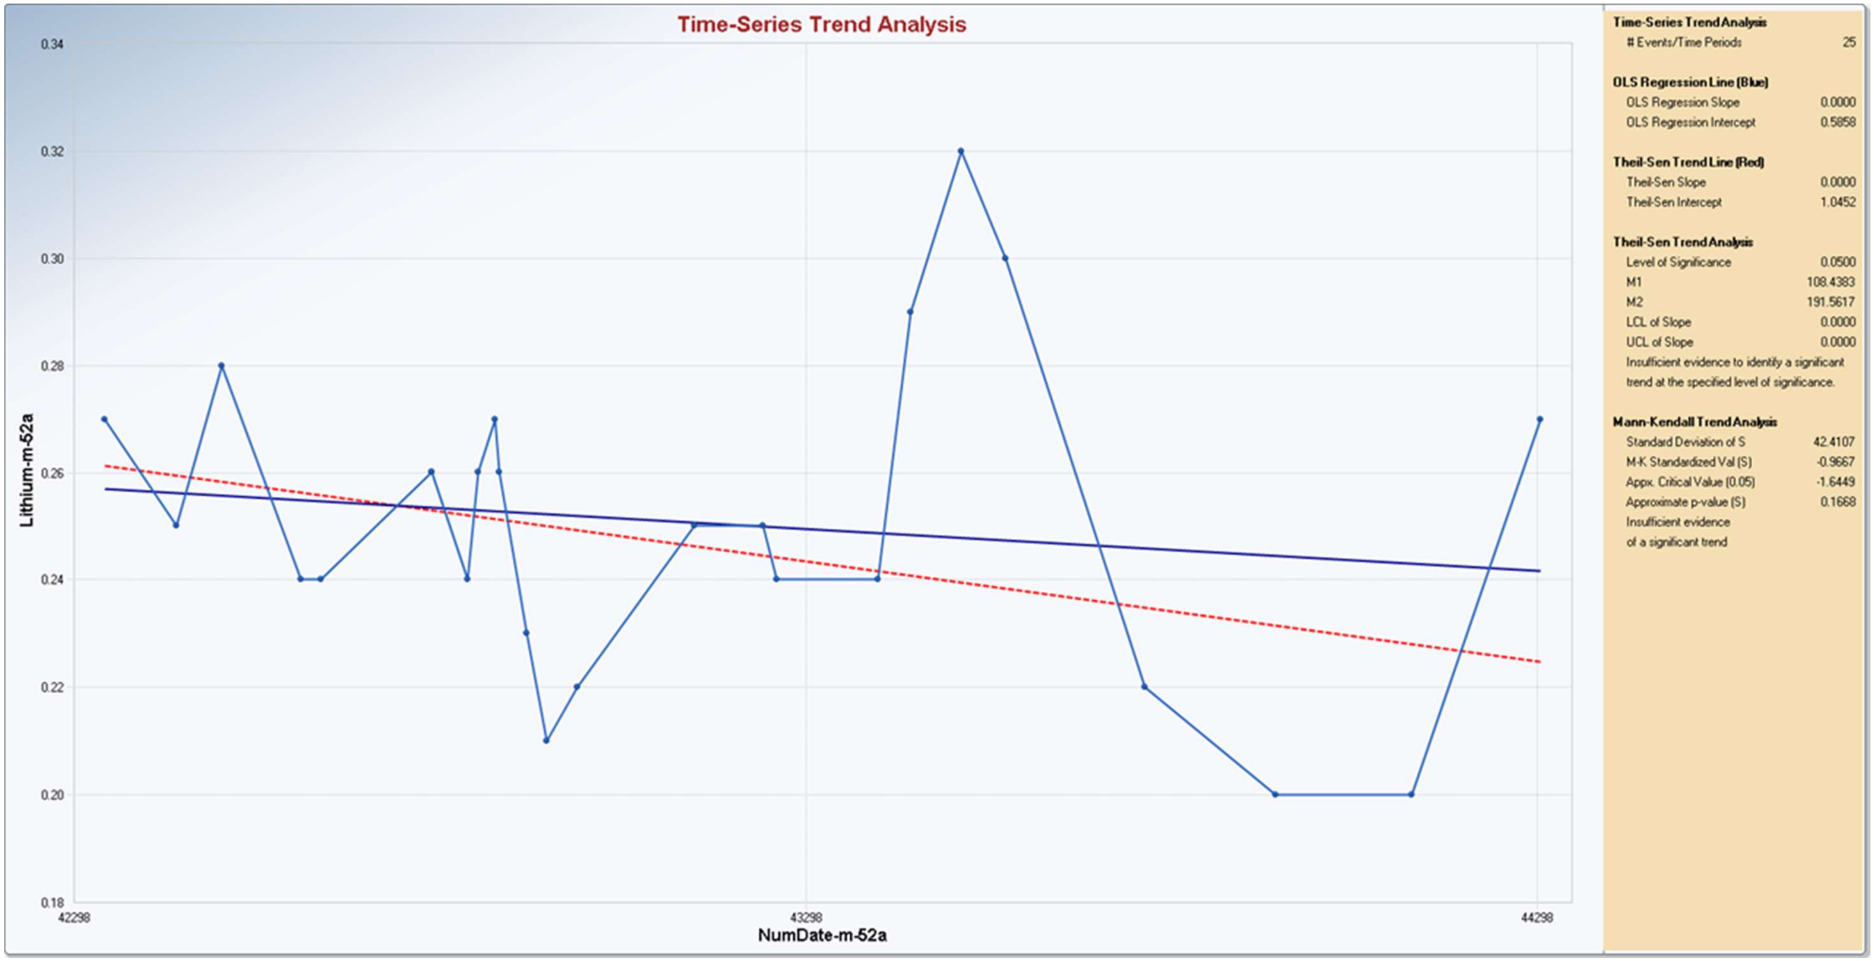

Figure 3. *Time Series and Trend Plot for M-52a. Lithium concentrations are in mg/L. The x-axis reflects sampling dates in numeric form, per ProUCL software requirements.*

1.0 Introduction

Wood Environment & Infrastructure Solutions, Inc. (Wood) prepared this Well Completion Report to document the installation, development, and aquifer testing of four new extraction wells and the drilling of three investigative borings at the Cholla Power Plant (Cholla or the Site) in Navajo County, Arizona. The work described herein was performed pursuant to requirements specified in 40 Code of Federal Regulations Part 257 (herein referred to as the Coal Combustion Residuals [CCR] Rule; Federal Register, 2018 and 2020 Amendments including A Holistic Approach to Closure, Parts A and B). The new extraction wells, designated EW-01, EW-02, EW-03, and EW-04, were installed downgradient of the Fly Ash Pond (FAP) as part of a corrective measures (CM) pre-design study to evaluate potential remedies to address groundwater impacts resulting from the FAP and potentially utilized to mitigate groundwater impacts. The three investigative borings, designated INV-01, INV-02, and INV-03, were drilled downgradient of the FAP to investigate the Moqui member of the Moenkopi Formation (Moqui).

Section 2.0 documents existing hydrogeologic units at the site and the basis for installing extraction wells and advancing investigative borings. Section 3.0 documents the drilling, installation, and development of the extraction wells and drilling of the investigative borings. Section 4.0 documents and describes the analysis of the aquifer tests performed at the extraction wells. Section 5.0 documents groundwater sampling performed at the extraction wells. Section 6.0 presents a summary and recommendations, and Section 7.0 provides report references.

For additional background information on descriptions of the Site and CCR units, surface water hydrology and site geology please reference Montgomery & Associates (2011), Montgomery & Associates (2017), and Wood Environment & Infrastructure, Inc. (2021).

2.0 Purpose

The following sections describe the purpose of the field activities performed at the FAP as they related to the CCR Rule.

2.2 Basis for Extraction Well Installation

The groundwater monitoring and corrective action process defined in the CCR Rule includes a phased approach to groundwater monitoring at the Site. The initial phase is detection monitoring, which focuses on a set of constituents (listed in Appendix III of the CCR Rule) that are relatively mobile components of CCR and therefore represent indicators of possible impacts from CCR in groundwater. If statistically significant increases (SSIs) of any of the Appendix III constituents relative to background conditions are detected in the downgradient waste boundary wells and cannot be demonstrated to be associated with a source other than the CCR unit, then groundwater monitoring moves into assessment monitoring.

In 2018, APS completed a statistical analysis of Appendix III constituent data collected during the detection monitoring phase at the FAP from November 2015 to September 2017. The analysis declared an SSI over background for boron, fluoride, calcium, chloride and pH at the FAP (Montgomery & Associates, 2018). Accordingly, the FAP was placed into the assessment monitoring program pursuant to the CCR Rule.

Assessment monitoring focuses on the constituents listed in Appendix IV of the CCR Rule. The Appendix IV constituents are generally less mobile and occur at lower concentrations in groundwater than the Appendix III constituents, although they also have health and/or environmental risk-based standards. Concentrations of Appendix IV constituents measured in groundwater samples collected from CCR compliance wells are compared to Groundwater Protection Standards (GWPSs), which are the higher of either the federal Safe Drinking Water Act Maximum Contaminant Level, an alternative risk-based GWPS identified in the CCR Rule, or a statistically-driven background threshold value for each constituent. A statistical analysis of Appendix IV constituent data collected from FAP compliance wells indicated GWPS exceedances for arsenic, cobalt, fluoride, lithium, and molybdenum at statistically significant levels (Wood, 2018).

In response to the GWPS exceedances and pursuant to CCR Rule requirements, APS performed a hydrogeologic investigation to characterize the nature and extent of groundwater impacts resulting from the FAP (Wood, 2020). Additionally, APS completed an Assessment of Corrective Measures (ACM) to evaluate potential remedies to address the groundwater impacts (Wood, 2019). The ACM screened several applicable technologies to evaluate the benefits, constraints, risks, and relative time to benefit from implementation of a given technology. As indicated in the ACM, an extraction well network was identified as a viable remedial technology (Wood, 2019). The new wells, EW-01, EW-02, EW-03, and EW-04, were installed to evaluate the effectiveness of an extraction well network as a potential remedial technology, as well as to provide an interim corrective measure to limit groundwater impacts while the remedy alternatives for the FAP are being evaluated and selected.

2.3 Basis for Investigative Borings

As indicated above, the top of the Moqui is locally saturated near the FAP dam. To investigate the degree to which the Moqui is saturated, two investigative borings (INV-02 and INV-03) were drilled into the Moqui near the right and left abutments of the FAP dam. Previous site investigations suggest that monitoring well W-126 may be partially completed within the Moqui (Wood, 2021). To evaluate this possibility, one investigative boring (INV-01) was drilled into the Moqui approximately 240 ft southeast of W-126. The results of the investigative borings are discussed below.

3.0 Hydrogeologic Setting

For the purposes of this well installation Technical Memorandum, the relevant hydrostratigraphic unit is the uppermost aquifer at the FAP, which is the alluvial aquifer. The CCR Rule requires that the uppermost aquifer underlying each CCR unit be monitored to evaluate potential impacts from the unit.

At the FAP, the uppermost aquifer is within an alluvial drainage that flows downgradient to the Lower Colorado Alluvium aquifer. The FAP is constructed primarily on the relatively impermeable Moqui member of the Moenkopi Formation, a bedrock unit consisting predominately of mudstone with abundant gypsum; however, alluvial sediments which can include weathered Moqui underlie the FAP. The FAP dam has a clay core that extends through the alluvium to bedrock where the alluvium was less than 20 feet (ft) thick at the time of dam construction. In the middle where the alluvium was greater than 20 ft thick, a cutoff wall was constructed that generally extended to bedrock. Groundwater at the toe of the FAP dam flows west-southwest primarily through shallow alluvial sediments (which are fairly fine grained) and then merges with the Little Colorado River Alluvium where the predominant direction of groundwater flow is to the west. Limited localized saturation also occurs in the uppermost portion of the Moenkopi Moqui near the FAP dam.

4.0 Drilling and Well Installation

This section summarizes the drilling and well installation activities and includes a well location map (Figure 1), an investigative boring map (Figure 2), well construction table (Table 1), lithologic logs and well construction diagrams (Appendix A), and a photograph log (Appendix B).

4.1 Extraction Well Siting and Pre-mobilization Activities

The extraction wells were sited along the southwestern toe of the FAP dam in the vicinity of the Geronimo Seepage Intercept system. The wells were sited at locations where cone penetrometer tests indicated the presence of elevated pore pressures or artesian conditions and potentially thicker zones of gravelly alluvium (Wood, 2021).

Prior to site mobilization, Wood updated the existing Health and Safety Plan for the Site and ensured all Wood field personnel and subcontractors received the APS Fossil Generation Contractor Safety training.

4.2 Drilling

Prior to drilling, an underground utility clearance was performed near each well and boring location, and each location was hydro-excavated to a depth of approximately 6 ft below ground surface (bgs). It is assumed that alluvium was present at all borings except INV-02 within the hydro-evacuated interval based on the surface geology and visual inspection of the portion of the hole what was visible after hydro-evacuation Wood contracted with a licensed Arizona driller, Cascade Drilling, LP, to drill and install the extraction wells and investigative borings using a truck-mounted sonic drill rig powered with a diesel engine.

Drilling occurred from December 9th to 15th, 2020. The extraction well boreholes were drilled to a 10-inch (in) diameter and the investigative borings were drilled to an 8-in. diameter. The investigative borings were abandoned after drilling using bentonite grout. Drilling was supervised by a Wood field geologist, and continuous formation samples were logged at 2.5-ft depth intervals using the Unified Soil Classification System. Lithologies encountered at each boring include the Little Colorado River alluvium and the Moqui. Descriptions of the formation samples are recorded on the lithologic logs included in Appendix A, and photographs of the formation samples are included as Appendix B. The well locations and investigative boring locations are depicted on Figures 1 and 2, respectively.

Notable observations from drilling are summarized below:

- EW-01: Alluvium was encountered from 6 to 50 ft bgs, and the Moqui was encountered from 50 to 55 ft bgs. The alluvium was predominantly silt with either sand or clay, except from approximately 45 ft bgs to 50 ft bgs where the grain size increased to be a silty sand with gravel prior to the contact with the Moqui. Groundwater was encountered in the alluvium at 35 ft bgs, and the Moqui was observed to be dry.
- EW-02: Alluvium was encountered from 6 to 49 ft bgs, and the Moqui was encountered from 49 to 55 ft bgs. The alluvium ranged from sandy silt to silty sandy, except from approximately 37 ft bgs to 49 ft bgs where increased gravel content (approximately 20% to 35%) was encountered prior to the contact with the Moqui. Groundwater was encountered in the alluvium at 15 ft bgs, and the Moqui was observed to be dry.
- EW-03: Alluvium was encountered from 6 to 50 ft bgs, and the Moqui was encountered from 50 to 55 ft bgs. The alluvium was predominantly silty sand, except from approximately 42.5 ft bgs to 50 ft bgs where increased gravel content (approximately 25% to 55%) was encountered prior to the contact with the Moqui. Groundwater was encountered in the alluvium at 15 ft bgs, and the Moqui was observed to be dry. However, a section of very stiff silt and clay from 32 to 35 ft bgs was observed which appeared to be a zone of decreased saturation.
- EW-04: Alluvium was encountered from 10 to 19 ft bgs, and predominantly consisted of silty sand (10 to 17 ft bgs). No cores were retrieved from 6 to 10 ft bgs because the soil was over saturated and could not be retrieved intact from the drill barrel. The Moqui was encountered from 19 to 30 ft bgs (the borehole was advanced 11 ft into the Moqui to investigate the potential for saturation in the Moqui). A

2-ft thick section of clayey gravel was identified overlaying the Moqui from 17 to 19 ft bgs. Groundwater was encountered in the alluvium at 3 ft bgs, and the Moqui was observed to be dry.

- INV-01: Alluvium encountered from 6.5 to 22 ft bgs, and the Moqui was encountered from 22 to 50 ft bgs. The alluvium was predominantly silty sand. Groundwater was encountered in the alluvium at 3 ft bgs. The Moqui was predominantly dry at this location. However, moisture was noted within thin beds of claystone interbedded in the Moqui. A 5-ft thick section of silt with sand overlying the Moqui from 17 to 22 ft bgs was identified as a zone of decreased saturation.
- INV-02: the Moqui was encountered from 5 to 50 ft bgs. Groundwater was not observed in the boring, but moisture was noted within gypsum beds interbedded in the Moqui.
- INV-03: Alluvium primarily consisting of sandy silt was encountered from 5 to 8.5 ft bgs, and the Moqui was encountered from 9 to 50 ft bgs. Groundwater was not observed in the boring, but moisture was noted within the alluvium and gypsum beds interbedded in the Moqui.

4.3 Well Installation

Extraction well installation occurred from December 10 to 13, 2020. Construction details for each well are presented in Table 1 and included on the lithologic logs (Appendix A). The extraction wells are each constructed of a 6 in nominal diameter Schedule (SCH) 80 polyvinyl chloride (PVC) well casing and a 6 in nominal diameter SCH 80 PVC screen with 0.020-in. slots. Installation depths for the extraction well screens were based on observations made during drilling. A 5 ft SCH 80 PVC sump was installed beneath the screened interval at each well. Filter pack material consists of 12-20 silica sand, and a transition seal of 20-40 silica sand was installed above the filter pack. A well seal consisting of bentonite was installed above the transition seal, followed by a surface seal consisting of cement-bentonite grout. Surface completions consist of 3-ft above-grade steel vaults placed within a concrete pad.

4.4 Well Development

The extraction wells were developed from December 14 to 18, 2020. Development techniques consisted of:

- Surging and bailing the well until the amount of sediment produced by each cycle was reduced to trace amounts; and
- Development pumping using a 12-volt Mega-Monsoon® pump.

Details of each well's development are summarized in the Table 2. As indicated, turbidity remained relatively high near the end of development pumping (i.e., greater than 5 nephelometric turbidity units), which is likely due to large amounts of fine-grained sediments in the aquifer.

4.5 Management of Investigation-Derived Waste

Investigation-derived waste consisted of soil cuttings produced during drilling and groundwater removed during well development. The soil cuttings were spread on the ground surface near the well site. Groundwater pumped during development was directed to 55-gallon drums and then transported to the Plant via a water truck for discharge into the Sedimentation Tank, which is then reused in Plant operations.

4.6 Well Survey

The location, surface elevation, and measuring point elevation of each extraction well and the location and surface elevation of each investigative boring was surveyed by Martin Land Surveys, Inc., Martin Martin registered Arizona land surveyor #18548 on December 30, 2020. Table 1 summarizes the survey data for the new extraction wells.

5.0 Extraction Well Aquifer Tests

This section summarizes the performance and analysis of aquifer tests performed at the FAP extraction wells to evaluate local aquifer properties (e.g., transmissivity, hydraulic conductivity, storativity), specific capacities for each extraction well, and the zone of influence from pumping each extraction well.

The aquifer tests consisted of one step-rate test and one 24-hour constant rate test at each extraction well. Water levels were recorded at the extraction wells and observation points using pressure transducers and were periodically checked with a water-level meter where possible; the small diameter of the piezometers and Geronimo A and B sounding tubes prevented measurements with a water-level meter. Observation points included the following wells and piezometers, which are depicted on Figure 3:

- F-91, F-92, F-111, F-112, Geronimo A, Geronimo B, W-123, W-126, MW-50A, and MW-66A.

Wood field personnel noted a blockage in piezometer F-92 at approximately 20 ft bgs which prevented the deployment of a pressure transducer below this depth. Construction details for the observation well points used for the aquifer tests are included in Table 1.

5.1 Aquifer Test Equipment and Extracted Groundwater Management

A 3-in nominal diameter test pump (Grundfos model SQE 10-330) was used to conduct the aquifer tests. Pumping rates were measured using a Fill-Rite® TT10AN in-line digital flow meter and verified by observing the time required to fill a container of known volume. Water-level data were collected using In-Situ Level TROLL® pressure transducers with vented cables and checked with a water-level meter where possible. Groundwater pumped during the aquifer tests was containerized at the test well location before conveyance to the Plant for reuse in operations.

5.2 Step and Constant Rate Tests

A step rate test with four steps, followed by a constant rate test was performed on each extraction well. The step rate test was used to calculate the specific capacity of each well at the pumping rate in each step and to select a pumping rate for the constant rate test. A constant rate test was conducted on all of the wells for 24 hours except for EW-04, described below. Table 3 includes a summary of the aquifer testing timing and setup criteria for this project.

5.2.1 EW-01

Step-rate testing of EW-01 was performed on January 6, 2021. Figure 4 depicts the step-rate test drawdown data, and Table 3 summarizes the step-rate test results. The flow meter did not function during this test and the flow rate was calculated manually. It took approximately 14 minutes before the flow rate was adjusted to be 1.5 gpm for the second step.

Constant-rate testing of EW-01 was performed over January 6 to 7, 2021. A pumping rate of 1.5 gpm was selected for the constant-rate test as it was the rate from the step-rate test data that appeared to have stabilized drawdown.

5.2.2 EW-02

Step-rate testing of EW-02 was performed on January 7, 2021. Figure 5 depicts the step-rate test drawdown data, and Table 4 summarizes the step-rate test results.

Constant-rate testing of EW-02 was performed over January 7 to 8, 2021. A pumping rate of 6.2 gpm was selected for the constant-rate test based on the step-rate test which did not stabilize at 7.2 gpm. There were some uncertainties with the measurement of the flow rate with the flow meter and the selected rate of 6.2 gpm was determined from a review of the bucket test flow rates recorded for each step and the maximum rate estimated to have stabilized drawdown over 24 hours.

5.2.3 EW-03

Step-rate testing of EW-03 was performed on January 9, 2021. Only two steps were completed for this test because the pumping rate of 9.0 gpm selected for the third step caused excessive drawdown, which ended the step-rate test prematurely. Figure 6 depicts the step-rate test drawdown data, and Table 4 summarizes the step-rate test results.

Constant-rate testing of EW-03 was performed over January 9 to 10, 2021. A pumping rate of 5.0 gpm was selected for the constant-rate test as the second step at 7 gpm did not have stabilized drawdown and the final step had rapid drawdown resulting in it being terminated early.

5.2.4 EW-04

Step-rate testing of EW-04 was performed on January 4, 2021. Figure 7 depicts the step-rate test drawdown data, and Table 3 summarizes the step-rate test results. The fourth step at 2.5 gpm did not achieve stabilized drawdown.

Constant-rate testing of EW-04 was performed over January 4 to 5, 2021. A pumping rate of 2.3 gpm was initially selected for the constant-rate test, and the test began at 6:45 a.m. on January 9. The test continued at 2.3 gpm for approximately 12.8 hours, at which point drawdown in the pumping well was only 0.88 ft. A decision was made to increase the flow rate to evaluate maximum sustainable pumping rates for the well. Accordingly, the flow rate was increased to 3.3 gpm, and after pumping the well at 3.3 gpm for 1 hour, the pumping rate was increased to 4.3 gpm. The test continued at 4.3 gpm for an additional 1.5 hours, at which point the flow rate was decreased to 3.9 gpm. The test continued for an additional 8.3 hours at 3.9 gpm before stopping the test pump. Figure 11 shows the constant rate test and recovery data. An analysis of the EW-04 constant-rate test is presented in Section 3.6.

5.2.5 Specific Capacity Data

Table 4 summarizes specific capacity data obtained from the step-rate tests. Specific capacity represents drawdown that is expected to occur in a pumping well for a given pumping rate. For instance, a specific capacity of 1 gpm/ft indicates a pumping rate of 1 gpm will produce 1 ft of drawdown in a pumping well.

As noted in Table 4, specific capacities were not calculated for pumping rates in which drawdown in the pumping well did not stabilize. Specific capacities for the extraction wells range from 0.2 to 5.3 gpm/ft.

5.2.6 Zone of Influence Evaluation

Figures 8 through 10 depict observation point water-level data collected throughout the aquifer tests. Figure 8 depicts water levels at observation points which were influenced by the aquifer tests, and Figure 9 depicts water levels at the new extraction wells during the aquifer tests. Figure 10 depicts water levels at observation points which were not influenced by the aquifer tests. Notable observations from the water level data are summarized as follows:

- EW-01 pumping induced observable drawdown at F-92, EW-02, and EW-03. The farthest observation point to be influenced by EW-01 pumping is EW-03, which is located approximately 280 ft to the southeast.
- EW-02 pumping induced observable drawdown at F-91, F-92, EW-01, EW-03, MW-66A, and Geronimo B. The farthest observation point to be influenced by EW-02 pumping is MW-66A, which is located approximately 560 ft to the west. Declining water levels at Geronimo A during the EW-02 tests suggest this well may also have been influenced by EW-02 pumping, though a definitive connection is not clear from the Geronimo A water level data.
- EW-03 pumping induced observable drawdown at F-91, EW-01, EW-02, MW-66A, Geronimo A, and Geronimo B. The farthest observation point to be influenced by EW-03 pumping is MW-66A, which is located approximately 600 ft to the west. It is likely drawdown was also induced at F-92, but the water level in this piezometer was below the depth of the pressure transducer during the EW-03 aquifer tests [the pressure transducer was set at 20 ft bgs in F-92 due to a blockage in the piezometer at this depth (Section 3.0)].
- EW-04 pumping induced observable drawdown at W-123, which is located approximately 20 ft southeast of EW-04. Observable drawdown did not occur at any other observation points during the EW-04 tests.
- The aquifer tests did not induce drawdown at several alluvial observation points including M-50A, W-126, and F-111. While the lack of drawdown at M-50A and W-126 suggests the zone of influence from pumping did not extend to these wells, the lack of drawdown at F-111 [which is located between Geronimo A and B (two observation points where drawdown was induced)] suggests this piezometer is not in communication with the alluvial aquifer in which EW-02, EW-03, Geronimo A, and Geronimo B are screened. The lack of communication between F-111 and the alluvial aquifer may be caused by a damaged or clogged screen at F-111.
- The aquifer tests did not induce drawdown at W-124, which is screened within the Wupatki member of the Moenkopi Formation, or F-112, which is screened within the Moqui. However, drawdown was induced at F-91 by the EW-02 and EW-03 tests. This piezometer is screened across the contact between the Moqui and the Wupatki. The drawdown at this piezometer suggests there is a hydraulic connection between the alluvial aquifer and the Moqui/Wupatki at F-91, which is likely caused by a damaged annular well seal.

5.3 Aquifer Test Analysis

The aquifer test data was analyzed to assess the radius of influence for each pumping well and estimate local aquifer properties using analytical solutions included in the AQTESOLV (Duffield, 1996) software package. Observation point water-level data was recorded during the aquifer tests and depicted as Figures 8 through 10 and this data was used to evaluate aquifer properties and the zone of influence for each pumping well. The pumping well data for each pumping well was not used in the analysis because the typically the pumping data is impacted by the influence of the pump in the well, as was the case for the wells tested in this report.

Where possible, the solution used to analyze the aquifer test data is based on the assumption of semi-confined conditions for the alluvial aquifer downgradient of the FAP. This assumption is based on the extraction well lithologic logs and the results of cone penetrometer tests performed at the FAP (Wood, 2021), which indicate alternating lenses of fine and coarse-grained alluvial sediments. The coarser-grained sediments are likely confined by the finer-grained sediments, and recharge and discharge likely occurs through the finer-grained sediments. Accordingly, the Hantush-Jacob analytical solution for leaky confined aquifers (1955) was used to analyze the observation point water level data. This solution generally provided the best fit to the observation point water level data. However, in some cases, the Cooper-Jacob method for confined aquifers (1946) and the Theis recovery solution for confined aquifers (1935) provided a better fit to the observation point data. These exceptions are discussed below.

Results of the analyses using AQTESOLV are summarized in Table 5 and described in the following sections. The AQTESOLV analyses are included as Appendix C.

Hydraulic conductivity was estimated from the aquifer test analyses using the following equation:

$$T=kb$$

(T=transmissivity [ft^2/day], k=hydraulic conductivity [ft/day], and b=aquifer thickness [ft])

The aquifer thickness at each well location equates to the vertical distance from the swl to the top of the Moqui. At EW-01, EW-02, and EW-03, the aquifer thickness is estimated as 27 ft, while at EW-04, the aquifer thickness is estimated as 19 ft.

5.3.1 EW-01 Constant-Rate Test Analysis Results

For the EW-01 constant-rate test, drawdown and recovery data collected from F-92 and EW-02 were analyzed using the Hantush-Jacob solution. The analyses produced transmissivities ranging from 63 ft^2/d and 73 ft^2/d and storativity values ranging from 0.0004 and 0.0022 (Table 5 and Appendix C). An assumed aquifer thickness of 27 ft produces hydraulic conductivity estimates of 2 and 3 ft/d. EW-03 was not included in the analysis because even though there was a slight impact to it, this impact was not significant enough to allow for accurate curve matching.

5.3.2 EW-02 Constant-Rate Test Analysis Results

For the EW-02 constant-rate test, drawdown and recovery data collected from MW-66A, EW-01, and EW-03 were analyzed using the Hantush-Jacob solution. The analyses produced transmissivities ranging from 102 ft^2/d and 141 ft^2/d and storativity values ranging from 0.0004 and 0.0023 (Table 5 and Appendix C). An assumed aquifer thickness of 27 ft produces hydraulic conductivity estimates of 4 and 5 ft/d.

5.3.3 EW-03 Constant-Rate Test Analysis Results

For the EW-03 constant-rate test, drawdown data collected from EW-01, Geronimo B, and MW-66A were analyzed using the Hantush-Jacob solution. Recovery data collected from MW-66A were analyzed using the Hantush-Jacob solution, and recovery data collected from EW-01 and Geronimo B were analyzed using the Theis recovery method, which provided a better fit to the recovery data sets. The analyses produced transmissivities ranging from 85 ft^2/d and 115 ft^2/d and storativity values ranging from 0.0004 and 0.017 (Table 5 and Appendix C). An assumed aquifer thickness of 27 ft produces hydraulic conductivity estimates of 3 and 4 ft/d.

5.3.4 EW-04 Constant-Rate Test Analysis Results

For the EW-04 constant-rate test, the late-time drawdown data collected from W-123 (when EW-04 was pumped at 3.9 gpm) were analyzed using the Cooper-Jacob solution, and recovery data collected from W-123 were analyzed using the Hantush-Jacob solution. The analyses produced transmissivity values of 139 ft^2/d and 149 ft^2/d and storativity values of 0.01 and 0.15 (Table 5 and Appendix C). An assumed aquifer thickness of 19 ft produces hydraulic conductivity estimates of 7 and 8 ft/d.

6.0 Groundwater Sampling

Groundwater samples were collected from EW-02 and EW-04 at the end of each well's constant-rate aquifer test. The samples were collected in general accordance with the sampling and analysis plan developed for the site (Montgomery & Associates, 2015). The samples were submitted to Eurofins TestAmerica Laboratories, Inc., an Arizona Department of Health Services-licensed laboratory (AZ0728), for analysis of arsenic, cobalt, fluoride, lithium, molybdenum, iron, and water quality ions.

The laboratory analytical report is included as Appendix D, and Table 6 presents the analytical results. The results are comparable to water quality data that has historically been collected at monitoring well W-123.

7.0 Summary And Recommendations

7.1 Extraction Well Performance

Aquifer tests at the extraction wells induced drawdown at several observation points downgradient of the FAP. Extraction wells EW-01, EW-02, and EW-03 are hydraulically connected to each other and to other alluvial monitoring points. Extraction wells EW-04 and W-123 are hydraulically connected to each other but do not appear to be connected to the other extraction wells or alluvial monitoring points. These wells are completed at shallower depths than the other extraction wells, and it is likely that they are screened within sediments that have limited hydraulic connection with the sediments in which EW-01, EW-02, and EW-03 are screened.

Wood recommends equipping the new extraction wells at the FAP with submersible pumps and incorporating the wells into the existing Geronimo Seepage Intercept System to capture and extract impacted groundwater before it migrates downgradient. Based on the aquifer test data, recommended sustainable pumping rates for each well are as follows:

- EW-01: 1.5 gpm
- EW-02: 5 gpm
- EW-03: 5 gpm
- EW-04: 2.5 gpm

Wood also recommends installing transducers in alluvial wells and piezometers downgradient of the FAP to evaluate the zone of influence created by prolonged operation of the extraction wells. Demonstrating the zone of influence for each extraction well overlaps with the adjacent extraction wells' zone of influence in the alluvial aquifer is considered an essential component of the final remedy for the FAP.

7.2 Saturation in the Moqui

Investigative borings INV-02 and INV-03 identified slight amounts of moisture within gypsum seams in the Moqui at these locations. However, the observed moisture is not likely indicative of saturated conditions in the Moqui along the edges of the FAP dam. This is evidenced by the observation of the Moqui being dry at INV-01, EW-01, EW-02, EW-03, and EW-04. Based on these observations, seepage from the FAP appears to flow primarily through the alluvium.

7.3 Replacement Wells and Piezometers

The EW-04 and INV-01 borings encountered the Moqui at depths of 19 and 22 ft bgs, respectively. Monitoring well W-123, which is located approximately 20 ft west of EW-04, is screened from 14 to 29 ft bgs. Monitoring well W-126, which is located approximately 240 ft northwest INV-01, is screened from 15 to 45 ft bgs. Therefore, it is likely that W-123 and W-126 are partially completed in the Moqui. These wells should be abandoned and replaced with new monitoring wells that are screened within the alluvium.

As previously indicated, the extraction well aquifer tests induced drawdown at Moqui/Wupatki piezometer F-91 but did not induce drawdown at alluvial piezometer F-111. Wood recommends abandoning and replacing F-91 to prevent the migration of alluvial groundwater into the underlying Moenkopi Formation, and abandoning and replacing F-111 with a new alluvial piezometer to monitor the zone of influence of the extraction wells.

7.4 Updated Aquifer Property Data

Where applicable, the hydraulic conductivity, transmissivity, and storativity values derived from the extraction well aquifer tests (Table 5) should be incorporated into future groundwater flow rate calculations and the numerical groundwater model for the FAP.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
N1	See case narrative.

Metals

Qualifier	Qualifier Description
B3	Target analyte detected in calibration blank at or above the method reporting limit.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

1 2 3 4 5 6 7 8 9 10 11 12 13 14

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Comments
No additional comments.

Receipt
The samples were received on 1/11/2021 8:14 AM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.3º C.

HPLC/IC
Method 300.0: A matrix spike / matrix spike duplicate (MS/MSD) was not prepared for Anions by method EPA 300.0 associated with analytical batch 550-231854 due to an analyst error. The results for the associated laboratory control sample/ laboratory control sample duplicate (LCS/LCSD) were within acceptance limits which may be used to verify batch accuracy and precision. As such, these data have been reported and qualified with N1 flags.

EW04-010521 (550-156051-1) and EW02-018521 (550-156051-2)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.8 LL: The continuing calibration blank (CCB) for analytical batch 550-230325 contained Molybdenum above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Sample Summary

Lab Sample ID	Client Sample ID	Matrix	Collected	Received	Asset ID
550-156051-1	EW04-010521	Water	01/05/21 19:38	01/11/21 08:14	
550-156051-2	EW02-018521	Water	01/08/21 20:19	01/11/21 08:14

Appendix H

Wood Technical Memorandum Documenting the Statistical Analysis of Appendix III Constituent Data Collected for the BAM Through October 2020

Technical Memorandum

To:	Arizona Public Service Company	**File No:**	14-2021-2008
From:	Mari Wuollet	**Reviewed by:**	Maren Henley, PE
Date:	April 12, 2021		

Subject: **CCR GROUNDWATER DETECTION MONITORING**
STATISTICAL ANALYSIS AND RESULTS FOR THE BOTTOM ASH MONOFILL
APPENDIX III CONSTITUENT DATA COLLECTED THROUGH OCTOBER 2020
Arizona Public Service Cholla Power Plant – Navajo County, Arizona

1.0 INTRODUCTION

This Technical Memorandum presents the results of a statistical evaluation of groundwater monitoring data collected from monitoring wells downgradient of the Bottom Ash Monofill (BAM) located at the Arizona Public Service Company Cholla Power Plant (Site) in Navajo County, Arizona. The statistical evaluation was performed by Wood Environment and Infrastructure Solutions, Inc.'s (Wood) subcontractor, Geosciences Consulting, LLC (Geosciences Consulting) pursuant to Coal Combustion Residuals (CCR) Rule requirements for groundwater monitoring and corrective action detailed in 40 Code of Federal Regulations Sections 257.90 through 257.98 (Federal Register, 2018).

The BAM is a Site CCR unit that is currently in the detection monitoring program. The CCR Rule requires routine evaluations of Appendix III constituent data collected from BAM downgradient wells to determine if a statistically significant increase (SSI) over background threshold values (BTVs) has occurred. The statistical evaluation documented herein incorporates Appendix III constituent data collected from BAM downgradient wells MW-59, MW-60, and MW-61 through October 2021.

To address an initial exceedance of the fluoride BTV at MW-60 and MW-61 in May 2020, the previous statistical evaluation for the BAM documented in October 2020 recommended implementing a 1 of 3 resampling strategy to determine if the initial fluoride exceedance was statistically significant (Wood, 2020). The October 2020 sampling event constitutes the first resampling event practicable in the 1 of 3 resampling strategy; results of the resampling are presented in Section 2.0.

The evaluation presented in Attachment A also includes routine updates to interwell BTVs based on groundwater sample data available up to the most recent groundwater sampling event (October 2020). The updated BTVs are shown in Table 1 of Attachment A. The ASD recommended intrawell statistical comparisons for fluoride for monitoring wells MW-60 and MW-61 on the premise of spatial heterogeneity. Attachment A presents an analysis of whether updates to intrawell BTVs are appropriate at this time.

2.0 STATISTICAL EVALUATION RESULTS

Attachment A presents the statistical evaluation and BTV recalculations conducted by Geosciences Consulting. The results of the evaluation are summarized as follows:

- There are currently no exceedances or SSIs over BTVs for Appendix III constituents at the BAM downgradient wells. This includes the results of resample events at M-60 and M-61 for Fluoride.

- A statistically significant decreasing temporal trend is evident for boron, calcium and pH at MW-60.

- Based on review of the preliminary Exploratory Data Analysis for forthcoming updates to the intrawell BTVs for fluoride, results indicate there is insufficient evidence to conclude the two sample populations are statistically different (2015 to 2017, and 2017 to present) and it is practical to combine more recent sample data with historical data to make the interwell BTVs more representative of future sample values.

3.0 RECOMMENDATIONS

Based on the results of the statistical evaluation presented in Attachment A and pursuant to the CCR Rule, continuation of detection monitoring at a semiannual frequency for Appendix III constituents at the BAM is warranted because there are currently no SSIs over Appendix III constituent BTVs. Wood also recommends trend testing after each monitoring event and updates to the BTVs after 1-2 years of future sampling events.

Subject: **CCR Groundwater Detection Monitoring**
Statistical Evaluation of October 2020 & Preceding Bottom Ash Monofill Data
Arizona Public Service Cholla Power Plant – Navajo County, Arizona

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) documents the ongoing statistical evaluation of detection monitoring (i.e., Appendix III constituents) groundwater data associated with the Bottom Ash Monofill (BAM) located at the Arizona Public Service (APS) Cholla Power Plant (Cholla) in Navajo County, Arizona. This routine statistical evaluation is completed by Geoscience Consulting Strategies LLC in accordance with the *Statistical Data Analysis Work Plan* (SDAWP) for the Cholla Power Plant and the Coal Combustion Residuals (CCR) Rule (Federal Register, 2018; Wood Environment & Infrastructure Solutions, Inc. [Wood], 2018).

The statistical evaluation documented herein incorporates the results of detection monitoring at the BAM through October 2020. The Background Threshold Values (BTVs) in this Tech Memo recognize recommendations put forth in the Alternative Source Demonstration to address historic statistically significant increases in fluoride concentrations over BTVs at the BAM (Wood 2019a, Wood 2019b).

The following sections present data inputs, statistical methods, results and recommendations for the subject analysis.

2.0 DATA INPUTS

The BAM groundwater monitoring well network consists of one background monitoring well (M-54) and three compliance (i.e., downgradient), monitoring wells (M-59, M-60 and M-61). The period of evaluation for this BAM Appendix III constituent statistical analysis ranges from December 2015 through October 2020 and includes the minimum of eight initial, or baseline, sampling rounds and seven subsequent sampling rounds of detection monitoring. Due principally to the CCR Rule requirement that a minimum of eight initial rounds of data be collected from the site prior to October 17, 2017, the frequency of sample collection prior to this date is short and variable (e.g., biweekly to quarterly sampling).

This data evaluation evaluates 20 samples for boron, calcium, chloride, sulfate and total dissolved solids (TDS) within each compliance monitoring well and 19 samples for pH within each compliance monitoring

PO Box 160362
Sacramento, CA 95816
Tel: 918-809-2634

well. For fluoride, there are 20 samples available for analysis at each monitoring location except for M-61, where there are 21 samples. The sampling rounds of detection monitoring at the BAM occur semi-annually.

Appendix A contains the contents of the ProUCL data upload tables for the subject analysis. Data inputs for this statistical analysis were prepared, and provided by, Wood. The Appendix III analytes are listed by name or chemical symbol as column headers in the ProUCL data upload table. By ProUCL convention, each analyte has a corresponding data column (indicated with a "D_" prefix) that indicates if the analyte was detected or not at a concentration that exceeds the analytical reporting limit, where detectable concentrations are symbolized by a "1" and non-detectable concentrations are symbolized by a "0." The detection frequency is 100% for all sample data listed in Appendix A.

3.0 METHODS

The statistical methods and analysis approach used to evaluate BAM Appendix III constituent data are documented in the SDAWP (Wood, 2018) prepared for the site.

Precursor exploratory data analysis (EDA) is necessary to help assure that groundwater sample comparisons to their respective BTVs are valid. EDA includes box and whisker plots generation, goodness of fit testing, Mann-Kendall trend testing, and outlier testing. EDA results are shown in Appendix B.

Table 1 details the not to exceed BTVs and method of calculation for the BAM. Table 1 reflects updates to the interwell BTVs to reflect groundwater samples between December 2015 through October 2020 in addition to recommendations put forth in the 2019 ASD for the BAM (Wood, 2019b).

Updates to intrawell BTVs are important and relevant but need special consideration since they incorporate compliance data and "background", or "baseline", data within the same well to calculate a new BTV. The premise for updating an intrawell BTV is to ensure the "background" or "baseline" statistical population is representative of the future sample population expected from the groundwater monitoring well, assuming no groundwater impact is occurring from the BAM. The US EPA suggests updating intrawell BTVs using the following criteria:

- At least 4 – 8 intrawell compliance samples are available;
- There are no SSI declarations when comparing intrawell compliance samples to the established intrawell BTV; and
- A Student's t-test or Wilcoxon rank-sum test between the intrawell BTV statistical sample population and the intrawell statistical compliance population shows no significant difference ($p < 0.01$).

Provided the US EPA guidance above, preliminary EDA was performed as part of this statistical evaluation to assess if intrawell BTV updates are viable for the BAM.

4.0 RESULTS

Table 2 summarizes: 1) which Appendix III constituents exhibit exceedances above their respective BTVs by compliance well and 2) which constituents exhibit statistically significant temporal trends.

Appendix B and Appendix C contain the raw ProUCL EDA outputs as reference for the following statistical findings:

Monitoring Well M-59. There are no exceedances of Appendix III constituent concentrations over their respective BTVs for the October 2020 sampling event. For sampling events occurring through October

2020, there are no significant ($p<0.05$) temporal trends for Appendix III constituents at this monitoring location.

Monitoring Well M-60. The October 2020 sampling event results in no exceedances of Appendix III constituent concentrations over their respective BTVs. There are statistically significant ($p<0.05$) decreasing time series trend for boron, calcium and pH at this location resulting from the addition of the October 2020 sample.

Monitoring Well M-61. The October 2020 sampling event results in no exceedances of Appendix III constituent concentrations over their respective BTVs. For sampling events occurring through October 2020, there are no significant ($p<0.05$) temporal trends for Appendix III constituents at this monitoring location.

Preliminary Intrawell Exploratory Data Analysis: Appendix C includes preliminary EDA outputs for performing forthcoming updates to the intrawell BTVs for fluoride. The goodness of fit statistics indicate fluoride exhibits a non-parametric distribution, making a Wilcoxon rank-sum comparison appropriate between “background” or “baseline” (e.g., sample data from 2005 to 2017) and compliance (e.g., sample data from 2017 to current) sample datasets at the 99% confidence level. Results indicate there is insufficient evidence to conclude the two sample populations are statistically different and it is practical to combine more recent sample data with historic data in an effort to make the intrawell BTVs more representative of future sample values. The box and whisker plots put forth as part of Appendix C provide a qualitative representation of these comparisons.

5.0 CONCLUSIONS

The October 2020 Appendix III sample concentrations are beneath their respective BTVs at M-59, M-60 and M-61. The BAM should continue Detection Monitoring in accordance with 40 Code of Federal Regulations Section 257.95(f) (Federal Register, 2018).

Background Well	Dates Corresponding to Data Used to Derive UPL	Constituent	BTV (Calculation Method)	Units	Resampling Strategy[1]
M-54	12/3/2015-10/21/2020	Boron	0.55 (P-UPLT)	mg/L	1 of 2
M-54	12/3/2015-10/21/2020	Calcium	101 (NP-UPLT)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	Chloride	1,600 (NP-UPL)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	Fluoride	1.8 (NP-UPL)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	pH (upper limit)	7.8 (P-UPL)	SU	1 of 2
M-54	12/3/2015-10/21/2020	pH (lower limit)	7.3 (P-LPL)	SU	1 of 2
M-54	12/3/2015-10/21/2020	Sulfate	380 (NP-UPL)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	TDS	3225 (P-UPL)	mg/L	1 of 2

Compliance Well	Dates Corresponding to Data Used to Derive UPL	Constituent	Intrawell UPL (Calculation Method[1])	Units	Resampling Strategy
M-60	12/3/15-9/5/2017	Fluoride	1.5 (NP-UPL)	mg/L	1 of 3
M-61	12/3/15-9/5/2017	Fluoride	1.5 (NP-UPL)	mg/L	1 of 3

Notes:

BAM = Bottom Ash Pond
BTV = background threshold value
LPL = lower prediction limit
mg/L = milligrams per liter
NP = Non Parametric
P = Parametric
SU = standard units
TDS = total dissolved solids
UPL = upper predicition limit

[1] A 1 of 2 resampling strategy is in place for parametric prediction limits. A 1 of 3 resampling strategy is in place for non-parametric prediction limits and the limit represents the maximum concentration value of the data set (i.e., maximum order statistic). The BTV for calcium represents the second highest concentration value because the maximum concentration value is a percieved outlier and was removed from the evaluation.

2. Observation Value 82 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.250

For 10% significance level, 82 is not an outlier.
For 5% significance level, 82 is not an outlier.
For 1% significance level, 82 is not an outlier.

Dixon's Outlier Test for Calcium (m-61)

Number of Observations = 20
10% critical value: 0.401
5% critical value: 0.45
1% critical value: 0.535

1. Observation Value 94 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.143

For 10% significance level, 94 is not an outlier.
For 5% significance level, 94 is not an outlier.
For 1% significance level, 94 is not an outlier.

2. Observation Value 86 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.143

For 10% significance level, 86 is not an outlier.
For 5% significance level, 86 is not an outlier.
For 1% significance level, 86 is not an outlier.

Dixon's Outlier Test for pH (m-59)

Number of Observations = 19
10% critical value: 0.412

Appendix B
Outlier Statistics

5% critical value: 0.45
5% critical value: 0.462
1% critical value: 0.547

1. Observation Value 8.1 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.500

For 10% significance level, 8.1 is an outlier.
For 5% significance level, 8.1 is an outlier.
For 1% significance level, 8.1 is not an outlier.

2. Observation Value 7.5 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

For 10% significance level, 7.5 is not an outlier.
For 5% significance level, 7.5 is not an outlier.
For 1% significance level, 7.5 is not an outlier.

Dixon's Outlier Test for pH (m-60)

Number of Observations = 19
10% critical value: 0.412
5% critical value: 0.462
1% critical value: 0.547

1. Observation Value 8 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.400

For 10% significance level, 8 is not an outlier.
For 5% significance level, 8 is not an outlier.
For 1% significance level, 8 is not an outlier.

2. Observation Value 7.5 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

Appendix B
Outlier Statistics

5% critical value: 0.45
For 10% significance level, 7.5 is not an outlier.
For 5% significance level, 7.5 is not an outlier.
For 1% significance level, 7.5 is not an outlier.

Dixon's Outlier Test for pH (m-61)

Number of Observations = 19
10% critical value: 0.412
5% critical value: 0.462
1% critical value: 0.547

1. Observation Value 8 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.400

For 10% significance level, 8 is not an outlier.
For 5% significance level, 8 is not an outlier.
For 1% significance level, 8 is not an outlier.

2. Observation Value 7.22 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.483

For 10% significance level, 7.22 is an outlier.
For 5% significance level, 7.22 is an outlier.
For 1% significance level, 7.22 is not an outlier.

Dixon's Outlier Test for Sulfate (m-59)

Number of Observations = 20
10% critical value: 0.401
5% critical value: 0.45
1% critical value: 0.535

1. Observation Value 370 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.333

Appendix B
Outlier Statistics

5% critical value: 0.45

For 10% significance level, 370 is not an outlier.
For 5% significance level, 370 is not an outlier.
For 1% significance level, 370 is not an outlier.

2. Observation Value 330 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.333

For 10% significance level, 330 is not an outlier.
For 5% significance level, 330 is not an outlier.
For 1% significance level, 330 is not an outlier.

Dixon's Outlier Test for Sulfate (m-60)

Number of Observations = 20
10% critical value: 0.401
5% critical value: 0.45
1% critical value: 0.535

1. Observation Value 440 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.889

For 10% significance level, 440 is an outlier.
For 5% significance level, 440 is an outlier.
For 1% significance level, 440 is an outlier.

2. Observation Value 340 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.500

For 10% significance level, 340 is an outlier.
For 5% significance level, 340 is an outlier.
For 1% significance level, 340 is not an outlier.

Dixon's Outlier Test for Sulfate (m-61)

Appendix B
Outlier Statistics

5% critical value: 0.45

Number of Observations = 20
10% critical value: 0.401
5% critical value: 0.45
1% critical value: 0.535

1. Observation Value 420 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.500

For 10% significance level, 420 is an outlier.
For 5% significance level, 420 is an outlier.
For 1% significance level, 420 is not an outlier.

2. Observation Value 340 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

For 10% significance level, 340 is not an outlier.
For 5% significance level, 340 is not an outlier.
For 1% significance level, 340 is not an outlier.

Wood Technical Memorandum Documenting the Statistical Analysis of Appendix III Constituent Data Collected for the BAM Through July 2021

Technical Memorandum

To:	Arizona Public Service Company	**File No:**	14-2021-2008
From:	Mari Wuollet	**Reviewed by:**	Maren Henley, PE
Date:	October 13, 2021		

Subject: **CCR GROUNDWATER DETECTION MONITORING**
STATISTICAL ANALYSIS AND RESULTS FOR THE BOTTOM ASH MONOFILL
APPENDIX III CONSTITUENT DATA COLLECTED THROUGH JULY 2021
Arizona Public Service Company Cholla Power Plant – Navajo County, Arizona

1.0 INTRODUCTION

This Technical Memorandum presents the results of a statistical evaluation of groundwater monitoring data collected from monitoring wells downgradient of the Bottom Ash Monofill (BAM) located at the Arizona Public Service Company (APS) Cholla Power Plant (Site) in Navajo County, Arizona. The statistical evaluation was performed by Geosciences Consulting LLC (Geosciences Consulting), a subcontractor to Wood Environment and Infrastructure Solutions, Inc. (Wood) pursuant to Coal Combustion Residuals (CCR) Rule requirements for groundwater monitoring and corrective action detailed in 40 Code of Federal Regulations Sections 257.90 through 257.98 (CCR Rule) (Federal Register, 2020).

The BAM is a Site CCR unit that is currently in the detection monitoring program. The CCR Rule requires semiannual evaluations of Appendix III constituent data collected from BAM downgradient wells on an ongoing basis to determine if a statistically significant increase (SSI) over background threshold values (BTVs) has occurred. The statistical evaluation documented herein incorporates Appendix III constituent data collected from BAM downgradient wells MW-59, MW-60, and MW-61 through July 2021.

To address an initial exceedance of the total dissolved solids (TDS) BTV at MW-60 in April 2021, in accordance with the *Statistical Data Analysis Workplan* (SDAWP) developed for the Site and the US EPA's Unified Guidance (Wood, 2018; US EPA 2009), a 1 of 2 resampling strategy was implemented in July 2021. The detection results for TDS at MW-60 of the July 2021 resampling event fell under the associated BTV, and therefore the initial exceedance was determined to be statistically insignificant. Details of the detection results are presented in Section 2.0.

In addition, Attachment A includes updates to intrawell BTVs for fluoride in MW-60 and MW-61 based on groundwater sample data available up to the most recent semiannual groundwater sampling event (April 2021). The updated BTVs are shown in Table 1 of Attachment A and summarized in Section 2.0.

www.woodplc.com

2.0 STATISTICAL EVALUATION RESULTS

Attachment A presents the statistical evaluation and BTV recalculations conducted by Geosciences Consulting. The results of the evaluation are summarized as follows:

- In April 2021 TDS was detected at 4,200 mg/L at MW-60 over the TDS BTV of 3,225 mg/L but was detected at 2,700 mg/L in July 2021; therefore, the initial exceedance is statistically insignificant.

- There are currently no SSIs over BTVs for Appendix III constituents at the BAM downgradient wells. This includes the results of the July 2021 resample event at M-60 for TDS.

- A statistically significant decreasing temporal trend is evident for boron and calcium at MW-60.

- As recommended in previous Technical Memorandums, the intrawell BTVs for fluoride at MW-60 and MW-61 have been updated to 1.7 mg/L and 1.6 mg/L respectively, with a 1 of 2 resampling strategy for both wells (Wood, 2019a; Wood, 2019b; Wood, 2019c; Wood, 2021).

3.0 RECOMMENDATIONS

Based on the results of the statistical evaluation presented in Attachment A and pursuant to the CCR Rule, continuation of detection monitoring at a semiannual frequency for Appendix III constituents at the BAM is warranted because there are currently no SSIs over Appendix III constituent BTVs. Wood also recommends trend testing after each monitoring event and updates to the BTVs after 1-2 years of future sampling events.

Subject: **CCR Groundwater Detection Monitoring**
Statistical Evaluation of April 2021 & Preceding Bottom Ash Monofill Data
Arizona Public Service Company Cholla Power Plant – Navajo County, Arizona

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) documents the ongoing statistical evaluation of detection monitoring (i.e., Appendix III constituents) groundwater data associated with the Bottom Ash Monofill (BAM) located at the Arizona Public Service Company (APS) Cholla Power Plant (Cholla) in Navajo County, Arizona. This routine statistical evaluation is completed by Geoscience Consulting Strategies LLC in accordance with the *Statistical Data Analysis Work Plan* (SDAWP) for the Cholla Power Plant and the Coal Combustion Residuals (CCR) Rule (Federal Register, 2018; Wood Environment & Infrastructure Solutions, Inc. [Wood], 2018).

The statistical evaluation documented herein incorporates the results of detection monitoring at the BAM through April 2021. The Background Threshold Values (BTVs) in this Tech Memo recognize recommendations put forth in: 1) the Alternative Source Demonstration to address historical statistically significant increases in fluoride concentrations over BTVs at the BAM (Wood 2019a, Wood 2019b) and 2) the preceding April 2019 Tech Memo that set a working basis for updating these BTVs (Wood, 2021).

The following sections present data inputs, statistical methods, results and recommendations for the subject analysis.

2.0 DATA INPUTS

The BAM groundwater monitoring well network consists of one background monitoring well (M-54) and three compliance (i.e., downgradient) monitoring wells (M-59, M-60 and M-61).

The BAM detection monitoring program performs statistical evaluations semi-annually. The period of evaluation for the subject analysis ranges from December 2015 through April 2021 and includes:

1) the minimum of eight initial, or baseline, sampling rounds required by the CCR Rule and five subsequent sampling rounds of detection monitoring that occur on a semi-annual frequency; and

PO Box 160362
Sacramento, CA 95816
Tel: 918-809-2634

2) a July 2021 resampling event triggered by an in initial exceedance for total dissolved solids (TDS) during the April 2021 sampling event (see Table 1).

Due principally to the CCR Rule requirement that a minimum of eight initial rounds of data be collected from the site prior to October 17, 2017, the frequency of sample collection prior to this date is short and variable (e.g., biweekly to quarterly sampling).

This data evaluation evaluates between 20 and 22 samples for boron, calcium, chloride, sulfate, pH and TDS within each compliance monitoring well.

Appendix A contains the contents of the ProUCL data upload tables for the subject analysis. Data inputs for this statistical analysis were prepared, and provided by, Wood. The Appendix III analytes are listed by name or chemical symbol as column headers in the ProUCL data upload table. By ProUCL convention, each analyte has a corresponding data column (indicated with a "D_" prefix) that indicates if the analyte was detected or not at a concentration that exceeds the analytical reporting limit, where detectable concentrations are symbolized by a "1" and non-detectable concentrations are symbolized by a "0." The detection frequency is 100% for all sample data listed in Appendix A.

3.0 METHODS

The statistical methods and analysis approach used to evaluate BAM Appendix III constituent data are documented in the SDAWP (Wood, 2018) prepared for the site.

Preliminary exploratory data analysis (EDA) is necessary to help assure that groundwater sample comparisons to their respective BTVs are valid. EDA includes box and whisker plots generation, goodness of fit testing, Mann-Kendall trend testing, and outlier testing. EDA results are shown in Appendix B.

Table 1 details the not-to-exceed BTVs and method of calculation for the BAM. Table 1 reflects updates to the intrawell (same well) fluoride BTVs to reflect groundwater samples between December 2015 through April 2021. The premise and justification for the intrawell updates are put forth in previous Technical Memorandums (see Wood, 2019b; Wood, 2019c; Wood, 2021).

4.0 RESULTS

Table 2 summarizes: 1) which Appendix III constituents exhibit exceedances above their respective BTVs by compliance well and 2) which constituents exhibit statistically significant temporal trends.

Appendix B contains the raw ProUCL EDA outputs as reference for the following statistical findings:

Monitoring Well M-59. The Appendix III constituent concentrations at this monitoring location do not show exceedances over their respective BTVs for the April 2021 sampling event. For sampling events occurring through April 2021, there are no significant ($p<0.05$) temporal trends for Appendix III constituents at this monitoring location.

Monitoring Well M-60. The April 2021 sampling event resulted in an initial exceedance for TDS. Referencing Table 1, TDS follows a 1 of 2 resampling strategy. To declare the April 2021 initial exceedance statistically significant ($p<0.05$), both the initial exceedance and a consecutive statistically independent resample must exceed the TDS BTV. The resampling event on July 7, 2021 shows a TDS value below the

BTV for this monitoring location, thereby declaring the initial exceedance statistically insignificant. The remaining Appendix III constituent concentrations do not show exceedances over their respective BTVs for the April 2021 sampling event. There are statistically significant ($p<0.05$) decreasing time series trend for boron and calcium at this location for the April 2021 sample event.

Monitoring Well M-61. The Appendix III constituent concentrations at this monitoring location do not show exceedances over their respective BTVs for the April 2021 sampling event. There are no significant ($p<0.05$) temporal trends for Appendix III constituents at this monitoring location for the April 2021 sampling event.

Intrawell BTV Updates: The intrawell BTV updates for fluoride in MW-60 and MW-61 reflect a non-parametric UPL with a 1 of 2 (Xn) resampling strategy (see Table 2); essentially, the maximum previous concentration considered to be background in the fluoride time series for the respective monitoring wells. The calculated intrawell UPLs achieve a 95% confidence level and represent 'good' statistical power, per defined by the US EPA Unified Guidance (US EPA, 2009).

5.0 CONCLUSIONS

The April 2021 Appendix III sample concentrations for boron, calcium, chloride, sulfate, field pH and fluoride are beneath their respective BTVs at M-59, M-60 and M-61. The July 2021 resampling event determined the initial exceedance for TDS at MW-60 was statistically insignificant. The TDS concentrations at MW-59 and MW-61 fell below their respective BTVs.

The results herein indicate the BAM should continue Detection Monitoring in accordance with 40 Code of Federal Regulations Section 257.95(f) (Federal Register, 2018).

Appendix III Statistical Analysis

Background Well	Dates Corresponding to Data Used to Derive UPL	Constituent	BTV (Calculation Method)	Units	Resampling Strategy[1]
M-54	12/3/2015-10/21/2020	Boron	0.55 (P-UPLT)	mg/L	1 of 2
M-54	12/3/2015-10/21/2020	Calcium	101 (NP-UPLT)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	Chloride	1,600 (NP-UPL)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	Fluoride	1.8 (NP-UPL)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	pH (upper limit)	7.8 (P-UPL)	SU	1 of 2
M-54	12/3/2015-10/21/2020	pH (lower limit)	7.3 (P-LPL)	SU	1 of 2
M-54	12/3/2015-10/21/2020	Sulfate	380 (NP-UPL)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	TDS	3225 (P-UPL)	mg/L	1 of 2

Compliance Well	Dates Corresponding to Data Used to Derive UPL	Constituent	Intrawell UPL (Calculation Method[1])	Units	Resampling Strategy
M-60	12/3/15-4/16/2021	Fluoride	1.7 (NP-UPL)	mg/L	1 of 2
M-61	12/3/15-4/16/2021	Fluoride	1.6 (NP-UPL)	mg/L	1 of 2

Notes:
BAM = Bottom Ash Pond
BTV = background threshold value
LPL = lower prediction limit
mg/L = milligrams per liter
NP = Non Parametric
P = Parametric
SU = standard units
TDS = total dissolved solids
UPL = upper predicition limit

[1] A 1 of 2 resampling strategy is in place for interwell parametric prediction limits. A 1 of 2 or a 1 of 3 resampling strategy is in place for non-parametric prediction limits and the limit represents the second highest concentration (i.e., second-order) value or the maximum concentration value of the data set (i.e., maximum order statistic), respectively. The BTV for calcium represents the second highest concentration value because the maximum concentration value is a percieved outlier and was removed from the evaluation.

Dixon's Outlier Test for Boron (m-59)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 0.53 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.400

For 10% significance level, 0.53 is an outlier.
For 5% significance level, 0.53 is not an outlier.
For 1% significance level, 0.53 is not an outlier.

2. Observation Value 0.48 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

For 10% significance level, 0.48 is not an outlier.
For 5% significance level, 0.48 is not an outlier.
For 1% significance level, 0.48 is not an outlier.

Dixon's Outlier Test for Boron (m-60)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 0.54 is a Potential Outlier (Upper Tail)?

Appendix B
Outlier Statistics

5% critical value: 0.44
Test Statistic: 0.200

For 10% significance level, 0.54 is not an outlier.
For 5% significance level, 0.54 is not an outlier.
For 1% significance level, 0.54 is not an outlier.

2. Observation Value 0.48 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.200

For 10% significance level, 0.48 is not an outlier.
For 5% significance level, 0.48 is not an outlier.
For 1% significance level, 0.48 is not an outlier.

Dixon's Outlier Test for Boron (m-61)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 0.52 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.250

For 10% significance level, 0.52 is not an outlier.
For 5% significance level, 0.52 is not an outlier.
For 1% significance level, 0.52 is not an outlier.

2. Observation Value 0.48 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

For 10% significance level, 0.48 is not an outlier.
For 5% significance level, 0.48 is not an outlier.
For 1% significance level, 0.48 is not an outlier.

Appendix B
Outlier Statistics

5% critical value: 0.44

Dixon's Outlier Test for Calcium (m-59)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 93 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.375

For 10% significance level, 93 is not an outlier.
For 5% significance level, 93 is not an outlier.
For 1% significance level, 93 is not an outlier.

2. Observation Value 84 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.167

For 10% significance level, 84 is not an outlier.
For 5% significance level, 84 is not an outlier.
For 1% significance level, 84 is not an outlier.

Dixon's Outlier Test for Calcium (m-60)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 92 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.250

For 10% significance level, 92 is not an outlier.
For 5% significance level, 92 is not an outlier.
For 1% significance level, 92 is not an outlier.

Appendix B
Outlier Statistics

5% critical value: 0.44

2. Observation Value 82 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.250

For 10% significance level, 82 is not an outlier.
For 5% significance level, 82 is not an outlier.
For 1% significance level, 82 is not an outlier.

Dixon's Outlier Test for Calcium (m-61)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 94 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.143

For 10% significance level, 94 is not an outlier.
For 5% significance level, 94 is not an outlier.
For 1% significance level, 94 is not an outlier.

2. Observation Value 86 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.143

For 10% significance level, 86 is not an outlier.
For 5% significance level, 86 is not an outlier.
For 1% significance level, 86 is not an outlier.

Dixon's Outlier Test for pH (m-59)

Number of Observations = 20
10% critical value: 0.401
5% critical value: 0.45
1% critical value: 0.535

Appendix B
Outlier Statistics

5% critical value: 0.44

1. Observation Value 8.1 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.500

For 10% significance level, 8.1 is an outlier.
For 5% significance level, 8.1 is an outlier.
For 1% significance level, 8.1 is not an outlier.

2. Observation Value 7.5 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

For 10% significance level, 7.5 is not an outlier.
For 5% significance level, 7.5 is not an outlier.
For 1% significance level, 7.5 is not an outlier.

Dixon's Outlier Test for pH (m-60)

Number of Observations = 20
10% critical value: 0.401
5% critical value: 0.45
1% critical value: 0.535

1. Observation Value 8 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.400

For 10% significance level, 8 is not an outlier.
For 5% significance level, 8 is not an outlier.
For 1% significance level, 8 is not an outlier.

2. Observation Value 7.5 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

For 10% significance level, 7.5 is not an outlier.
For 5% significance level, 7.5 is not an outlier.

Appendix B
Outlier Statistics

5% critical value: 0.44
For 1% significance level, 7.5 is not an outlier.

Dixon's Outlier Test for pH (m-61)

Number of Observations = 20
10% critical value: 0.401
5% critical value: 0.45
1% critical value: 0.535

1. Observation Value 8 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.400

For 10% significance level, 8 is not an outlier.
For 5% significance level, 8 is not an outlier.
For 1% significance level, 8 is not an outlier.

2. Observation Value 7.22 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.483

For 10% significance level, 7.22 is an outlier.
For 5% significance level, 7.22 is an outlier.
For 1% significance level, 7.22 is not an outlier.

Dixon's Outlier Test for Sulfate (m-59)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 370 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.333

For 10% significance level, 370 is not an outlier.

Appendix B
Outlier Statistics

5% critical value: 0.44
For 5% significance level, 370 is not an outlier.
For 1% significance level, 370 is not an outlier.

2. Observation Value 330 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.333

For 10% significance level, 330 is not an outlier.
For 5% significance level, 330 is not an outlier.
For 1% significance level, 330 is not an outlier.

Dixon's Outlier Test for Sulfate (m-60)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 440 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.800

For 10% significance level, 440 is an outlier.
For 5% significance level, 440 is an outlier.
For 1% significance level, 440 is an outlier.

2. Observation Value 340 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

For 10% significance level, 340 is not an outlier.
For 5% significance level, 340 is not an outlier.
For 1% significance level, 340 is not an outlier.

Dixon's Outlier Test for Sulfate (m-61)

Number of Observations = 21

Appendix B
Outlier Statistics

5% critical value: 0.44
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 420 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.500

For 10% significance level, 420 is an outlier.
For 5% significance level, 420 is an outlier.
For 1% significance level, 420 is not an outlier.

2. Observation Value 340 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.000

For 10% significance level, 340 is not an outlier.
For 5% significance level, 340 is not an outlier.
For 1% significance level, 340 is not an outlier.

Dixon's Outlier Test for TDS (m-59)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 2900 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.500

For 10% significance level, 2900 is an outlier.
For 5% significance level, 2900 is an outlier.
For 1% significance level, 2900 is not an outlier.

2. Observation Value 2500 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.667

Appendix B
Outlier Statistics

5% critical value: 0.44

For 10% significance level, 2500 is an outlier.
For 5% significance level, 2500 is an outlier.
For 1% significance level, 2500 is an outlier.

Dixon's Outlier Test for TDS (m-60)

Number of Observations = 22
10% critical value: 0.382
5% critical value: 0.43
1% critical value: 0.514

1. Observation Value 4200 is a Potential Outlier (Upper Tail)?

Test Statistic: 0.867

For 10% significance level, 4200 is an outlier.
For 5% significance level, 4200 is an outlier.
For 1% significance level, 4200 is an outlier.

2. Observation Value 2500 is a Potential Outlier (Lower Tail)?

Test Statistic: 0.500

For 10% significance level, 2500 is an outlier.
For 5% significance level, 2500 is an outlier.
For 1% significance level, 2500 is not an outlier.

Dixon's Outlier Test for TDS (m-61)

Number of Observations = 21
10% critical value: 0.391
5% critical value: 0.44
1% critical value: 0.524

1. Observation Value 3000 is a Potential Outlier (Upper Tail)?

Appendix B
Outlier Statistics

5% critical value: 0.44							
Test Statistic: 0.000							
For 10% significance level, 3000 is not an outlier.							
For 5% significance level, 3000 is not an outlier.							
For 1% significance level, 3000 is not an outlier.							
2. Observation Value 2600 is a Potential Outlier (Lower Tail)?							
Test Statistic: 0.250							
For 10% significance level, 2600 is not an outlier.							
For 5% significance level, 2600 is not an outlier.							
For 1% significance level, 2600 is not an outlier.
