1.0 Introduction

This Annual Groundwater Monitoring and Corrective Action Report for 2021 (Annual Report) was prepared on behalf of Arizona Public Service Company (APS) by Wood Environment & Infrastructure Solutions, Inc. (Wood) for the Cholla Power Plant (Cholla or the Site) located in Navajo County, Arizona. The Annual Report summarizes groundwater monitoring and corrective action data collected to support compliance with coal combustion residuals (CCR) groundwater monitoring and corrective action requirements detailed in 40 Code of Federal Regulations (CFR) Part 257 (herein referred to as the CCR Rule) (Federal Register, 2020).

The CCR Rule became effective on October 19, 2015 and established standards for the disposal of CCR in landfills and surface impoundments (CCR units). In particular, the CCR Rule set forth groundwater monitoring and corrective action requirements for CCR units. The CCR Rule includes the requirement that an "annual groundwater monitoring and corrective action report" be prepared by January 31 for the preceding calendar year (the reporting period). This Annual Report prepared for the 2021 calendar year is intended to document the status of the groundwater monitoring and corrective action programs for each CCR unit, summarize key actions completed, and forecast key activities for 2022. APS additionally considers this report to meet the semiannual reporting requirement of 40 CFR §257.97(a) for selecting and designing remedies pursuant to the CCR Rule during the last half of 2021.

The remainder of this section (Section 1.0) provides a summary description of the power generating facility, the CCR units present at the facility, and the facility's environmental setting which forms the basis for assessment of underlying groundwater conditions. Section 2.0 presents key groundwater monitoring and corrective action activities performed during the reporting period. Sections 3.0 and 4.0 summarize in further detail the activities performed for the groundwater monitoring and corrective action programs respectively during the reporting period. Key activities identified for the upcoming year are presented in Section 5.0. Section 6.0 presents report references.

1.1 Site Background

1.1.1 Facility and CCR Unit Description

Facility Description. Cholla is a coal-fired power plant that had two electric generating units (Units 1 and 3) in operation during 2021. Units 1 and 3 with a combined nameplate capacity of 425.9 megawatts are owned and operated by APS. Unit 4 was retired on December 24, 2020. Coal burned at the plant was previously sourced from the McKinley Mine in New Mexico. When the McKinley Mine closed in 2009, the source of coal switched to the Lee Ranch and El Segundo mines near Grants, New Mexico.

Facility Location. The plant and associated infrastructure are located on land owned/leased by APS adjacent to Interstate 40 (I-40) between the City of Winslow and the City of Holbrook in Navajo County, Arizona (Figure 1-1). The plant sits next to Cholla Reservoir, a cooling pond for Unit 1 and water storage reservoir for the plant that was originally constructed in the early 1900s by the Joseph City Irrigation Company (Shilling, 2005) but was more recently configured in its current location and design by APS in 1961. Cholla Reservoir receives deliveries of groundwater pumped from the nearby Cholla Well Field extracting from the Coconino Sandstone Aquifer. The typical water surface elevation of Cholla Reservoir is 5,022 feet (ft) above mean sea level (amsl).

CCR Unit Description. Plant infrastructure includes four single CCR units referred to as the Fly Ash Pond (FAP), Bottom Ash Pond (BAP), Bottom Ash Monofill (BAM), and Sedimentation Pond (SEDI). All the CCR units except the SEDI are located north of I-40 (Figure 1-2). The SEDI was the first of the CCR units placed into service in 1976. The FAP and BAP dams were completed in 1978, and the BAM came into operation in the late 1990s. Table 1-1 summarizes the location, function, operation, size/construction, and history of each unit. The boundaries of CCR units depicted in Figure 1-2 are based on available historical plans for the units.

1.1.2 Environmental Setting

Unless otherwise noted, the following information is abstracted from Montgomery & Associates (2011), Montgomery & Associates (2017), and AMEC Environment & Infrastructure, Inc. (2012).

Climate. The plant is located in an arid climate within the Little Colorado River Basin. The area receives an average of 6 to 12 inches of precipitation annually. The evaporation rate exceeds the rate of precipitation by an order of magnitude.

Topography. Cholla is located at an average elevation of approximately 5,025 ft amsl in the Colorado Plateau physiographic province of northeastern Arizona. This area is characterized by canyons, high elevations, and narrow, widely spaced riverbeds. The topography of the plant area is characterized by rolling terrain, open vistas, and incised drainages/arroyos. In the vicinity of the plant, the ground surface gently slopes towards the Little Colorado River to the south at approximately 60 ft per mile; however, surface drainage immediately near Cholla Reservoir flows towards the reservoir. About two miles north and south of the plant, the ground surface rises out of the alluvial floodplain to an elevation of 5,100 to 5,200 ft amsl.

Surface Water Hydrology. The plant is located north of the Little Colorado River within the Middle Little Colorado watershed. The Little Colorado River is a meandering, perennial stream with intermittent reaches in a large alluvial floodplain.

Site Geology. The Colorado Plateau, on which the plant is located, is typified by horizontal layered sequences of sedimentary rock, primarily sandstones, siltstones, and claystones. At the plant and nearby CCR units, the uppermost geologic units that are expected to influence groundwater flow and contribute to variations in naturally occurring constituent concentrations across the Site are as follows (in descending order):

- Little Colorado River, Tanner Wash, and other wash Alluviums: These quaternary surface alluviums overlie bedrock formations in localized areas at Cholla and surrounding CCR units. The alluviums are unconsolidated, heterogeneous, and consist of clay, silt, sand, and gravel. In general, the Tanner Wash Alluvium (near the BAP) and other wash Alluvium (mostly under the FAP) are finer grained than the Little Colorado River Alluvium. The alluviums range in thickness from non-existent to approximately 200 ft, and in general are thickest underneath the plant and Cholla Reservoir. Around the CCR units, the alluviums range from approximately 50 ft thick in the vicinity of the FAP Dam to 100 ft thick in the vicinity of the southern BAP Dam.
- Moenkopi Formation: The Moenkopi Formation is the uppermost geologic unit beneath the plant and CCR units and is present at land surface in areas where the alluvium is non-existent. The thickness of the Moenkopi Formation near the plant ranges from non-existent to over 300 ft. Where it is sufficiently thick, the Moenkopi Formation acts as an aquitard between the shallow alluvial aquifer and the underlying Coconino Sandstone Aquifer. The Moenkopi Formation consists of three members, described below:
  - Holbrook Member: this is a relatively permeable, well-consolidated sandstone. The Holbrook Member is the uppermost member of the Moenkopi Formation and is not known to be present in the subsurface in the vicinity of the plant.
  - Moqui Member: this is the primary confining unit within the Moenkopi Formation and consists of maroon and greenish mudstone with abundant gypsum. The Moqui Member is up to approximately 250 to 300 ft thick near the plant.

- Wupatki Member: this is the lowest member of the Moenkopi Formation and is approximately 30 to 50 ft thick. The Wupatki Formation is comprised of relatively permeable sandstone and is in hydraulic connection with the underlying Coconino Sandstone.

- Coconino Sandstone: The Permian-age Coconino Sandstone is the principal lithologic unit of the C-aquifer, a regionally important aquifer for water supply. It is composed of very fine- to fine-grained sandstone with variable permeability depending on the degree of fracturing and cementation. The unit is approximately 375 to 400 ft thick in the vicinity of the plant.
- Schnebly Hill Formation: The Schnebly Hill Formation is a very fine-grained, reddish sandstone that is about 300 to 350 ft thick near the plant. It is part of the C-aquifer, but its hydraulic conductivity is about 10 to 28 percent that of the Coconino Sandstone.
- Supai Formation: The Pennsylvanian to Lower Permian Supai Formation underlies the Coconino Sandstone. It has minimal impact on the surface operations of Cholla, other than containing an approximately 600-ft thick deposit of halite and anhydrite in the Cholla well field area that impacts groundwater quality both regionally and in the vicinity of the plant.

Applicable Hydrostratigraphy. Two hydrostratigraphic units are conceptualized beneath the plant and associated CCR units. These units form the basis for the hydrogeologic Conceptual Site Model (CSM) developed by Montgomery & Associates (2011) and (2017) for the purpose of evaluating compliance wells for the CCR Groundwater Monitoring System.

The first hydrogeologic unit, the Alluvial Aquifer (consisting of the Little Colorado River, Tanner Wash, and other wash Alluviums), is present beneath the plant area, Cholla Reservoir, and the Tanner Wash and Little Colorado River drainage channels adjacent to the BAP and FAP, respectively. The alluvial aquifer in this area receives recharge from the Little Colorado River, Tanner Wash, other contributing drainage channels and any leakage through anthropogenic features such as the reservoir and the nearby Joseph City Canal. The alluvial aquifer is not used as a drinking water supply but does support a riparian habitat along natural surface water channels. Depth to water in the alluvial aquifer ranges from several ft to several tens of ft below land surface in the Cholla area, varying spatially based on proximity to recharge sources and topography, and seasonally based on rainfall-runoff patterns. Where present, groundwater flows generally in the downstream direction of the drainages under which it is present, that is, east to west in the Little Colorado River alluvium and north to south in the Tanner Wash alluvium. Groundwater flow in the Little Colorado River alluvium is also influenced by deeper paleochannels that may not coincide with the present river channel.

The second hydrogeologic unit is the C-aquifer, which consists of the Coconino Sandstone and Schnebly Hill Formation in the vicinity of the plant. Groundwater in this aquifer is under confined conditions in areas north of the Little Colorado River where the Moqui member of the Moenkopi Formation (Moqui) acts as a confining bed. Groundwater movement in the C-aquifer is generally to the north. However, the Cholla well field (southwest of the plant) has created a cone of depression that has made the localized groundwater flow in a westerly direction in that area. Near the FAP, the inferred flow of groundwater in the C-aquifer is to the west or northwest, possibly due to the broad, northwest-trending anticline that extends from the vicinity of the FAP to near Joseph City.

The alluvial aquifer and the C-aquifer are separated by the Moenkopi Formation, a regional aquitard that creates a barrier in some areas between the two aquifers in the vicinity of Cholla where the unit is sufficiently thick. In areas where the C-aquifer in the Coconino Sandstone is confined (primarily north of the Little Colorado River), the Wupatki member of the Moenkopi (Wupatki) has been observed to be water-bearing. However, the Moqui, which ranges in thickness from non-existent to 300 ft underneath and generally south of the plant and Cholla Reservoir, prevents hydraulic connection between the alluvial aquifer and the C-aquifer (where it is present) and is effectively bedrock when considering water quality conditions and groundwater movement in a significant portion of the alluvial aquifer. Recent investigations indicate localized saturation occurs in the uppermost layer of the Moqui downgradient of the BAP and FAP, principally at the base of historical drainage channels where the unit is weathered or where penetrations from monitoring well installation activities have fractured the mudstone of the Moqui and allowed overlying alluvial groundwater to infiltrate into the unit.

Uppermost Aquifer by CCR Unit. The CCR Rule requires that the uppermost aquifer underlying each CCR unit be monitored to evaluate potential impacts from the unit. At Cholla, the uppermost aquifer by unit is as follows:

- FAP (other wash and Little Colorado River Alluvium): The FAP is constructed primarily on the relatively impermeable Moqui member of the Moenkopi Formation; however, a relatively thin layer of alluvial sediments underlie the FAP (particularly in the vicinity of the dam) and is in communication with alluvium downgradient of the FAP. The FAP dam has a clay core that extends through the alluvium to Moqui bedrock where the alluvium was less than 20 ft thick at the time of dam construction. In the middle of the dam where the alluvium was greater than 20 ft thick, a cutoff wall was constructed that generally extended approximately one to two feet into bedrock. Groundwater at the toe of the FAP dam flows west-southwest primarily through shallow alluvial sediments (which are fairly fine grained) and then merges with the Little Colorado River Alluvium where the predominant direction of groundwater flow is to the west. Localized saturation also occurs in the weathered, uppermost portion of the Moqui near the FAP dam and downgradient of the FAP, near the Hunt seep.
- BAP (Tanner Wash Alluvium): The BAP is located in the Tanner Wash drainage area. The northern and western abutments of the BAP dam are constructed on the Moenkopi Formation, whereas the length of the southern portion of the dam is constructed predominantly on alluvial material. The BAP dams have a clay core that extend through the alluvium to bedrock where the alluvium was less than 20 ft thick at the time of dam construction. In regions where the alluvium was greater than 20 ft thick, a cutoff wall was constructed that generally extended to bedrock. However, due to the depths involved, the cutoff wall does not extend to bedrock in the middle of the channel underlying the southern dam. There is an approximately 10 to 20-ft thick layer of alluvium below the base of the cutoff wall in this region (at an elevation of 4,980 ft amsl). Groundwater near the BAP flows south-southwest primarily through the Tanner Wash Alluvium to its confluence with the Little Colorado River Alluvium. Near the southern BAP dam, groundwater flows within the weathered, uppermost portion of the Moqui.
- BAM (Coconino Sandstone): The BAM is a CCR landfill constructed in the Tanner Wash watershed. It is constructed on the Moqui member of the Moenkopi Formation where no saturated alluvium is present; water levels from nearby wells indicate that the Moenkopi is unsaturated beneath the BAM. Therefore, the uppermost hydrogeologic unit at the BAM is the Coconino Sandstone Aquifer which exists under confined conditions more than 300 ft below ground surface (bgs) in the vicinity of the BAM. Groundwater in the Coconino Aquifer beneath the BAM flows to the north-northwest.
- SEDI (Little Colorado River Alluvium): The SEDI is constructed on the Little Colorado River Alluvium. Groundwater near the SEDI flows parallel to the direction of Little Colorado River surface flows, approximately to the southwest.

1.2 CCR Groundwater Monitoring System

Multiple monitoring well systems are in place at Cholla to monitor groundwater conditions beneath the four Site CCR units and support ongoing assessment of impacts from potential leakage. Table 1-2 identifies each well with associated CCR unit information, the date of well installation, and well construction details. Figure 1-2 presents a map of the well locations.

Installation of these networks is summarized in the *Cholla Power Plant Coal Combustion Residuals Program – Design, Installation, and Evaluation of Completeness of Groundwater Monitoring Networks* (CCR Groundwater Monitoring System Certification Report) and is identified as compliant with 40 CFR §257.91(a) through (g) (Montgomery & Associates, 2017). Per the CCR Rule, site monitoring systems are required to evaluate groundwater quality that is representative of background (i.e., groundwater that has not been affected by leakage from a CCR unit) and groundwater passing the downgradient boundary of each CCR unit in the uppermost water-bearing hydrostratigraphic unit underlying the CCR unit.

1.2.1 Monitoring System Description

Background Groundwater Monitoring Wells. Background groundwater quality at the Site can be established by a single monitoring well or a group of monitoring wells. If a group of monitoring wells is used, these wells should be screened within the same lithologic unit, exhibit similar groundwater chemistry, illustrate similar statistical merits, and be supported by the CSM. The grouping and adequacy of background wells identified for Cholla to assess background water quality are assumed acceptable until proven otherwise.

Per the CCR Groundwater Monitoring System Certification Report, the following monitoring wells are designated as "background monitoring wells" for the respective geologic and hydrostratigraphic conditions underlying Cholla (Montgomery & Associates, 2017):

- Background Wells for the FAP and the BAP (Little Colorado River, Tanner Wash, and other wash Alluvium): The upgradient boundary of the FAP rests on a thick section of the Moenkopi Formation; there is no saturated alluvium present in the area upgradient from the FAP boundary. Therefore, background well M-64A was installed west of the plant in the Little Colorado River floodplain to serve as a background well for the FAP. The BAP, in the Tanner Wash alluvium, discharges to and is hydraulically connected to the Little Colorado River alluvium. Because hydrogeologic conditions at the BAP prevented installation of an upgradient background well (as they did at the FAP), M-64A also serves as the background well for the BAP. Travel time calculations performed for the CCR Groundwater Monitoring System Certification Report (Montgomery & Associates, 2017) indicated that M-64A is located far enough downgradient from the FAP and the BAP to represent unimpacted groundwater; however, it is notable that selection of this background well location is not ideal and has the potential to promote spatial heterogeneity issues in statistical data analysis.
- Background Wells for the SEDI (Little Colorado River Alluvium): The groundwater flow direction in the vicinity of the SEDI is to the west-southwest. Background well M-62A is installed in the alluvium on the east (upgradient) side of the SEDI.
- Background Wells for the BAM (Coconino Sandstone): The groundwater flow direction in the Coconino Sandstone Aquifer in the vicinity of the BAM is to the north-northwest. Background well M-54 is installed in the Coconino Sandstone on the southeast (upgradient) side of the BAM.

Due to the natural heterogeneity of the geologic and hydrogeologic conditions underlying Cholla, background constituent concentrations are expected to be spatially heterogeneous (varying) across the Site. The Site is also expected to exhibit both spatial and temporal heterogeneity attributable to local climatic regimes, potential leakage from Cholla Reservoir, and potential operational activity at the Site. The groundwater monitoring well networks, respective to sampling coverage and frequency, appear to adequately represent this spatial and temporal heterogeneity, pending further review.

Downgradient CCR Monitoring Wells. A total of 17 CCR compliance wells are in place at the Site to monitor the downgradient groundwater conditions of each CCR unit (Table 1-2). Fourteen of these monitoring wells are installed in either the Little Colorado River or Tanner Wash Alluvium. Two of these monitoring wells, W-123 and M-52A, were initially identified as alluvial monitoring wells but designations were updated to be partially completed in the Moqui based on site investigations conducted in 2019 and 2020. As discussed below and in Sections 1.2.2 and 4.3.1, W-123 was abandoned and replaced with W-123R in May 2021 with as shallow a screened section as possible to predominantly intercept groundwater in the alluvium, but still partially intercepts the uppermost highly-weathered and saturated Moqui. W-123 well abandonment and replacement activities are documented in Appendix A. The three remaining downgradient wells are completed in the Coconino Sandstone. The grouping of monitoring wells, spatial density, and coverage of the monitoring well network are assumed representative and acceptable until proven otherwise (Figure 1-2). These wells are grouped by their respective CCR unit, as described below:

- FAP Downgradient Wells (Alluvium and Moenkopi Moqui): The groundwater flow direction in the alluvium downgradient of the FAP dam (i.e., the waste boundary) is west-southwest. The alluvial thickness in this area is limited; in some places it may be up to 50 ft thick but in others it is non-existent. On this basis, three downgradient wells were initially designated for the FAP boundary, W-123, M-50A and M-51A. A cone penetrometer test investigation conducted downgradient of the FAP dam during 2020 suggests that the now-abandoned W-123 was substantially completed in the Moqui (Wood, 2021a). While drilling replacement well W-123R in May 2021, a highly weathered and saturated Moqui layer was encountered from 14.5 ft bgs to 15.5 ft at the top of the unit. To ensure that W-123R intercepts the alluvial aquifer and the saturated Moqui and that it complies with Arizona Department of Water Resources (ADWR) surface completion requirements, the well was constructed with a screened interval of 8 ft bgs to 18 ft bgs. Abandonment and replacement of W-123 is further discussed in Section 1.2.2. In 2018, three additional wells were installed to evaluate groundwater conditions downgradient of the FAP. These wells are identified as MW-65A, MW-66A, and MW-67A. All other compliance wells downgradient of the FAP are screened within the Little Colorado River Alluvium.
- SEDI Downgradient Wells (Little Colorado River Alluvium): The groundwater flow direction in the alluvium underlying the SEDI is to the west-southwest. Three downgradient wells were designated for the SEDI: M-56A, M-57A, and M-58A; these are screened within the Little Colorado River Alluvium.
- BAP Downgradient Wells (Tanner Wash Alluvium and Moenkopi Moqui): The groundwater flow direction in the alluvium underlying the BAP is generally to the southwest along Tanner Wash; however, there is a radial component of groundwater flow toward the east-southeast due to hydraulic head from the BAP. As of the end of the reporting period, thirteen downgradient monitoring wells are designated for the BAP: M-52A, M-53A, W-305, W-306, W-314, MW-71A, MW-72M, MW-73A, MW-74M, MW-76A, MW-77A, MW-78A, and MW-79A. M-53A, W-305, W-306, and W-314 are identified as screened in the Tanner Wash Alluvium based on well log information, but a drilling investigation conducted in 2019 indicated that M-52A is partially completed in the weathered upper portion of the Moqui (Wood, 2020a). MW-71A, MW-72M, MW-73A, MW-74M, MW-76A, MW-77A, MW-78A, and MW-79A were installed during 2021 (Section 1.2.2). Based on well log information, well identifications ending with A designations are screened in the Tanner Wash Alluvium and those ending with M designations are screened in the saturated upper layer of the Moqui.
- BAM Downgradient Wells (Coconino Sandstone): The uppermost hydrogeologic unit underlying the BAM is the C-aquifer in the Coconino Sandstone, which flows towards the north-northwest in this vicinity. Three downgradient monitoring wells were installed to monitor the quality of groundwater

passing the waste boundary of the BAM. These wells are named M-59, M-60, and M-61, and are completed in the Coconino Sandstone.

Supplementary Site Monitoring Wells. There are many groundwater monitoring wells at the Site that are not part of the CCR groundwater monitoring system but may provide useful information to the program, particularly in the region downgradient of the FAP and BAP. Table 1-2 and Figure 1-2 identify these wells.

1.2.2 Implemented Changes to Monitoring System

During the reporting period several new and replacement monitoring wells were installed at the SEDI, FAP and BAP. All new wells are included in Table 1-2 and shown on Figure 1-2. The new wells are summarized by unit as follows;

- At the SEDI, downgradient supplementary monitoring well CR-1 was abandoned and replaced with CR-1R. The basis for abandonment and replacement, documentation of all associated activities, and any recommendations are included in the *Well Completion Report Abandonment and Replacement Program* included as Appendix A.
- At the FAP, downgradient monitoring wells W-123, W-126 and piezometers F-91, F-92, F-111 were abandoned and replaced with W-123R, W-126R, F-91R, F-92R, and F-111R respectively. Extraction wells GSX-1 and GSX-2 located at the southern toe of the FAP were also abandoned and replaced with one new extraction well, GSX-1R. W-123R and GSX-1R are discussed further in Section 4.3.1. Appendix A further details justification for well replacement and all associated well completion activities of the new FAP wells.
- At the BAP, supplementary monitoring well W-307 was abandoned and replaced with W-307R (Appendix A). Additionally, eight new downgradient monitoring wells (MW-71A, MW-72M, MW-73A, MW-74M, MW-76A, MW-77A, MW-78A, and MW-79A) were installed to further define groundwater conditions at the BAP. Although not identified as monitoring wells, five extraction wells were also installed at the southern toe of the BAP (BSX-01, BSX-02, BSX-03) and downgradient of the TWX Area System (BSX-04 and BSX-05) to provide additional groundwater quality information and support pre-design activities in the vicinity. All new and replacement BAP wells are discussed further in Section 4.3.1.

2.0 Summary Of Key Actions Completed

A summary of key actions conducted at the Site in 2021 to address CCR Rule requirements is as follows:

- *Documentation of Groundwater Monitoring Activities Conducted in 2020* - 40 CFR §257.90(e) requires that an Annual Groundwater Monitoring and Corrective Action Report for applicable sites be prepared for existing CCR units annually on January 31 of the following year. During the reporting period, the *Annual Groundwater Monitoring and Corrective Action Report for 2020* was prepared (Wood, 2021a), placed in the facility's operating record, and posted to APS's CCR information webpage in accordance with 40 CFR §257.105(h)(1) and 40 CFR §257.106(h)(1).
- *Continuation of the Detection Monitoring Program at the BAM* – 40 CFR §257.94(b) requires the continuation of detection monitoring at a semiannual frequency for Appendix III constituents at CCR units where statistical analysis of Appendix III constituent data do not indicate a statistically significant increase (SSI) over background. Section 3.2 summarizes detection monitoring activities conducted during the reporting period.
- *Statistical Analyses of Appendix III Constituents at the BAM* – For CCR units in the detection monitoring program, 40 CFR §257.93(h) requires the evaluation of groundwater monitoring data for SSIs over

background of Appendix III constituents no later than 90 days after completing the associated sampling and analysis. During the reporting period, two statistical analyses were performed using updated analytical data for Appendix III constituents at BAM monitoring wells. The statistical analyses are summarized in Section 3.3.1.

- *Continuation of the Assessment Monitoring Program at the SEDI* - 40 CFR §257.95(b) and (d)(1) require the continuation of assessment monitoring annually for Appendix IV constituents and semiannually for Appendix III and detected Appendix IV constituents at CCR units where statistical analysis of Appendix III constituents indicate an SSI over background. Section 3.2 summarizes assessment monitoring activities conducted during the reporting period.
- *Statistical Analyses of Appendix IV Constituents at the SEDI* – For CCR units in the assessment monitoring program, 40 CFR §257.93(h) requires the statistical evaluation of groundwater monitoring data for exceedances of Appendix IV constituents no later than 90 days after completing the associated sampling and analysis. During the reporting period, two statistical analyses were performed using updated Appendix IV constituent data collected from SEDI monitoring wells. The statistical analyses are summarized in Section 3.3.2.
- *Characterization of the Nature and Extent of Releases from the FAP and the BAP* – 40 CFR §257.95(g)(1) requires characterization of the nature and extent of releases from CCR units where one or more Appendix IV constituents exceed GWPSs at statistically significant levels (SSLs). Section 4.2 summarizes characterization activities performed during the reporting period to address this requirement.
- *Pre-Design Studies Necessary for Remedy Selection* – During the reporting period, several pre-design studies necessary to support the selection and design of remedies for the FAP and the BAP were performed. The pre-design studies are summarized in Section 4.3.1.
- *Preparation of a Semiannual Progress Report on Remedy Selection for the FAP and the BAP* – 40 CFR §257.97(a) requires the preparation of semiannual reports which document the progress of remedy selection for CCR units that have impacted groundwater. During July of the 2021 reporting period, the fifth semiannual report to fulfill this requirement was prepared (Section 4.5).
- *Completion of SEDI Closure* – During the reporting period, APS conducted activities supporting closure of the SEDI including decontamination, demolition, and removal of concrete structures within the unit, excavation of residual CCR from the SEDI footprint, and backfilling/compacting of the excavation with clean soil. SEDI closure activities are further discussed in Section 4.6.1.

3.0 Groundwater Monitoring Program

The groundwater monitoring and corrective action process defined in the CCR Rule includes a phased approach to groundwater monitoring, leading (if applicable) to the establishment of groundwater protection standards (GWPSs) for each CCR unit. Exceedances of the GWPSs that are determined to be statistically significant can trigger requirements for additional groundwater characterization and corrective action assessment followed by implementation.

The first phase of groundwater monitoring is the detection monitoring phase. This phase focuses on a set of constituents (listed in Appendix III of the CCR Rule) that are the more mobile constituents associated with CCR and therefore represent indicators of possible impacts from CCR in groundwater. If SSIs over Appendix III constituent background threshold values (BTVs) are detected in the downgradient boundary wells and cannot be demonstrated to be associated with a source other than the CCR unit, then groundwater monitoring moves into the second phase, assessment monitoring. Table 3-1 summarizes the Appendix III constituent BTVs established for Site CCR units.

The second phase of groundwater monitoring focuses on the constituents listed in Appendix IV of the CCR Rule. The Appendix IV constituents generally are less mobile and occur at lower concentrations in groundwater than the Appendix III constituents. Concentrations of Appendix IV constituents in downgradient wells are compared to GWPSs. The GWPSs, established for Appendix IV constituents only, are the higher of either the federal Safe Drinking Water Act Maximum Contaminant Level (MCL), alternative risk-based GWPSs established in the CCR Rule, or the background concentration for each constituent. Table 3-1 summarizes the Appendix IV constituent GWPSs established for Site CCR units.

If exceedances of the GWPSs are determined to occur in downgradient boundary wells at SSLs and no alternative sources for the exceedances can be demonstrated, then both additional groundwater characterization and assessment of corrective actions are initiated. Following assessment of corrective measures, a remedy (or set of remedial activities) is selected and implemented as the groundwater corrective action program for the CCR unit. According to the CCR Rule, groundwater corrective action will continue until compliance with the GWPSs has been attained in all impacted wells and sustained for a period of three consecutive years.

3.1 Program Status

Based on Appendix III and Appendix IV concentrations and statistical analyses completed as of the end of the 2021 reporting period for the BAM and SEDI, these units are currently in the detection and assessment groundwater monitoring programs respectively. The FAP and BAP are in corrective action and continue to be monitored as part of the assessment groundwater monitoring program.

Summaries of groundwater monitoring program activities performed during the reporting period are presented in the following sections.

3.1.1 Problems Encountered and Resolutions to Problems

Problems encountered during the reporting period and associated resolutions include:

- Possible Monitoring Equipment Malfunction – During the October 2021 semiannual groundwater monitoring event, the Site-owned YSI Pro Plus Multiparameter Instrument was unable to be powered on. After unsuccessful trouble shooting of the Site-owned YSI, a rental YSI Multiparameter Instrument was used as a replacement but the dissolved oxygen (DO) probe appeared to be malfunctioning and presenting inaccurate DO measurements despite regular calibration. DO measurements were still carefully considered in establishing stabilized flow for sampling but not used to evaluate water quality. APS has sent the out of order Site-owned YSI Pro Plus meter to the manufacturer for repairs to ensure accurate field parameter readings during future groundwater sampling.
- Total Dissolved Solids Analytical Method Holding Time Exceedance – During the October 2021 semiannual groundwater monitoring event, samples collected from BAM monitoring wells M-54, M-59, M-60, and M-61 exceeded the seven-day holding time for laboratory analysis of total dissolved solids (TDS). All laboratory results for these samples were validated, qualified as estimated (J qualifier, as shown in Appendix C), and assessed to be acceptable for use in data evaluation. However, as a further precaution, TDS was re-sampled from M-54, M-59, M-60, and M-61 due to it being one of the Appendix III constituents used to determine whether the BAM continues to be within detection monitoring. Results of the BAM TDS re-sampling event are similar to the initial October TDS sample results. Analytical laboratory reports, the *2021 Data Validation Report*, and groundwater quality data results are included in Appendix B, C and D, respectively. To ensure timely sample delivery to laboratories for analysis and avoid holding time issues in the future, APS has coordinated an expedited delivery service directly from the Site to laboratory locations.

- As noted in the *2021 Data Validation Report* (Appendix C) and Section 3.2.4 below, a considerable amount of the groundwater sampling data assessed during the reporting period required qualifiers. The data were validated; however, it has been recommended to evaluate other laboratories and consider a laboratory transition plan in 2022 (Section 5.0).

3.1.2 Groundwater Monitoring Program Transitions

No CCR unit monitoring program transitions occurred during the reporting period.

3.1.3 Alternative Source Demonstrations

In 2019 an alternative source demonstration (ASD) was conducted in response to exceedance of the lithium GWPS at the BAP (Wood, 2020a). The findings of the ASD suggest that lithium concentrations vary due to spatial heterogeneity in groundwater conditions beneath and around the BAP; therefore, interwell statistical comparisons to establish a GWPS are inadequate. During the reporting period an Exploratory Data Analysis (EDA) to support calculating preliminary intrawell GWPS values for compliance wells M-52A, M-53A, M-55A, W-305, W-306, and W-314 was completed. Appendix E presents the Technical Memorandum for this statistical analysis.

No ASDs or further updates to existing ASDs were performed during the reporting period.

3.2 Monitoring Data Collected

Two CCR groundwater monitoring events were conducted at Cholla during the reporting period in accordance with the Sampling and Analysis Plan (SAP) developed for the Site (Montgomery & Associates, 2015). The groundwater monitoring events took place during April and October 2021. The SAP documents the methods and procedures used to conduct groundwater sampling, analyze collected samples for CCR constituents, and assess associated analytical data for quality assurance purposes. It has also been recommended that the SAP be updated during the 2022 reporting period (Section 5.0). The following sections summarize results of the monitoring activities conducted in 2021. Table 3-2 identifies when monitoring occurred and which units were monitored. During the reporting period, detection monitoring included evaluation of collected samples for Appendix III constituents on a semiannual basis (40 CFR §257.94[b]). At a minimum, assessment monitoring included evaluation of collected samples for all Appendix IV constituents on an annual basis (40 CFR §257.95[b]) and detected Appendix IV constituents and all Appendix III constituents on a semiannual basis (40 CFR §257.95[d][1]).

Supplementary water samples were also collected as part of pre-design studies and new well installation performed during the reporting period which include:

- Groundwater samples collected during development of new and replacement wells at the SEDI, BAP and FAP as part of development criteria (Section 1.2.2 and 4.3.1);
- Groundwater samples collected at new and replacement wells at the BAP, FAP, and SEDI to help establish a baseline for water quality (Section 1.2.2 and 4.3.1);
- Groundwater samples collected during aquifer tests at new supplementary BAP and FAP wells (Section 4.3.1);
- Surface water samples collected from the BAP and FAP units.

The additional samples were collected and analyzed using industry-standard procedures and in accordance with the SAP.

3.2.1 Water Level Monitoring

Figures 3-1 and 3-2 present potentiometric surface maps created using water-level measurements collected just prior to the April and October 2021 groundwater monitoring events. Groundwater elevations collected from monitoring wells at each CCR unit are evaluated and plotted independently based on the CSM. The estimated flow directions inferred from the groundwater elevation data are depicted on the figures. As indicated, groundwater in the alluvium appears to flow south to southwest from the FAP and the drainage area associated with Tanner Wash (where the BAP is located), towards the Little Colorado River, where groundwater generally flows to the west (consistent with surface water flows). Groundwater in the C-aquifer underlying the BAM flows to the north.

Appendix F presents hydrographs of groundwater elevations measured at CCR compliance wells over time. The groundwater elevations measured during the reporting period are relatively stable and consistent with historical observations. In general, seasonal fluctuations are apparent from the water-level data, with higher water levels occurring in the spring (e.g., March through May) and lower water levels occurring in late-summer through fall (e.g., August through October).

Notable observations for groundwater conditions at each CCR unit are discussed below.

- FAP: There is a fairly steep hydraulic gradient at the edges of the FAP dam where no cutoff wall is present. Farther downgradient, groundwater elevations in M-46A, MW-67A, and MW-63A indicate that the hydraulic gradient begins to flatten with increased distance from the FAP. Well W-127 was noted to be dry in April and October 2021.
- BAP: Groundwater elevations at M-53A (located at the western abutment of the southern BAP dam) and W-314 (located downgradient of the eastern side of the BAP dam) are approximately 10 ft higher than groundwater elevations in wells located towards the central portion of the southern BAP dam (i.e. M-52A, W-305, and W-306), indicating a steep hydraulic gradient near the edge of the BAP. A decreasing trend in water levels is occurring at W-314 relative to the other BAP wells. New well MW-76A was dry upon drilling and installation in May 2021 and still noted to be dry during October 2021.
- BAM: Groundwater elevations in the C-aquifer monitoring wells continue to indicate a slightly increasing trend over time.
- SEDI: The hydraulic gradient beneath the SEDI is relatively flat in comparison to the FAP and the BAP, and a slightly increasing trend in groundwater elevations is apparent from the water-level data.

3.2.2 Groundwater Flow Rate Estimation

The CCR Rule requires that groundwater flow rates beneath CCR units be estimated during each monitoring event. The water levels measured in April and October 2021 (Figures 3-1 and 3-2) were used to calculate the direction and magnitude of the hydraulic gradient in the vicinity of each unit using a spreadsheet tool available on the United States Environmental Protection Agency (USEPA) website (USEPA, 2014). Darcy's Equation for flow through porous media was then used with Site data (where available) and/or literature-based hydraulic conductivity and effective porosity values for hydrogeologic units to estimate average linear groundwater flow velocities. Table 3-3 identifies the wells, hydraulic conductivities, and porosities used in the analysis and presents the calculated groundwater flow directions, gradients, and flow velocities.

For the Tanner Wash Alluvium downgradient of the BAP, the hydraulic gradient was stable during the reporting period at 0.015 ft per ft. The direction of groundwater flow from the BAP was south (185 degrees from north), and the corresponding groundwater flow rate for both monitoring events was 0.11 ft per day. The hydraulic conductivity value used in groundwater flow calculations will be reassessed and updated as applicable in 2022 based on further aquifer testing conducted at the BAP.

For the alluvial aquifer downgradient of the FAP, the hydraulic gradient and flow direction were also relatively stable. The hydraulic gradient ranged from 0.020 to 0.021 ft per ft and the direction of groundwater flow was to the southwest towards the Little Colorado River (236 to 241 degrees from north). The corresponding groundwater flow rates for April and October 2021 were 0.65 and 0.61 ft per day, respectively. The hydraulic conductivity value of 3.98 ft per day for the FAP, which was used in the groundwater flow rate calculations, is averaged from the previously utilized FAP hydraulic conductivity (Wood, 2021a Table 3-1) and analyses of aquifer testing conducted at the toe of the FAP up to January 2021 (Appendix G and Wood, 2021a). It should be recognized that this is an averaged hydraulic conductivity value for a spatially heterogeneous aquifer. The average hydraulic conductivity is heavily weighted by the results of the aquifer testing analyses done near the toe of the FAP only and is greater than the previously utilized hydraulic conductivity. Hydraulic conductivity will continue to be reassessed and updated as applicable in 2022 based on further aquifer testing conducted at the FAP.

For the Little Colorado River Alluvium downgradient of the SEDI, the hydraulic gradient was relatively stable. The flow direction, while also relatively stable - varied the most of all the units. The magnitude of the hydraulic gradient ranged from 0.0007 to 0.0008 ft per ft during the reporting period, and the direction of groundwater flow was generally west to southwest towards the Little Colorado River (254 to 261 degrees from north). The corresponding groundwater flow rates were 0.38 to 0.41 ft per day for April and October 2021, respectively.

For the C-Aquifer underlying the BAM, the hydraulic gradient and flow direction were fairly stable during the reporting period. The magnitude of the hydraulic gradient ranged from 0.0085 to 0.0088 ft per ft and the direction of groundwater flow for April and October 2021 was to the north (358 to 359 degrees from north). The corresponding groundwater flow rate for April and October 2021 was 1.8 ft per day.

3.2.3 Sample Collection

Groundwater samples were collected, labeled, preserved, and shipped per the SAP (Montgomery & Associates, 2015). In accordance with 40 CFR §257.93(i), groundwater samples collected for statistical analysis of Appendix III and IV constituents were not field filtered prior to analysis. Pursuant to the SAP, quality control samples (i.e., field duplicates, field blanks and extra sample volume for matrix spike samples) were collected during each groundwater monitoring event. These samples are noted on associated chain-of-custody documentation.

3.2.4 Sample Analysis and Data Validation

Groundwater samples were submitted to Eurofins TestAmerica Laboratories, Inc. (TestAmerica) and Radiation Safety Engineering, Inc. (Radiation Safety) located in Phoenix, Arizona for analysis. TestAmerica evaluated samples for all constituents other than radium, while Radiation Safety performed radium analyses. Both TestAmerica and Radiation Safety are Arizona Department of Health Services-licensed laboratories (AZ0728 and AZ0462, respectively). Appendix B presents the associated Laboratory Reports of Analysis organized by CCR unit.

Table 3-2 identifies the analytes evaluated during each monitoring event and field investigation. Analytes varied based on the monitoring program (i.e., detection vs. assessment monitoring) or field investigation. The SAP identifies Appendix III and Appendix IV constituents with associated analytical methods.

Following receipt of final laboratory reports of analysis, the reports and associated sample data collected during detection and assessment monitoring were evaluated for quality assurance purposes. The scope of the review was a USEPA Stage 2A validation. Appendix C presents the *2021 Data Validation Report* which documents these reviews. There were no notable data validation qualifiers or reason codes added to the 2021 data. There was, however, a considerable increase in the number of data validation qualifiers (particularly 'J' qualifiers) added to results from TestAmerica. There was an increase in the number of groundwater samples collected in 2021, but the increase in the number of data validation qualifiers was not proportional. All data qualifiers and reason codes are included in the *2021 Data Validation Report* (Appendix C).

3.2.5 Sample Results

Appendix D presents the groundwater sampling results for 2021 along with historical groundwater quality data for the Site. The groundwater quality data collected during the reporting period are discussed further in Section 4.2. The sampling coverage and frequency of the groundwater monitoring system is assumed representative and adequate of spatial and temporal heterogeneity until proven otherwise.

3.3 Statistical Analysis of Monitoring Data

Statistical analyses of Appendix III and Appendix IV constituent data were conducted during the reporting period to evaluate whether collected monitoring data indicate Site CCR units have adversely impacted underlying groundwater. These analyses were conducted pursuant to the Statistical Data Analysis Work Plan (SDAWP) developed for the Site (Wood, 2018).

3.3.1 Evaluation of Appendix III Constituent Data

The BAM was the only Site CCR unit that remained in the detection monitoring program as of the end of 2019 and required statistical evaluations of Appendix III constituent data during the reporting period.

A statistical analysis of Appendix III constituent data collected at the BAM through October 2020 was completed in April 2021 (Appendix H). The statistical analysis indicated no SSIs over Appendix III constituent BTVs. An initial exceedance identified in May 2020 for fluoride at CCR wells M-60 and M-61 was declared statistically insignificant based on a 1 of 3 resampling strategy implemented during the October 2020 sampling event. The analysis incorporates updated BTVs, which are presented in Table 3-1.

A statistical analysis of Appendix III constituent data collected at the BAM through July 2021 was completed in October 2021 (Appendix I). In accordance with the SDAWP, APS implemented a 1 of 2 resample strategy to resample CCR well M-60 to address an initial April 2021 exceedance over the TDS BTV. The statistical evaluation determined that the April 2021 M-60 TDS exceedance was statistically insignificant. The analysis also incorporates updated BTVs, which are presented in Table 3-1. As of the end of this reporting period APS continues detection monitoring at the BAM in accordance with 40 CFR §257.95(f).

3.3.2 Evaluation of Appendix IV Constituent Data

The SEDI was the only Site CCR unit that remained in the assessment monitoring program without declared exceedances of GWPSs as of the end of 2019 and required statistical evaluations of collected Appendix IV constituent data during the reporting period.

Two statistical analyses of Appendix IV constituent data collected from SEDI wells through October 2020 and April 2021 (Appendices J and K, respectively) were performed in 2021. Both analyses indicated that no GWPSs were exceeded at SSLs. The analyses also incorporated updated BTVs, which are presented in Table 3-1. On the basis that one or more Appendix III constituents continued to exceed BTVs and the statistical assessment indicated that Appendix IV constituent concentrations did not exceed applicable GWPSs at SSLs, as of the end of this reporting period APS continues assessment monitoring at the SEDI in accordance with 40 CFR §257.95(f).

Although groundwater at the BAP is currently being assessed as part of the corrective action program, to address consistent GWPS exceedances of selenium noted at supplementary wells M-55A and W-309, an updated statistical evaluation is recommended in 2022 to identify further possible constituents of concern (COCs) (Section 5.0). This update will also address statistical assessments supporting future unit closure (Section 5.0). At the FAP, no additional constituents (Section 4.2) routinely exceed their respective GWPS.

4.0 Corrective Action Program

4.1 Program Status

Based on the declaration that one or more Appendix IV constituents are present at SSLs above GWPSs downgradient of the FAP and the BAP, these units are currently in the corrective action program. Notification of exceedances occurred on November 14, 2018 and were documented in the Annual Groundwater Monitoring and Corrective Action Report for 2018 (Wood, 2019a).

Summaries of corrective action program activities performed during the reporting period are presented in the following sections.

4.2 Characterization of Potential Releases from CCR Units

To characterize releases from CCR units, 40 CFR §257.95(g)(1) requires: (i) the installation of wells to define the extent of contaminant plumes, (ii) collection of data on the nature and estimated quantity of material released, (iii) installation of at least one well at the facility boundary in the direction of contaminant migration, and (iv) sampling of these wells to characterize the nature and extent of the release.

Initial efforts to address the requirements of 40 CFR §257.95(g)(1) were documented in the *Hydrogeologic Investigation of the Fly Ash Pond and Bottom Ash Pond* (Wood, 2020b). However, due to the duration required to adequately characterize complex groundwater impacts, work supporting characterization of potential releases from CCR units is ongoing. Activities conducted during the reporting period to address CCR Rule release characterization requirements downgradient of the FAP and BAP include:

- The collection of groundwater quality data from FAP and BAP monitoring wells (Section 3.2);
- Delineation of the nature and extent of releases from the FAP and BAP in the form of plume maps (Figures 4-1 through 4-5).

Findings from the characterization activities are summarized as follows and discussed in the following sections.

- COCs present at concentrations above respective GWPSs in groundwater downgradient of the FAP include arsenic, fluoride, lithium, and molybdenum, with the inferred extent of each constituent depicted on Figures 4-1, 4-2, 4-3, and 4-4 respectively. Fluoride, lithium, and molybdenum all exceed the respective GWPSs in groundwater beneath downgradient properties just beyond the APS property south of the FAP. Surface water samples taken in October 2021 indicate that antimony, arsenic, beryllium, cobalt, fluoride, lithium, molybdenum, selenium and total radium are present in pond water in the FAP at concentrations exceeding the GWPSs (as shown in Appendix D).
- Cobalt is present at concentrations above the GWPS in groundwater downgradient of the BAP, with the inferred extent of cobalt depicted on Figure 4-5. Cobalt is elevated above the GWPS in groundwater beneath downgradient properties. Although the plume has migrated beyond the extent of APS property directly adjacent to the BAP, it is defined by wells located on downgradient APS property. New wells MW-71A through MW-74M, MW-76A through MW-79A, and replacement well W-307R (Section 1.2.2) helped to further refine and update the inferred cobalt plume south of the BAP as shown in Figure 4-5.

Samples collected in both April and October 2021 indicate cobalt concentration in pond water of the BAP is below both the GWPS and concentrations observed in groundwater (as shown in Appendix D).

4.3 Progress on Remedy Selection for the FAP and BAP

In response to GWPS exceedances at the FAP and the BAP and pursuant to 40 CFR §257.96(a), an Assessment of Corrective Measures (ACM) was prepared in 2019 (Wood, 2019b) to evaluate the performance of several combined corrective measures to address groundwater impacts resulting from the FAP and the BAP. Since completion of the ACM, several evaluations and pre-design studies to support the selection and design of remedies for the FAP and the BAP have been conducted (Wood, 2020a and Wood, 2021a).

4.3.1 Corrective Measures Pre-Design Studies

The following are summaries of the evaluations and pre-design studies completed during the 2021 reporting period;

- *Aquifer Testing Downgradient of the FAP* – Four aquifer tests were conducted at wells EW-01 through EW-04 in January 2021. Appendix G presents the Well Completion Report that summarizes the aquifer test activities and analyses. Aquifer properties such as hydraulic conductivity and transmissivity were calculated from the aquifer test data. As noted in Section 3.2.2, the hydraulic conductivity values assessed from the aquifer testing (Appendix G) were greater than the previously utilized value at the FAP (Wood 2021a, Table 3-1). Data from the aquifer testing also suggest that EW-01 through EW-03 are hydraulically connected to one another and several other alluvial wells in the immediate area but not to EW-04 or then-existing well W-123. A response was seen in W-123 only during the EW-04 aquifer testing. In May 2021 W-123 was abandoned along with several other FAP wells, including extraction wells GSX-1 and GSX-2 (Section 1.2.2). The replacement for W-123, W-123R, was drilled approximately 10 ft southeast of its predecessor well. Likewise, the replacement well for GSX-1 and GSX-2, GSX-1R, was drilled approximately 10 ft southeast of GSX-1. In June 2021 aquifer testing was conducted at GSX-1R. As summarized in Appendix A, water level and aquifer testing data suggest that GSX-1R, EW-03, and F-111R are hydraulically connected to one another but not to EW-04 or W-123R. All aquifer testing completed in the alluvial aquifer downgradient of the FAP to date indicates that the aquifer is heterogeneous and exhibits limited connectivity between water bearing zones. As of the end of 2021, GSX-1R is not outfitted with a pump or incorporated into the Geronimo Seepage Intercept System.
- *FAP Seepage Intercept System Inspection and Improvement Design* – An inspection and basic operational testing of the existing FAP seepage intercept system was completed in June 2021. A Technical Memorandum summarizing the inspection is presented in Appendix L.
- *Groundwater Reduction/Oxidation Evaluation at the FAP* – In January 2021 the potential reduction/oxidation (redox) processes in groundwater downgradient of the FAP were evaluated (Wood, 2021b). Data collected during the 2020 reporting period indicate that reduced conditions in groundwater are causing mobilization of arsenic from aquifer sediments into groundwater near FAP well MW-67A. Per recommendation of the evaluation, analysis of redox constituents from three more rounds of groundwater samples should be completed. Redox constituents were collected during the 2021 reporting period during the April and October 2021 sample events. The data collected during 2021 at the FAP further support the previous redox evaluation. The mean concentration of iron at wells upgradient from MW-67A, except for M-46A, are all less than 1.0 milligram per liter (mg/L) for the 2020 and 2021 sampling events. In contrast, the mean concentration of dissolved iron at MW-67A in the 2020 and 2021 samples was 8.03 mg/L. Under oxidizing conditions, very low concentrations of iron are expected as ferric oxyhydroxides are

sparingly soluble at neutral pH. These data still indicate that reducing conditions are present in groundwater in the area of MW-67A, which likely results in the increase in arsenic concentrations observed at this particular well.

- *BAP Seepage System Inspection* – An inspection of the existing BAP seepage system was completed in December 2019 with an additional inspection and basic operational testing occurring in June 2021. A Technical Memorandum summarizing the inspections is presented in Appendix M. The memorandum recommends that the BAP Seepage Intercept Systems be updated and reconfigured to allow the operational assessment of each individual system and component, including adding water level monitoring capacity, elapsed time meters on pumps, and flow meters on piping.
- *Evaluation of Potential Reduction/Oxidation Conditions in Groundwater at the BAP* – In May 2021, the potential redox processes in groundwater downgradient of the BAP were evaluated based on groundwater samples taken throughout the previous 2020 reporting period. Appendix N presents the Technical Memorandum which summarizes this preliminary analysis. The data from 2020 (specifically the results for dissolved and ferrous iron) indicate the presence of reducing conditions in groundwater at wells adjacent to the BAP. As recommended in Appendix N, further evaluation of groundwater redox conditions and analysis of redox constituents from three more rounds of groundwater samples should be completed. Redox constituents were collected during the October 2021 sample event as the first of the three rounds recommended and an evaluation of the results will be incorporated into the relevant BAP pre-design study reports discussed below as applicable.
- *BAP Pre-Design Studies* – During the reporting period, several pre-design studies necessary for the selection and design of remedies for the BAP were conducted. The pre-design studies include the following;
  - *Installation of Wells Downgradient of the BAP* – In May 2021, four new monitoring wells downgradient of the BAP (MW-76A, MW-77A, MW-78A and MW-79A) were installed. The wells will help to further define the nature and extent of elevated cobalt concentrations in the area. Wells BSX-01 through BSX-05 were also installed in May 2021 along the southern dam and downgradient of the TWX Area and are constructed with the ability to convert to future extraction wells. All five BSX wells are not currently outfitted with pumps, but could potentially be included in an extraction well network as part of interim or remedial corrective measures (Section 4.4.2 and 5.0) and may also serve as supplementary monitoring wells. In September 2021, four additional downgradient monitoring wells were installed near the Petroglyph and Tanner Wash Seeps (MW-71A, MW-72M and MW-73A, MW-74M respectively). These wells were installed to further investigate the possibility that reducing conditions in the groundwater found in the Moqui member specifically may be the mechanism for the elevated cobalt observed at the BAP. A Well Completion Report documenting all field and installation activities of the 13 new BAP wells will be completed early in the following reporting period and included in the 2022 GMCAR (Section 5.0). In October 2021 supplementary monitoring well W-307 was abandoned and replaced with monitoring well W-307R. Installed in 1984, samples from W-307 may not have been representative of groundwater conditions in the area. The replacement well, W-307R was installed with a screened interval similar to that of W-307. All installation activities associated with W-307R are also documented in Appendix A.
  - *Aquifer Testing Downgradient of the BAP* – Following installation of the new monitoring and extraction wells at the BAP, in June 2021 aquifer testing was completed at four of the five extraction wells (BSX-01 through BSX-04) and MW-79A. The testing was conducted to further evaluate local aquifer properties and to evaluate the effectiveness of extraction wells

as a containment technology (Section 4.4.2 and 5.0). Select groundwater samples were collected during testing to monitor water quality changes and conditions at the wells. Aquifer test activities and analyses will be presented in the Well Completion Report that documents the new BAP well installation activities mentioned above.

- *Aqueous and Solid Matrix Sampling at the BAP* – During the drilling and development of select new wells at the BAP during the reporting period, both solid matrix sediment samples and groundwater samples were collected. All samples were collected in accordance with the SAP (Montgomery & Associates, 2015) for a suite of analytical tests and bench scale testing to evaluate the effectiveness of potential treatment technologies or monitored natural attenuation to reduce the mobility and mass of cobalt in the groundwater (Section 4.4.2 and 5.0). The samples and analytical results will also serve to better understand the geochemical processes that may be occurring at the BAP and this information will be translated to update the fate and transport phase of the groundwater model. Sampling activities, results, and geochemical evaluations will be presented in a Geochemical Evaluation Report to be completed early next reporting period and included in the 2022 GMCAR (Section 5.0).
- *Geophysical Surveying Upgradient of the BAP* – To characterize background groundwater elevations and hydraulic gradient in order to understand potential impacts BAP operations have had on the local Tanner Wash alluvium aquifer, geophysical surveys were completed in August 2021. One resistivity survey and three seismic refraction surveys were completed at two locations within Tanner Wash several miles upgradient of the BAP. Field activities and analyses of the survey data will be presented in a Geophysical Survey Report to be completed early next reporting period and included in the 2022 GMAR (Section 5.0).

Additional pre-design studies planned for 2022 are discussed in Section 5.0.

4.3.2 Public Meeting

Per 40 CFR §257.96(e), APS will conduct a public meeting with interested and affected parties to present the results of the ACM for the FAP and the BAP at least 30 days prior to selecting remedies for each CCR unit. Although pre-design studies supporting remedy selection were progressed during the reporting period, investigations considered integral to the remedy selection process were ongoing as of the end of 2021.

4.3.3 Remedy Selection Reports for the FAP and BAP

Upon completion of necessary pre-design studies and a public meeting soliciting input on corrective measures assessment, APS will select remedies for the FAP and the BAP that meet the requirements of 40 CFR §257.97(b). Pursuant to 40 CFR §257.97(a) and §257.91(f), a remedy selection report for the FAP and the BAP will be prepared and remedial activities at the FAP and the BAP will begin within 90 days of selecting a remedy for each unit.

4.4 Implementation of Risk Mitigation Plan Supporting Alternative Closure

On November 30, 2020, APS submitted a Demonstration Supporting a Site-Specific Deadline to Initiate Closure for the FAP and the BAP to the USEPA pursuant to 40 CFR §257.103(f)(2). The demonstration included a Risk Mitigation Plan (Wood, 2020c) that identified risk mitigation activities and interim response measures that were to be routinely documented in this GMCAR. The following sections provide these updates.

4.4.1 Risk Mitigation Activities

During the reporting period, weekly inspections of the FAP and BAP seepage collection systems were performed by APS personnel. At the time of these inspections, the area around the collection systems were also inspected for the presence of new seepage. Weekly inspections will continue and expansion of these inspections to include areas located around the downgradient perimeter of the FAP and BAP will occur in 2022.

Quarterly reviews of the online ADWR Wells 55 database were also completed to assess if groundwater production wells were installed in impacted aquifers downgradient of the FAP or the BAP. For the 2021 reporting period, ADWR Wells 55 database reviews occurred on January 15, March 30, August 16, and November 30. The quarterly reviews are documented in Appendix O. No new well owner coordination was required during the reporting period. Quarterly reviews of the ADWR Wells 55 database will continue in 2022.

4.4.2 Interim Response Measures

While additional pre-design studies necessary for remedy selection are being progressed, APS is implementing several response measures at the FAP and the BAP to limit groundwater impacts in the interim. The interim response measures will also help to evaluate the effectiveness of potential remedial technologies. The interim response measures implemented during the reporting period and planned for 2022 are outlined in the Risk Mitigation Plan (Wood, 2020c) and summarized below.

- *Operation of Improved Seepage Intercept Collection Systems at the FAP* – The FAP Seepage Intercept Collection System, which includes the existing Geronimo Seepage Collection System, existing Hunt Seepage Collection System, the four wells (EW-01 through EW-04) installed downgradient of the FAP in December 2020 (Appendix G) and the replacement well GSX-1R installed in May 2021 (Appendix A), were evaluated for improvements that would allow the system to more effectively capture seepage from the FAP before it discharges to groundwater. Improvements that were evaluated include: installing pump elapsed time meters; upgrading, replacing and increasing the number of flow meters on the system to better understand system flows; plumbing the new wells with piping and pumps; and upgrading electrical and instrument controls. This project is currently in the design phase and is expected to be completed and commissioned in 2022.
- *Evaluation of FAP Dewatering Strategies* – FAP water level monitoring data trends suggest that recent decreases in free water levels are largely driven by evaporation in the warmer months of the year. To expedite the containment of seepage from and closure of the FAP, APS is progressing a mechanically enhanced evaporation strategy to remove free water from the unit. Since the water in the FAP has a high TDS concentration and is continuing to concentrate constituents that are expected to impact evaporation rates, a pilot test evaluating use of an irrigation system and floating evaporator equipment will be implemented in early 2022 and expanded as warranted based on the results of the study.
- *Operation of Extraction Wells at the BAP* – The five new wells (BSX-01 through BSX-05) installed downgradient of the BAP in May 2021 may be converted into extraction wells and incorporated into an extraction well network to capture seepage from the BAP. The aquifer testing performed at four of the five wells in June 2021 (Section 4.3.1) will help to evaluate the effectiveness of additional extraction wells added to the network as part of a potential remedy.
- *Evaluation of In-Situ Remedial Technologies for the BAP* – As part of the BAP Pre-Design Studies, laboratory-scale evaluations will be conducted with solid and aqueous samples collected during the site investigation activities conducted in May through October 2021 (Section 4.3.1). The

laboratory tests will be performed to assess in-situ groundwater remedial technologies for the elevated cobalt concentrations in groundwater downgradient of the BAP. Laboratory testing of solid and aqueous samples taken during field investigations began October 2021 and will be completed in early 2022 (Section 4.3.1 and 5.0).

- *Existing Seepage Intercept Collection Systems and Mass Removal Estimates* – The existing seepage intercept collection systems at both the FAP and the BAP were maintained and operated through 2021. An estimated total mass removed of all Appendix IV constituents (minus radionuclides) was calculated for the operating systems over the past year. The estimated contaminant mass removed from the groundwater by these systems in 2021 is based on the annualized average flow rates and average constituent concentration measured at each system. There is currently flow metering equipment available to estimate flow rates at the BAP seepage collection systems (i.e., the Toe Drain System, Petroglyph Seep, Tanner Wash Seep and the TWX area wells) and at the FAP seepage collection systems (i.e., Geronimo and Hunt). In addition, the contaminant mass removed during aquifer testing performed in 2021 at each area was included. Tables 4-1, and 4-2 show the results of this calculation. The total estimated mass removed at the FAP was 0.5 tons and at the BAP was 0.6 tons for a total removal of 1.1 tons of Appendix IV constituents in 2021. Fluoride represented 87% of the removed Appendix IV constituent mass during the year.

4.5 Semiannual Progress Report on Remedy Selection for the FAP and BAP

40 CFR §257.97(a) requires the preparation of semiannual reports which document the progress of remedy selection for CCR units that have potentially impacted groundwater until the remedy is selected. Accordingly, a semiannual report was prepared on July 15, 2021 which describes the progress of remedy selection for the FAP and the BAP and is presented as Appendix P.

This Annual GMCAR for 2021 fulfills the requirements of 40 CFR §257.97(a) for a subsequent semiannual progress report by providing updates on remedy selection (Section 4.3) and future planned activities (Section 5.0) for the FAP and BAP.

4.6 CCR Unit Closure Activities

During the reporting period APS progressed CCR unit closure activities as outlined in the following sections.

4.6.1 SEDI Closure

On October 30, 2020, APS provided notice of its intent to close the SEDI per 40 CFR §257.101(a)(1) and thus closure must be completed by October 30, 2025 per 40 CFR §257.102(f)(1)(ii). The closure plan for the SEDI (AECOM, 2020) includes closure by removal of CCR solids in accordance with 40 CFR §257.102(c) and consists of dewatering the pond, removing CCR deposits using conventional excavators and loaders, consolidation of the CCR material in another CCR unit located at the facility, and refilling the excavation with clean backfill material.

During the previous reporting period, the unit was drained, CCR was removed from the northwest corner of the SEDI footprint, and a new 60,000-gallon concrete tank system was constructed and commissioned to fulfill the function of the SEDI. In 2021, SEDI closure activities included: decontamination and demolishment of existing concrete structures within the unit (a divider wall, spillway, inlet structure, and outlet structure), removal of the decontaminated concrete structures to the facility's inert landfill, excavation of remaining CCR from the SEDI with placement of the excavated material in the BAM, and backfilling/compacting the excavation with clean soil. CCR removal from concrete structures and the SEDI footprint was visually inspected and certified by a professional engineer on October 13, 2021 (Appendix Q).

At the time CCR removal from the SEDI was completed, the unit was in Assessment Monitoring due to SSIs in boron, pH, and sulfate concentrations in groundwater over background declared in January 2018 (Wood, 2019a). Since transitioning to Assessment Monitoring on May 16, 2018, no Appendix IV constituents have been identified at SSLs over GWPSs. The SEDI will be considered closed when groundwater monitoring indicates that all Appendix IV constituents are less than GWPSs for two consecutive sampling events using the statistical procedures in 40 CFR §257.93(g) following removal of CCR from the unit. An update of the SDAWP will be conducted in 2022 to specifically address unit closure statistical evaluation (Section 5.0)

4.6.2 FAP and BAP Closure

As indicated in Section 4.4, a demonstration supporting a Site-specific deadline to initiate closure per 40 CFR §257.103(f)(2) was submitted by APS to the USEPA on November 30, 2020. The USEPA had not made a determination regarding the demonstration as of December 31, 2021. APS placed an Annual Progress Report Documenting the Continued Lack of Alternative Capacity and Progress Towards Closure of the FAP and BAP (Appendix R) in the facility operating record on November 29, 2021.

5.0 Key Activities For 2022

During 2022, the following key activities will likely be conducted to support CCR groundwater monitoring and corrective action compliance at the Site:

- *Preparation of an Annual Groundwater Monitoring and Corrective Action Report for 2022* – Per 40 CFR §257.90(e), an annual report documenting groundwater monitoring and corrective action activities in 2022 will be prepared no later than January 31, 2023.
- *Update of the SDAWP and Statistical Analyses for the BAP and FAP* – The Site Statistical Data Analysis Work Plan will be updated to include statistical analyses to support unit closure as needed. Statistical analyses will also be conducted for any notable GWPS exceedances that are not currently COCs for the BAP and FAP.
- *Update of the SAP* – As the SAP for the Site was originally developed by Montgomery & Associates in 2015, the SAP will be updated in 2022. Additionally, the SAP will need to be updated as part of remedy selection for the FAP and BAP.
- *Continued Detection Monitoring at the BAM with Ongoing Statistical Evaluation for SSIs Over Background* – Per 40 CFR §257.94(b), detection monitoring (including analysis of collected samples for Appendix III constituents) will continue on a semiannual basis. On an ongoing basis, it will be determined whether there has been an SSI over background at the CCR units undergoing detection monitoring within 90 days of sampling and analysis (40 CFR §257.93[h][2]).
- *Initiation of Assessment Monitoring for CCR Units with an SSI over Background (as applicable)* – Per 40 CFR §257.94(e)(1), within 90 days of detecting an SSI over background levels for any Appendix III constituent, an assessment monitoring program must be established.
- *Continued Assessment Monitoring at the BAP, FAP, and SEDI* – While corrective action evaluation progresses at the BAP and FAP, assessment monitoring (including analysis of collected samples for Appendix III and Appendix IV constituents) must be conducted on a semiannual basis per 40 CFR §257.95(b) and (d)(1). At the SEDI, assessment monitoring will continue until statistical evaluation pursuant to 40 CFR §257.93(g) demonstrates that all Appendix IV constituents are less than GWPSs for two consecutive sampling events after removal of CCR from the unit was completed.

- *Laboratory Transition* – A plan to consider transitioning to other laboratories for groundwater quality evaluations will be prepared in 2022. This plan may also be implemented during 2022.
- *Preparation of BAP Pre-Design Studies Reports* – Analyses and summaries of BAP Pre-Design data collected in 2021 will be compiled and prepared as several reports in 2022. These reports will likely include the following;
  - *BAP Well Completion Report* – A well completion report documenting the installation of new BAP wells and aquifer testing of the select new extraction and monitoring wells downgradient of the BAP.
  - *BAP Geophysical Survey Report* – A report summarizing the field activities and findings of the geophysical surveying conducted in Tanner Wash upgradient of the BAP.
  - *BAP Geochemical Evaluation Report* – A geochemical report documenting solid and aqueous matrix samples collected at the BAP and an evaluation of the results. This will include evaluation of additional constituents collected during CCR monitoring events throughout 2021.
  - *BAP Pre-Design Summary Report* – An abridged report summarizing the findings of the above reports as they relate to one another.
- *Updates to the Numerical Groundwater Model* – The existing numerical groundwater model for the Site to assist in the evaluation and selection of remedies for the FAP and BAP will be updated in 2022.
- *Interim Response Measures at the FAP and BAP* – In tandem with additional field investigations, interim response measures outlined in Section 4.4.2 will continue to limit the groundwater impacts from the FAP and BAP while remedies are being evaluated and selected.
- *FAP Closure* – As part of planned unit closure at the FAP, APS will continue to develop and potentially implement a dewatering design.
- *Public Meeting* – Per 40 CFR §257.96(e), APS will conduct a public meeting with interested and affected parties to present the results of the ACM for the FAP and the BAP at least 30 days prior to selecting remedies for each CCR unit.
- *Remedy Selection* – APS will select remedies for the FAP and the BAP that meet the requirements of 40 CFR §257.97(b). Additionally, a remedy selection report for each unit per 40 CFR §257.97(a) will be prepared.
- *Initiation of Remedial Activities* – Per 40 CFR §257.91(f), APS will begin remedial activities at the FAP and the BAP within 90 days of selecting a remedy for each unit.

Since the nature of corrective actions is implemented in phases based on analysis of data collected during the groundwater monitoring program, the foregoing list only includes reasonably probable activities that will occur in 2022; this list is not comprehensive.

Tables

Table 1-1
Description of Coal Combustion Residual Units

CCR Unit	Function	Operation	Size/Construction	History
Fly Ash Pond (FAP)	*Single CCR unit* - surface impoundment to store slurried fly ash from the plant.	Receives a slurry from the plant that contains primarily fly ash but may also contain some bottom ash, boiler slag, flue gas emission control residuals, boiler cleaning waste, oil/water separator solids, and storm water. Periodically receives solids from the SEDI.	- 430 acres in aerial extent. - Total storage capacity of about 18,000 acre-feet. - Normal operating pool elevation of 5,114 feet amsl.	- Constructed beginning in 1976 and placed into service in 1978. - Unlined; constructed on Moenkopi bedrock and a thin veneer of alluvial sediments. - The dam is constructed of earth fill with a central clay core that extends to bedrock where bedrock is shallow. In the central portion of the dam, where bedrock is deeper, a slurry cutoff wall extends one foot into bedrock or two feet into stiff clay.
Sedimentation Pond (SEDI)	*Single CCR unit* - collects water from drains around plant site, including storm water, process water, plant water, and slurry from plant leaks.	Collects discharge from on-site secondary wastewater treatment plant, effluent from the oil/water separator, vehicle wash water, plant wash water, and FGD wastes from scrubber or scrubber feed tank upsets. Water collected in the SEDI is pumped to Cholla's general water sump for recycling as process water.	- 1.3 acres in aerial extent. - Total storage capacity of 10.5 acre-feet. - Maximum pond depth of 10 feet. - the top of the pond side slope is at 5,019 feet amsl	- Placed into service in 1976. - Lined with a 2-foot-thick layer of compacted clay. - Constructed below grade. - Discharges to the SEDI ceased as of October 2020. - Demolition and excavation of SEDI complete as of October 2021.
Bottom Ash Pond (BAP)	*Single CCR unit* - surface impoundment to store slurried bottom ash from the plant.	Bottom ash is pumped to the BAP as a slurry. The bottom ash settles in the east and west upstream storage cells and the water is decanted to the reservoir and ultimately siphoned back to the plant for reuse. Slurry may also contain fly ash, boiler slag, flue gas emission control residuals, sedimentation pond effluent, cooling tower blowdown, oil/water separator effluent and solids, boiler cleaning waste, and storm water. Periodically receives solids from the SEDI.	- 105 acres in aerial extent. - Total storage capacity of 2,300 acre-feet. - Normal operating pool elevation of 5,117.8 feet amsl.	- Constructed beginning in 1976 and placed into service in 1978. - Unlined; constructed on Moenkopi bedrock and Tanner Wash alluvium. - Consists of a reservoir directly behind the dam and two storage cells upstream of the reservoir. - The dam is constructed of earth fill with a central clay core that extends to bedrock where bedrock is shallow. In the central portion of the dam, where bedrock is deeper, a slurry cutoff wall extends one foot into bedrock or two feet into stiff clay.
Bottom Ash Monofill (BAM)	*Single CCR unit* - landfill for bottom ash solids excavated from the BAP.	Bottom ash that has been drained of water is excavated from the BAP and permanently stored in the BAM.	- 41 acres in aerial extent.	- Placed into service in 1999.

Notes and Abbreviations:

ADWR - Arizona Department of Water Resources
AMSL - Above mean sea level (Vertical datum is NAVD 88)
BAM - Bottom Ash Monofill
BAP - Bottom Ash Pond
bgs - below ground surface
CCR - Coal combustion residuals
FAP - Fly Ash Pond
ft - feet
LCR - Little Colorado River
NA - Not Available
SEDI - Sedimentation Pond
* Abandoned well
**Approximate - elevation based on measured stickups

Notes and Abbreviations:

[1]Units are standard units
[2]Units are picocuries per liter
BAM - Bottom Ash Monofill
BAP - Bottom Ash Pond
BTV - Background Threshold Value
FAP - Fly Ash Pond
GWPS - Groundwater Protection Standard
mg/L - milligrams per liter
N/A - not applicable
SEDI - Sedimentation Pond

Certification Statement

I, Rebecca A. Weaver, as a qualified groundwater scientist and professional engineer have reviewed the Wood Report titled *Well Completion Report, Abandonment and Replacement Well Program*, Cholla Power Plant, Navajo County Arizona, Project # 14-2021-2011 dated January 18, 2022. I certify that the groundwater monitoring system components that are documented in this report have been designed and constructed for the Arizona Public Service Company Cholla Power Plant as required for compliance with coal combustion residuals (CCR) groundwater monitoring and corrective action requirements detailed in 40 Code of Federal Regulations (CFR) Part 257.

1.0 Introduction

Wood Environment & Infrastructure Solutions, Inc. (Wood) prepared this Well Completion Report to document the abandonment, installation, development, and aquifer testing of select wells at the Cholla Power Plant (the plant or the Site) in Navajo County, Arizona for Arizona Public Service Company (APS). The Abandonment and Replacement Program was developed to address extraction wells, monitoring wells, and piezometers at the Site that were not performing or collected data as intended when they were installed. Near the Fly Ash Pond (FAP), extraction wells Geronimo-A (GSX-1) and Geronimo-B (GSX-2) were abandoned and replaced with a single extraction well designated GSX-1R; monitoring wells W-123 and W-126 were abandoned and replaced with new monitoring wells designated W-123R and W-126R; piezometers F-111, F-91, and F-92 were abandoned and replaced with new piezometers designated F-111R, F-91R, and F-92R. Near the Sedimentation Pond (SEDI), monitoring well CR-1 was abandoned and replaced with a new monitoring well designated CR-1R. Near the Bottom Ash Pond (BAP), monitoring well W-307 was abandoned and replaced with new monitoring well designated W-307R.

1.1 Site Description

The Site is located north of the Little Colorado River in the Middle Little Colorado River watershed (Montgomery & Associates 2011, Montgomery & Associates 2017, AMEC 2012). Detailed facility descriptions are included in the referenced reports including the status of each unit. Currently the SEDI is in assessment monitoring, and the FAP and BAP are in corrective action status. The facilities and overview of the monitoring system is shown on Figure 1.

The relevant hydrostratigraphic units that are of interest for the wells and piezometers installed in this project include the alluvial aquifer for Tanner Wash and the Little Colorado River (LCR) and Wupatki and Moqui members of the Moenkopi Formation. Detailed descriptions of these hydrostratigraphic units are included in Wood, 2020b and Wood, 2021a. The alluvium in the area of interest is unconsolidated, heterogenous and consists of clay, silt, sand and gravel. The Moqui is comprised of pale brown to reddish-brown gypsiferous mudstone and siltstone beds with thin bands of green-grey and dark yellow siltstone. The Wupatki is comprised of thin bedded siltstone with some interbedded sandstone and mudstone, especially at the base of the unit (Wood 2020a).

1.2 Purpose and Objectives

The Abandonment and Replacement Program included several different well types with different functions. The purpose and objectives for replacing each well varied. The following sections describe the purpose and objectives for replacing each well or well grouping.

1.2.1 Screened Across Units or Cross-Contamination

In December 2020, APS installed four alluvial extraction wells (EW-01, EW-02, EW-03, EW-04) downgradient of the FAP (Wood 2021b). Extraction well EW-04, which was installed approximately 20 feet (ft) east of W-123, encountered the Moqui member of the Moenkopi Formation (Moqui) at 19 ft below ground surface (bgs). W-123 was screened from 14 to 29 ft bgs and W-126 was screened from 15 to 45 ft bgs. It was concluded the screens for these monitoring wells were completed across alluvium and the Moqui. The well logs for EW-01 through 04 are included in Appendix A and a summary of their construction information is included in Table 1. The Moqui was observed to be dry at EW-04, and groundwater was encountered in the overlying alluvium. It is likely these saturated conditions are similar at the locations of W-123 and W-126. The purpose of replacing W-123 and W-126 was to install monitoring wells screened in the alluvium to prevent the migration of groundwater in the alluvium into the Moqui. The locations of EW-01 through EW-04, W-123, W-123R, W-126, and W-126R are shown in Figure 2.

Piezometer F-91 was screened from 56 to 76 ft bgs across the contact between the Moqui and underlying Wupatki member of the Moenkopi Formation (Wupatki). Water levels monitored at F-91 during the aquifer tests of the new FAP extraction wells (EW-01 through EW-04) indicate some water level drawdown occurred at this piezometer during the EW-02 and EW-03 aquifer tests (Wood 2021b, Figure 8). As the new extraction wells were installed in alluvium, it is likely the drawdown at F-91 was due to a faulty annular seal and created a hydraulic connection between the alluvium and the underlying formations at this piezometer. The purpose of replacing F-91 was to install a piezometer screened only in the Wupatki. Additionally, the replacement piezometer (F-91R) was installed using a "telescoped" well seal to prevent the downward migration of alluvial groundwater into the underlying Moqui and Wupatki. Locations of F-91, EW-02, EW-03, and F-91R are shown in Figure 2.

1.2.2 Performance

An evaluation of the FAP Geronimo seepage intercept system indicated extraction wells GSX-1 and GSX-2 were inconsistent in operation, had relatively low extraction rates and erratic water levels. These performance issues were likely caused by the clogging of the extraction well screens (Wood, 2021d). The extraction well 0.010 inch (in) screen slot size was concluded to be inappropriate for the fine-grained alluvial sediments in which the wells were screened, and the well screens and/or filter packs may have become clogged by fine-grained sediments over time. The purpose of replacing both GSX-1 and GSX-2 was to install an extraction well with more appropriate screen size for the local alluvial sediments that would facilitate improved performance. It was decided to replace two extraction wells with a single extraction well (GSX-1R) since four additional extraction wells had been recently installed in the area (EW-01, EW-02, EW-03), and EW-04. The locations of GXS-1, GSX-2, GSX-1R, and EW-01 through EW-04 are shown in Figure 2.

Monitoring well W-307 was replaced because it is relatively older (installed in 1984), and samples collected during CCR monitoring events may not be accurately representative of groundwater conditions in the area. APS requested the abandonment and replacement of W-307 and it was replaced with W-307R. Location of W-307 and well W-307R are both shown in Figure 3.

1.2.3 Blockage, Damaged, or Non-Responsive

During various groundwater monitoring field activities, Wood field personnel observed a blockage in piezometer F-92 at approximately 23 ft bgs. Additionally, F-92 was screened from approximately 40 to 55 ft bgs, and the new FAP extraction wells (EW-01 through EW-04) installed in December 2020 identified the Moqui at depths no greater than 50 ft bgs near the toe of the FAP dam. F-92 was replaced with a new piezometer (F-92R) clear of blockage and screened solely in the alluvium. Locations of F-92, and F-92R are shown in Figure 2.

Piezometer F-111 was screened from 26 to 46 ft bgs within alluvium and located between GSX-1 and GSX-2. F-111 had shown no response to aquifer tests conducted at the new FAP extraction wells (EW-01 through EW-04), which are screened over similar depth intervals. Wood, 2021b, Figure 8 depicts water levels monitored at F-111, GSX-1, and GSX-2 during the EW-01-04 extraction well aquifer tests. As indicated, the aquifer tests induced drawdown of water levels at GSX-1 and GSX-2; these wells were each screened from 20 to 40 ft bgs and were located approximately 15 ft northwest and southeast of F-111. However, no water level drawdown appeared to have occurred at F-111. The lack of response at F-111 suggests this piezometer was either damaged or became clogged by fine-grained sediments. F-111 was replaced with a new piezometer (F-111R) clear of blockage and screened in the alluvium. Locations of F-111, GSX-1, GSX-2, EW-01 through EW-04, and F-111R are shown in Figure 2.

SEDI monitoring well CR-1 (screened from 25-45 ft bgs) was reported by APS to have become compromised by tree roots. Replacement well CR-1R was installed approximately 40 ft to the northeast of CR-1 with a screen depth interval of 28 to 48 ft bgs, also in the alluvial aquifer. The location of CR-1R was selected to increase the distance from nearby vegetation that was likely the source of the tree roots. The locations of CR-1 and CR-1R are shown in Figure 4.

2.0 Well Installation and Abandonment Activities

This section summarizes the well installation and abandonment activities for this project. The location of the new and abandoned wells is shown on Figures 2 through 4. A photographic log showcasing abandonment and replacement activities is included in Appendix B. The lithologic logs and well construction diagrams are included as Appendix A, and Appendix C presents the final survey report for the new wells and the abandonment monuments.

2.1 Pre-mobilization Activities

Prior to site mobilization, all required Notice of Intent to Abandon a Well (NOIA) and Notice of Intent to Drill (NOI) permits were obtained from the Arizona Department of Water Resources (ADWR). Wood also updated the existing Health and Safety Plan (HASP) for the Site and ensured all Wood field personnel and subcontractors received APS Fossil Generation Contractor Safety training. Wood contracted with a licensed Arizona driller, Boart Longyear (Boart) to conduct the well drilling, construction, and abandonments. All drilling and abandonment activities were performed with a sonic drill rig. Final ADWR documentation is included in Appendix D.

2.2 Well Abandonments

Well abandonment activities took place from April 29 to May 19, 2021 for all wells except W-307 which was abandoned September 9, 2021, and were conducted within compliance of all ADWR regulations regarding well abandonment. Surface completions, including any well pad, surface casing and or vault were fully removed. The inner well casing was fully removed from each well or over-drilled the entire length of the casing where full removal from total depth of the cased portion of the well to surface was not possible. The entire length of the abandoned well borehole was filled from the bottom up to surface grade with a grout mix consisting of approximately four 50-pound (lb) bags of Type I/II/V Portland Cement to one 50 lb bag of Quik-Gel Viscosifier via tremie pipe. The grout mixture was emplaced under sufficient pressure to fill voids and displace any water within the well with the tremie pipe remaining near the rising grout surface. Table 2 summarizes the wells abandoned and their locations.

A concrete sonotube monument was then installed at the surface of each abandonment location with a brass cap affixed within the center of the monument displaying the identification of the abandoned well, Figures 2, 3, and 4 show the locations of the abandoned wells.

2.3 Replacement Well Construction

Replacement well construction generally occurred right after the existing well was abandoned. Well construction activities took place from April 29 to May 19, 2021 for all wells except W-307R, which was drilled and constructed October 4-5, 2021. Well construction details are presented in Table 1 and are included on the lithologic logs (Appendix A).

2.3.1 Replacement Well Siting

Replacement monitoring wells W-123R and W-126R were sited downgradient of the FAP and within 10 ft of their corresponding abandoned predecessor wells. Replacement extraction well GSX-1R was sited between abandoned extraction wells GSX-1 and GSX-2 near the toe of the southern edge of the FAP. Replacement piezometer F-111R was also sited within 10 ft of its abandoned predecessor piezometer near the southern edge of the FAP. Replacement piezometers F-91R and F-92R were moved to the northeast of the original locations and placed along the APS access road due to the location of overhead power lines above the abandoned well. CR-1R was located approximately 40 ft to the northeast of the original well to increase the distance from nearby salt cedar tree and other root systems. W-307R is located within 10 ft to the north of the original well such that it is within the defined easement of the site with the United States Bureau of Land Management (BLM). Figures 2, 3, and 4 show the final locations of the replacement wells.

2.3.2 Replacement Well Drilling

Utility clearance was performed by Safe Site Utility Services, LLC on April 26, 2021 for all the sites but W-307R, which was done on September 13, 2021. Hydro-excavation of some of the well locations was performed by Riley Industrial Services, Inc. to depths of approximately 6 ft bgs prior to well drilling. The sites that were hydro-evacuated included W-123R, W-126R, GSX-1R, F-111R, F-91R, and F-92R.

Replacement well drilling activities occurred between April 28 and May 16, 2021 for all of the wells except for W-307R which occurred October 4 and 5, 2021. The boreholes for monitoring wells W-123R, W-126R, CR-1R and W-307R were drilled to an 8 in diameter, the borehole for extraction well GSX-1R was drilled to a 10 in diameter, and the boreholes for piezometers F-111R and F-92R were drilled to a 6 in diameter. The borehole for piezometer F-91R was drilled to accommodate installation of a telescoping well seal. This construction included drilling from grade to 52 ft bgs with an 8 in diameter borehole and then from 52 ft to 54 ft bgs was drilled to a 7 in diameter borehole. A bentonite seal was installed and allowed to cure overnight at least 3 ft on either side of the alluvium to Moqui contact at 50ft bgs, then the rest of the borehole was constructed with a diameter of 6 in from 54 ft bgs to 88ft bgs. This telescoping well seal construction method is designed to minimize any water moving between the different lithologic units. Drilling and well construction was supervised by a Wood field representative, and continuous formation samples were logged at 2.5 ft depth intervals using the Unified Soil Classification System.

Lithology encountered during drilling of CR-1R only include alluvium (clayey sand, sandy clay, silty clayey sand, sand, and sand with silt). Lithologies encountered during drilling of the FAP replacement wells include alluvium (clay, silt, clayey sand, sandy clay, sandy silt, silty sand, sandy clay, gravel with sand and silt), thick clay lenses, weathered to competent interbedded siltstone and shale often noted with gypsum typically identified as the Moqui and Wupatki. F-91R is screened in the Wupatki member of the Moenkopi and all other wells are screened in the alluvium. Descriptions of the formation samples are recorded on the lithologic logs included in Appendix A. Photographs of the formation samples are included in Appendix B.

Groundwater was encountered during drilling at each replacement well. At replacement well CR-1R, groundwater was encountered at 37.1 ft bgs within the alluvium. At FAP replacement wells W-123R, W-126R, F-111R, F-91R, and F-92R groundwater was encountered between 2.9 and 22.5 ft bgs within the alluvium. The upper contact between the alluvium and Moqui in replacement wells W-126R and GSX-1R were also noted to be moist, with moisture decreasing to nearly dry conditions within 1 ft at W-126, and within 1.5 ft at GSX-1R. The contact between the alluvium and the Moqui was also noted to be slightly moist and continued for at least 10 ft into the Moqui at F-91R. Below this depth interval conditions were dry but moist at various intervals especially in fractures once the Wupatki was encountered. During the drilling of W-123R there was also approximately 1 ft of moisture noted past the alluvium-Moqui contact with overlying alluvium being saturated. However, it was also noted that this continuation of moisture may have potentially been from drilling as advancement was difficult upon encountering the contact. Groundwater was encountered at approximately 27 ft bgs at W-307R during drilling.

2.3.3 Monitoring Wells CR-1R, W-123R, W-126R, W307R Construction

Monitoring wells W-123R, W-126R, CR-1R and W-307R are each completed with a 4 in nominal diameter Schedule (SCH) 80 polyvinyl chloride (PVC) well casing with a 4 in nominal diameter SCH 80 PVC screen with 0.020-in slot size. Filter pack material consists of 12-20 silica sand with a transitional sand seal of 20-40 silica sand installed above the filter pack. A well seal consisting of bentonite was installed above the transitional seal followed by a surface seal consisting of cement-bentonite grout. Surface completions are installed with a minimum 2 ft above-grade steel vault placed within a 3 ft by 3 ft concrete pad. CR-1R and W-126R had traffic bollards installed around the concrete pad and W-307R was painted brown.

The screened interval depth of CR-1R was selected to closely resemble the screened interval of abandoned well CR-1 while trying to avoid the depth interval over which root growth was noted in CR-1. The screen interval and final well construction details, including filter pack depth intervals, transitional sand depth intervals, and other seal materials and interval depths are detailed in Table 1 and on the well logs included in Appendix A.

The screened interval depths of W-123R and W-126R were selected to intercept the saturated portion of the alluvium. However, during drilling it was noted that moist and highly weathered Moqui bedrock was encountered starting at 14.5 ft bgs at W-123R and at 16 ft bgs at W-126R. W-123R was screened from 8 to 18 ft bgs while W-126R was screened from 9 to 19 ft bgs. Both of these wells were built with the ADWR mandated minimum cement grout surface seal of five feet and a 1-foot bentonite seal and transition sand layer to allow for the 10-foot screened section of the well to be placed as shallow as possible. There is a small section of screen (3.5 ft) in both of these wells in dry or slightly wet or moist Moqui, which indicates that these wells will likely only have alluvial water contributing to them and the minimal screen portion in the Moqui is unlikely to conduct alluvial water into the Moqui. Further details of final W-123R and W-126R well construction can also be found in in Table 1 and on the well logs included in Appendix A.

The screened interval depth of W-307R was selected to intercept the upper most saturated alluvium. W-307R was screened from 35 to 65 ft bgs. W-307R had to be re-drilled and re-constructed after the first well was found to be not constructed correctly or have a broken casing section as evidenced by the filter pack sand that was found in the well during development. Further details of final W-307R well construction can also be found in in Table 1 and on the well logs included in Appendix A.

2.3.4 Extraction Well GSX-1R Construction

Extraction well GSX-1R is completed with a 6 in nominal diameter SCH 80 PVC well casing with a 6 in nominal diameter SCH 80 PVC screen with 0.020 in slots. The same filter pack sand, transitional seal sand, well seal, and surface seal materials used for the replacement monitoring wells (CR-1R, W-123R, W-126R) were also used for GSX-1R. The surface completion at GSX-1R consists of a minimum 2 ft above-grade steel vault placed within a 3 ft by 3 ft concrete pad.

The screen interval depth of GSX-1R was selected to be similar to that of abandoned well GSX-1 and GSX-2. The screen interval and other final well construction details are outlined in Table 1.

2.3.5 Piezometers F-111R, F-91R, F-92R Construction

Piezometers F-111R, F-91R and F-92R are each completed with a 2 in nominal diameter SCH 80 PVC well casing with a 2 in nominal diameter SCH 80 PVC screen with 0.020 in slots. The same filter pack sand, transitional seal sand, well seal, and surface seal materials used for the replacement monitoring and extraction wells (CR-1R, W-123R, W-126R, W-307R, GSX-1R) were also used for the piezometers. The surface completion at the replacement piezometers consists of a minimum 2 ft above-grade steel vault placed within a 3 ft by 3 ft concrete pad.

The screen interval depth of F-111R and F-92R were selected to be similar to that of abandoned piezometers F-111 and F-92 respectively, and to intercept the saturated portion of the alluvium. The screen interval depth of F-91R was selected to intercept any groundwater within the Wupatki. Final screen depth intervals and other well construction details of the replacement piezometers are outlined in Table 1.

2.3.6 Replacement Well Development

All replacement wells were developed between June 2 and June 20, 2021 except for W-307R which was developed on October 11, 2021. Development techniques varied based on the amount of water produced at each well, but generally consisted of:

- Surging and bailing the well until the amount of sediment produced by each cycle was reduced to trace amounts; and
- Development pumping using a Grundfos Monsoon pump.

Well development results are summarized in Table 3. Successful well development (which is typically defined by purging a well until water turbidity reaches less than 5 nephelometric units [NTU]) was achieved at CR-1R, W-123R, W-126R, while development of GSX-1R, F-111R, F-91R, and F-92R was unsuccessful due to the high level of fine sediment in the well and limited time for development. A final turbidity measurement was not available for W-307R, however visually the water clear and likely achieved successful development.

2.4 Management of Investigation-Derived Waste

Investigation-derived waste consisted of groundwater pumped during well development and soil cuttings produced during drilling. Groundwater pumped from the wells during development was directed to trailer mounted tank and then transported to either the SEDI tank or the BAP toe drain sump for disposal. Drill cuttings were spread on the ground surface near each well site.

2.5 Replacement Well Survey

The location, surface elevation, and measuring point elevation for each well was surveyed by Martin Land Surveys, a registered Arizona land surveyor, on November 8, 2021. The location and surface elevation of the well abandonment monument for each abandoned well was also surveyed at this time. Tables 1 and 2 summarizes the survey data, and the final survey report is included as Appendix C.

3.0 Aquifer Testing

One step-rate and one constant-rate aquifer test was performed on GSX-1R to evaluate well performance and estimate local aquifer properties (e.g., transmissivity and hydraulic conductivity). Water level impacts were recorded at observation points EW-03 and F-111R during both aquifer tests (Figure 5).

3.1 Aquifer Test Equipment and Extracted Groundwater Management

A 3 in nominal diameter test pump (Grundfos ½ horsepower [HP] 5 gallons per minute [gpm] SQ) was used to conduct the step-rate aquifer test, and a 2 in nominal diameter test pump (Proactive 12 Volt Mini Monsoon) was used to conduct the constant-rate aquifer test. Pumping rates were determined by observing the time required to fill a container of known volume and were verified at approximately 5-to-10-minute intervals throughout the aquifer tests. Water-level data was recorded at test and observation wells using In-Situ Level TROLL® 700 pressure transducers with a vented cable and water levels at GSX-1R were verified with a water-level meter. Groundwater pumped during the aquifer tests was containerized at the test well location before conveyance to the SEDI tank for disposal.

3.2 GSX-1R Testing

Step-rate testing of GSX-1R was performed on June 28, 2021. The test pump intake was installed at 49.1 ft bgs and the GSX-1R static water level (swl) was 23.30 ft bgs. The step-rate test consisted of pumping GSX-1R at three different steps (i.e., pumping rates) for approximately 60 minutes per step. Pumping rates ranged from 1.0 to 1.5 gpm and drawdown was relatively stable during the first pumping step of 1.0 gpm. Approximately 7.40 ft of drawdown occurred during the first step, equating to a specific capacity of 0.14 gpm/ft. Figure 6 depicts the drawdown data collected throughout test.

Constant-rate testing of GSX-1R was performed on July 28 and 29, 2021. The test pump intake was installed at 50.9 ft bgs and the swl was measured at 22.23 ft bgs, which equates to over 100 percent (%) recovery to the swl after conducting the step-rate test. Based on the results of the step-rate test, a pumping rate of 1.0 gpm was selected for the constant-rate test. The test began at 14:00 at a pumping rate of 1.0 gpm after initial problems maintaining a constant-rate with other temporary pumps. Due to time constraints and the issues encountered initially, the constant rate test ran at just under 1.0 gpm for approximately 18.5 hours. This pumping rate was selected as it was the lowest stable pumping rate that could be achieved with the pump available. At low (<5 gpm) pumping rates, achieving a consistent rate is also difficult and the pumping rate during the constant rate test had to be continually adjusted. Figure 7 presents a linear plot of GSX-1R time-drawdown data and recovery data.

After stopping the test pump, water-level recovery was monitored for approximately 51 minutes. The GSX-1R water level recovered to over 90 % of the swl approximately 51 minutes after stopping the pump.

Wells F-111R, EW-03, EW-01, EW-04, F-91R, F-92R, W-123R, and W-126R were all monitored for water level changes during both the step and constant rate tests (Figure 5). There were only measurable changes in the water levels in wells F-111R and EW-03, therefore only these two wells were included in the analysis. The pressure transducer in EW-03 had to be removed before complete recovery occurred in that well due to staff time constraints. Recovery was approximately 58% in EW-03 when the pressure transducer was removed.

Drawdown was observed in both EW-03 and F-111R during step rate and constant rate testing at GSX-1R. Figure 8 presents a linear plot of time-drawdown observed at both observation wells during the step-rate test and Figure 9 presents a linear plot of time-drawdown observed at both observation wells during the constant-rate test. Pumping in GSX-01R had a greater influence on the water located at F-111R than at EW-03. Following the constant-rate test, recovery was monitored at F-111R for approximately 150 minutes and at EW-03 for 139 minutes after the pump at GSX-01R was stopped.

3.3 Aquifer Test Analysis

The results from the aquifer test were evaluated using several analytical solutions included in the AQTESOLV (Duffield, 1996) software package. Results of the AQTESOLV analyses are described in the following sections and presented as Appendix E.

To evaluate the aquifer test results the conceptual site model (CSM), as described in Wood 2020b**,** was used to base the analysis assumptions. In addition, the local hydrogeologic conditions were assessed by reviewing lithologic logs, well construction diagrams and previous aquifer testing done in the area (Wood, 2021b and Wood, 2021c). The alluvial aquifer receives recharge from the LCR and leakage from the FAP. It consists of unconsolidated, heterogeneous layers of clay, silt, sand, and gravel. Generally, water flows west-southwest through fine grained layers. The heterogeneity of the alluvial aquifer in the area of the FAP likely results in variable thickness and hydraulic conductivity over small areas. Only low flow rates have been possible from wells that are completed in this aquifer, making it difficult to conduct a steady flow constant-rate test that impacts enough of the aquifer to average the heterogeneity and make a general evaluation of the larger aquifer area around subject wells.

The thickness of the aquifer (b) of 24 ft was based on the saturated thickness is the pumping well, GSX-1R. This was determined by the vertical distance from the static water level prior to the beginning of the aquifer testing of 25.2 ft bgs to the alluvial contact with the Moqui at 49.5 ft. This value is consistent with the aquifer thickness (19 and 27 ft) used in other analyses of alluvial wells located in the same area (Wood, 2021c). The hydraulic conductivity anisotropy ratio of vertical (Kz) to radial conductivities (Kr) was assumed to be 0.01 which is consistent with the expected range of alluvium with clay layers present.

Hydraulic conductivities were estimated using the following equation:

$$T=kb$$

(T=transmissivity [ft^2/day], k=hydraulic conductivity [ft/day], and b=aquifer thickness [ft])

The Hantush-Jacob solution for a pumping test was selected as the most applicable solution for this location. This solution assumes the following: homogenous, isotropic, leaky, confined aquifer with steady flow (no storage) in the aquitard(s) (Hantush and Jacob, 1955). Applying the principle of superposition in time, Theis (1935) proposed a straight-line solution for determining transmissivity and storativity from residual drawdown (i.e., the drawdown in a well after pumping stops) data collected during the recovery phase of a pumping test. The solution assumes a line source for the pumped well and therefore neglects wellbore storage and was selected to analyze the recovery data of the pumping well GSX-1R.

3.4 GSX-1R Aquifer Test Analysis Results

The GSX-1R constant-rate test drawdown data was analyzed using the Hantush-Jacob and Theis methods, which produced transmissivity values ranging from 2.8 ft^2/d (21 gallons per day [gpd]/ft) to 126.4 ft^2/d (945 gpd/ft). Table 4 includes a summary of the results from the aquifer test analysis of the pumping well GSX-1R and two observation wells, F-111R and EW-3. Hydraulic conductivities in the range of 0.1 ft/d to 5.3 ft/d were estimated using the transmissivities obtained from the aquifer test analysis and the saturated thickness. The average transmissivity excluding the pumping well data analysis is 83.6 ft^2/d (625 gpd/ft) for this aquifer test and the average hydraulic conductivity is 3.5 ft/d, also excluding the pumping well analysis.

As indicated on the GSX-1R time-drawdown curve (Figure 7), drawdown did not stabilize during the 18 hour constant-rate test at a pumping rate of 1 gpm.

The results of this aquifer test are consistent with the results other recent aquifer tests completed in the area around the base of the FAP in alluvial wells. Four aquifer tests conducted on wells EW-01 through 04 had an average transmissivity of 102 ft^2/d (Wood 2021b).

3.5 Zone of Influence

As noted in Sections 3.2 and 3.3 above, water levels at wells F-111R and EW-03 were influenced by the aquifer test at GSX-1R. F-111R is the closest to the pumping well and is approximately 30 ft to the northwest of GSX-1R. EW-03 is approximately 88 ft away from GSX-1R also in the northwest direction. EW-04 and W-123R were also monitored and were not influenced by the aquifer test. EW-04 is 92 ft and W-123R is 111 ft, both to the southeast of the pumping well. All other wells monitored had no discernable influence from the aquifer test. It is hypothesized that this limited zone of influence impacting only wells to the northwest of GSX-1R is due to a heterogeneous aquifer exhibiting limited connectivity and disconnected water bearing zones. Similar hydraulic connectivity zones were evident in the aquifer testing done in early 2021 at wells EW-01 through 04 (Wood, 2021b). In those tests, EW-01, EW-02 and EW-03 all impacted nearby wells with the exception of the wells located southwest of those pumping wells. EW-04 as the pumping well had no impact to wells located northwest of the well, but did influence the nearest well to the southwest, W-126.

4.0 Groundwater Sampling

Groundwater samples were collected from the monitoring and extraction wells for this project. Where possible, a sample was collected during development and by low flow methods at least once at each well. The samples for the low flow method were collected in accordance with the sampling and analysis plan developed for the site (Montgomery & Associates, 2015). The samples were submitted to Eurofins TestAmerica Laboratories, Inc., an Arizona Department of Health Services-licensed laboratory (AZ0728), for analysis of arsenic, cobalt, fluoride, lithium, molybdenum, iron, and water quality ions.

The laboratory analytical reports are included as Appendix F. Analytical results are present in Table 5 for the wells near the FAP (W-123R, W-126R and GSX-1R), Table 6 for CR-1R and Table 7 for the well at the BAP (W-307R). Samples were collected from GSX-1R during the constant-rate aquifer test and analyzed for boron and fluoride (Table 5). The results are comparable to water quality data that has historically been collected at the original wells.

5.0 Summary And Recommendations

The aquifer test for extraction well GSX-1R induced a small amount (<1ft) of drawdown at two wells EW-03 and F-111R, both to the northwest of the well. There was no impact to the nearest wells located to the southeast of the pumping well (EW-04 and W-123R). This is similar to the hydraulic connectivity that was shown during the EW-01, EW-02 and EW-03 aquifer testing (Wood, 2021b). There are likely at least two poorly or not connected at all water bearing alluvial zones in the area around the base of the FAP.

The step test for GSX-1R only had one step that had data that allowed a specific capacity of 0.14 gpm/ft to be calculated. This value is lower than the specific capacities calculated for EW-01 through 04 in Wood, 2021b.

It is recommended that extraction well GSX-1R be equipped with a submersible pump capable of a design pump rate of 0.75 gpm to allow for a constant pumping rate that minimizes pump start/stop cycles.

Well Survey Report

Martin H. Martin, LS
1612 N. Transwestern
Pump Rd.
Bellemont, AZ 86015
928-853-2298 Main

Serving Northern Arizona
since 1986.

Date: November 8, 2021

Mari Wuollet
Wood, PLC
4600 E. Washington – Suite 600
Phoenix, AZ 85034

Mari:

Attached is the coordinate and elevation list for the wells we recently surveyed. The data is in pdf and excel format.

Please note that the data is in State Plane Coordinates, Arizona, East Zone., International Feet.

If you have any questions, please give me a call.

Sincerely,

Martin H. Martin, LS

Monitor Well Data - Cholla Power Plant - November 8, 2021

To: Toms, Christopher
Subject: Re: ADWR Driller's Packets

Hello Chris,

Thanks for sending that over, that sounds good to me. Feel free to begin operations using that initial abandonment card I sent for this well.

Thank you,

Jackson Lange

On Mon, May 3, 2021 at 4:05 PM Toms, Christopher <christopher.toms@boartlongyear.com> wrote:

Hello Jackson-

This email is a follow up to our conversation on the phone about 55-482995. We are unable to tower a rig over this well due to over head utilities that were installed after this well was drilled. Our plan of attack on this well is to tag the bottom of the well to establish the correct depth (suspected to be 54-56') . After tagging we are going to use ½" poly tubing as treme pipe and pump neat cement from the bottom of the well to 20' bgs. We will attempt to remove the top 20' of the well by pulling with a fork lift in hopes to insure a proper surface seal. If unsuccessful, we will fill up what we can with neat cement. Let me know if this plan will work for you and we will start the process.

Thanks,

Christopher Toms

Well Abandonment Completion Report

FILE NUMBER
A(18-20) 30 CBD
WELL REGISTRATION NUMBER
55 - 482992

❖ Review instructions prior to completing form
❖ The drilling firm or single well licensee must file this report withing 30 days of completion of abandonment. (A.R.S. § 45-594, A.A.C. R12-15-816)

** PLEASE PRINT CLEARLY **

SECTION 1. ABANDONMENT AUTHORIZATION

Drilling Firm (Mail To:)

NAME BOART LONGYEAR COMPANY	DWR LICENSE NUMBER 83
ADDRESS 7103 W. AUGUSTA AVENUE	TELEPHONE NUMBER 623-889-7523
CITY / STATE / ZIP GLENDALE, AZ 85303	FAX 623-486-1885

SECTION 2. REGISTRY INFORMATION

Well Owner Information

FULL NAME OF COMPANY, ORGANIZATION, OR INDIVIDUAL ARIZONA PUBLIC SERVICE	CONTACT PERSON NAME AND TITLE Clay Cady, Senior hydrologist
MAILING ADDRESS PO BOX 188 M/S 4458	TELEPHONE NUMBER 602-250-4617
CITY / STATE / ZIP JOSEPH CITY, AZ 86032	FAX

Location of Well

WELL LOCATION ADDRESS (IF ANY)

LATITUDE: 34 ° Degrees 55 ' Minutes 41.9 " N Seconds
LONGITUDE: 110 ° Degrees 16 ' Minutes 2.5 " W Seconds

TOWNSHIP (N/S)	RANGE (E/W)	SECTION	160 ACRE	40 ACRE	10 ACRE
18.0N	20.0E	30	SW 1/4	NW 1/4	SE 1/4

LAND SURFACE ELEVATION AT WELL: 5044 Feet Above Sea Level

METHOD OF LATITIDE / LONGITUDE (Check One): ☐ USGS Quad Map ☐ Conventional Survey ☒ *GPS: Hand-Held ☐ *GPS: Survey-Grade

COUNTY ASSESSOR'S PARCEL ID NUMBER

BOOK	MAP	PARCEL
109	31	019

*If GPS WAS USED, GEOGRAPHIC COORDINATE DATUM (Check One): ☒ NAD-83 ☐ Other *(please specify)*:

SECTION 3.

Questions	Yes	No	Explanation:
1. To your knowledge, is there any information that exists which indicates that the water in this well has been, may be or is contaminated?		X	IF YES, EXPLAIN (Attach additional page if nesessary)
2. Is there another well name or identification number associated with this well? (e.g., MW-1, PZ-4, Lot 29 Well, Smith Well, etc.)	X		IF YES, PLEASE STATE F-111
3. Prior to abandonment, did the well have 20' of surface casing and 20' of grout in the annular space surrounding the casing?		X	If no, was the top 20' of casing removed prior to setting the cement plug? ☒ Yes ☐ No
4. Was the well backfilled above the cement plug?		X	
5. Was the well casing video logged?		X	

6. Why was the well abandoned?
NO Aquifer Communication

wood.	**Figure 7** Typical Well Abandonment	Arizona Public Service Cholla Power Plant Navajo County, Arizona Date: April 2021

Form 2800-14
(August 1985)

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

RIGHT-OF-WAY GRANT/TEMPORARY USE PERMIT

Issuing Office
LLAZG010000

Serial Number
AZA 18679

1. A (right-of-way) (permit) is hereby granted pursuant to:

   a. ☑ Title V of the Federal Land Policy and Management Act of October 21, 1976 (90 Stat. 2776; 43 U.S.C. 1761);

   b. ☐ Section 28 of the Mineral Leasing Act of 1920, as amended (30 U.S.C. 185);

   c. ☐ Other *(describe)* __________

2. Nature of Interest:

   a. By this instrument, the holder **Arizona Public Service** receives a right to construct, operate, maintain, and terminate a **amended existing ROW (See Below)** on public lands (or Federal land for MLA Rights-of-Way) described as follows:

The existing ROW was granted in November of 1983 for an existing road, three monitoring wells, and three well pads and for a 20-year term. Only one well and one pad were completed. On December 15, 1992, the ROW grant was amended to include two seepage intercept systems and a 35-year term. The amendment has an expiration of 12/14/2027 at which time it may be renewed.

The original ROW is further amended to also include:

- Relinquish the two well pads and side road that were never developed.
- Drill a new well adjacent to the existing well within the disturbed well pad area.
- Abandon the existing well according to Arizona Department of Water Resources (ADWR).
- Add the realigned portions of the road due to erosion that has occurred and a segment of existing road on the southwest end of the ROW not in original grant. The approximate length to be added is 1,222 feet.

Well Location	Long	Lat
New Well within existing well pad	-110.285116	34.949714
Existing Well within well pad	-110.285117	34.94969

The seepage intercept systems are to remain in the existing ROW grant.

There will be no new disturbance outside of the existing ROWs. No temporary work areas are needed to construct the proposed wells.

   b. The right-of-way or permit area granted herein is NA feet wide, NA feet long and contains 1.91 acres, more or less. If a site type facility, the facility contains ______ acres.

   c. This instrument shall terminate on 12/14/2027, 35 years from its effective date unless, prior thereto, it is relinquished, abandoned, terminated, or modified pursuant to the terms and conditions of this instrument or of any applicable Federal law or regulation.

   d. This instrument ☑ may ☐ may not be renewed. If renewed, the right-of-way or permit shall be subject to the regulations existing at the time of renewal and any other terms and conditions that the authorized officer deems necessary to protect the public interest.

   e. Notwithstanding the expiration of this instrument or any renewal thereof, early relinquishment, abandoment, or termination, the provisions of this instrument, to the extent applicable, shall continue in effect and shall be binding on the holder, its successors, or assigns, until they have fully satisfied the obligations and/or liabilities accruing herein before or on account of the expiration, or prior termination, of the grant.

(Continued on page 2)

3. Rental:

For and in consideration of the rights granted, the holder agrees to pay the Bureau of Land Management fair market value rental as determined by the authorized officer unless specifically exempted from such payment by regulation. Provided, however, that the rental may be adjusted by the authorized officer, whenever necessary, to reflect changes in the fair market rental value as determined by the application of sound business management principles, and so far as practicable and feasible, in accordance with comparable commercial practices.

4. Terms and Conditions:

a. This grant or permit is issued subject to the holder's compliance with all applicable regulations contained in Title 43 Code of Federal Regulations parts 2800 and 2880.

b. Upon grant termination by the authorized officer, all improvements shall be removed from the public lands within **180** days, or otherwise disposed of as provided in paragraph (4)(d) or as directed by the authorized officer.

c. Each grant issued pursuant to the authority of paragraph (1)(a) for a term of 20 years or more shall, at a minimum, be reviewed by the authorized officer at the end of the 20th year and at regular intervals thereafter not to exceed 10 years. Provided, however, that a right-of-way or permit granted herein may be reviewed at any time deemed necessary by the authorized officer.

d. The stipulations, plans, maps, or designs set forth in Exhibit(s) **A and B**, dated **06/23/2021**, attached hereto, are incorporated into and made a part of this grant instrument as fully and effectively as if they were set forth herein in their entirety.

e. Failure of the holder to comply with applicable law or any provision of this right-of-way grant or permit shall constitute grounds for suspension or termination thereof.

f. The holder shall perform all operations in a good and workmanlike manner so as to ensure protection of the environment and the health and safety of the public.

IN WITNESS WHEREOF, The undersigned agrees to the terms and conditions of this right-of-way grant or permit.

(Title)	(Title)
18 August 2021	8/26/21
(Date)	(Effective Date of Grant)

Exhibit A: Realty Stipulations

1. This grant is issued subject to the holder's compliance with all applicable regulations contained in Title 43 Code of Federal Regulations part 2800.

2. Any archaeological or historical artifacts or remains, or vertebrate fossils discovered during construction, maintenance and use shall be left intact and undisturbed; all work in the area shall stop immediately and the Authorized Officer shall be notified immediately. Commencement of operations shall be allowed upon clearance by the Authorized Officer.

3. An additional cultural and paleontological resource survey may be required in the event that the project location is changed, or additional surface disturbing operations are added to the project after the initial survey. Any such survey would have to be completed prior to commencement of operations.

4. If in connection with operations under this authorization, any human remains, funerary objects, sacred objects of cultural patrimony as defined in the Native American Graves Protection and Repatriation Act (P.L. 101-601; Stat. 3048; U.S.C. 3001) are discovered, the permittee shall stop operations in the immediate area of the discovery, protect the remains and objects, and immediately notify the Authorized Officer of the discovery. The permittee shall continue to protect the immediate area of the discovery until notified by the Authorized Officer that operations may resume.

5. The proponent and any contractors will need to thoroughly power wash and remove all vegetative material and soil before transporting equipment to the construction site to minimize the threat of spreading noxious and invasive weeds. This includes trucks, trailers, and all other machinery. The contractor, in concert with the BLM, will be responsible for weed control on disturbed areas within the limits of the Right-of-Way or construction site. The proponent and contractor will be responsible for consultation with the Authorized Officer and local authorities for implementing acceptable weed treatment methods. Any use of chemical treatments requires the submission of a Pesticide Use Proposal (PUP) to the ROW Specialist, and approval by the BLM Pesticide Use Coordinator. The applications will abide by all safety and application guidelines as listed on the produce label and Material Safety Data Sheet (MSDS). Any reclamation efforts requiring seeding will need to be done with certified, weed-free native seed. Contact BLM for approved sources of native seed, certified testing and mixtures. All herbicidal treatments must comply with: Record of Decision, Vegetation Treatments Using Herbicides on BLM Lands in 17 Western States, EIS, 2007, Herbicide Active Ingredients Approved for Use; Record of Decision, Vegetation Treatments Using Aminopyralid, Fluroxypyr, and Rimsulfuron on BLM Lands in 17 Western States, 2016.

6. Upon grant termination by the Authorized Officer, all improvements shall be removed from the public lands within 180 days, or otherwise disposed of as provided by the authorized officer.

7. All operations shall be performed in a good and workmanlike manner so as to ensure protection of the environment and the health and safety of the public.

8. All activities directly or indirectly associated with construction, operation and maintenance shall be conducted within the limits of the approved right-of-way. This right-of-way does not allow for any surface disturbing activities outside the right-of-way area.

9. The holder(s) shall comply with all applicable Federal laws and regulations existing or hereafter enacted or promulgated. In any event, the holder(s) shall comply with the Toxic Substances Control Act of 1976, as amended (15 U.S.C. 2601, et.seq.) with regard to any toxic substances that are used, generated by or stored on the right-of-way or on facilities authorized under this right-of-way grant. (See 40 CFR, Part 702-799 and especially, provisions on polychlorinated biphenyls, 40 CFR 761.1-761.193.) Additionally, any release of toxic substances (leaks, spills, etc.) in excess of the reportable quantity established by 40 CFR, Part 117 shall be reported as required by the Comprehensive Environmental Response, Compensation and Liability Act of 1980, Section 102b. A copy of any report required or requested by any Federal agency or State government as a result of a reportable release or spill of any toxic substances shall be furnished to the Authorized Officer concurrent with the filing of the reports to the involved Federal agency or State government.

10. The holder shall notify the Authorized Officer prior to commencement of emergency maintenance outside the right-of-way to discuss repair and construction activities, since the authorization is within the boundaries of the Tanner Wash Area of Critical Environmental Concern (ACEC).

11. No construction or routine maintenance activities shall be performed during periods when the soil is too wet to adequately support construction equipment. If such equipment creates ruts in excess of 4 inches deep, the soil shall be deemed too wet to adequately support construction equipment.

12. The holder must amend the right-of-way grant at any time additional land, equipment, and/or new uses are proposed which are beyond the scope of the existing authorization.

13. At least 60 days prior to termination of the right-of-way, the holder shall contact the Authorized Officer to arrange a joint inspection of the right-of-way. This inspection will be held to agree to an acceptable termination (and rehabilitation) plan. This plan shall include, but is not limited to, removal of facilities, drainage structures, or surface material, recontouring, top soiling, or seeding. The Authorized Officer must approve the plan in writing prior to the holder's commencement of any termination activities.

14. The holder shall notify the Authorized Officer of any address change that occurs during the term of the right-of-way.

15. Any changes to the authorization require prior written approval from the Authorized Officer.

Form 2800-14
(August 1985)

UNITED STATES
DEPARTMENT OF THE INTERIOR
BUREAU OF LAND MANAGEMENT

RIGHT-OF-WAY GRANT/TEMPORARY USE PERMIT

Issuing Office
LLAZG010000

Serial Number
AZA 18679

1. A (right-of-way) (permit) is hereby granted pursuant to:

a. ☑ Title V of the Federal Land Policy and Management Act of October 21, 1976 (90 Stat. 2776; 43 U.S.C. 1761);

b. ☐ Section 28 of the Mineral Leasing Act of 1920, as amended (30 U.S.C. 185);

c. ☐ Other *(describe)* ________

2. Nature of Interest:

a. By this instrument, the holder **Arizona Public Service** receives a right to construct, operate, maintain, and terminate a **amended existing ROW (See Below)** on public lands (or Federal land for MLA Rights-of-Way) described as follows:

The existing ROW was granted in November of 1983 for an existing road, three monitoring wells, and three well pads and for a 20-year term. Only one well and one pad were completed. On December 15, 1992, the ROW grant was amended to include two seepage intercept systems and a 35-year term. The amendment has an expiration of 12/14/2027 at which time it may be renewed.

The original ROW is further amended to also include:

- Relinquish the two well pads and side road that were never developed.
- Drill a new well adjacent to the existing well within the disturbed well pad area.
- Abandon the existing well according to Arizona Department of Water Resources (ADWR).
- Add the realigned portions of the road due to erosion that has occurred and a segment of existing road on the southwest end of the ROW not in original grant. The approximate length to be added is 1,222 feet.

Well Location	Long	Lat
New Well within existing well pad	-110.285116	34.949714
Existing Well within well pad	-110.285117	34.94969

The seepage intercept systems are to remain in the existing ROW grant.

There will be no new disturbance outside of the existing ROWs. No temporary work areas are needed to construct the proposed wells.

b. The right-of-way or permit area granted herein is **NA** feet wide, **NA** feet long and contains **1.91** acres, more or less. If a site type facility, the facility contains ______ acres.

c. This instrument shall terminate on **12/14/2027**, **35** years from its effective date unless, prior thereto, it is relinquished, abandoned, terminated, or modified pursuant to the terms and conditions of this instrument or of any applicable Federal law or regulation.

d. This instrument ☑ may ☐ may not be renewed. If renewed, the right-of-way or permit shall be subject to the regulations existing at the time of renewal and any other terms and conditions that the authorized officer deems necessary to protect the public interest.

e. Notwithstanding the expiration of this instrument or any renewal thereof, early relinquishment, abandoment, or termination, the provisions of this instrument, to the extent applicable, shall continue in effect and shall be binding on the holder, its successors, or assigns, until they have fully satisfied the obligations and/or liabilities accruing herein before or on account of the expiration, or prior termination, of the grant.

(Continued on page 2)

3. Rental:

For and in consideration of the rights granted, the holder agrees to pay the Bureau of Land Management fair market value rental as determined by the authorized officer unless specifically exempted from such payment by regulation. Provided, however, that the rental may be adjusted by the authorized officer, whenever necessary, to reflect changes in the fair market rental value as determined by the application of sound business management principles, and so far as practicable and feasible, in accordance with comparable commercial practices.

4. Terms and Conditions:

a. This grant or permit is issued subject to the holder's compliance with all applicable regulations contained in Title 43 Code of Federal Regulations parts 2800 and 2880.

b. Upon grant termination by the authorized officer, all improvements shall be removed from the public lands within **180** days, or otherwise disposed of as provided in paragraph (4)(d) or as directed by the authorized officer.

c. Each grant issued pursuant to the authority of paragraph (1)(a) for a term of 20 years or more shall, at a minimum, be reviewed by the authorized officer at the end of the 20th year and at regular intervals thereafter not to exceed 10 years. Provided, however, that a right-of-way or permit granted herein may be reviewed at any time deemed necessary by the authorized officer.

d. The stipulations, plans, maps, or designs set forth in Exhibit(s) **A and B**, dated **06/23/2021**, attached hereto, are incorporated into and made a part of this grant instrument as fully and effectively as if they were set forth herein in their entirety.

e. Failure of the holder to comply with applicable law or any provision of this right-of-way grant or permit shall constitute grounds for suspension or termination thereof.

f. The holder shall perform all operations in a good and workmanlike manner so as to ensure protection of the environment and the health and safety of the public.

IN WITNESS WHEREOF, The undersigned agrees to the terms and conditions of this right-of-way grant or permit.

1. This grant is issued subject to the holder's compliance with all applicable regulations contained in Title 43 Code of Federal Regulations part 2800.

2. Any archaeological or historical artifacts or remains, or vertebrate fossils discovered during construction, maintenance and use shall be left intact and undisturbed; all work in the area shall stop immediately and the Authorized Officer shall be notified immediately. Commencement of operations shall be allowed upon clearance by the Authorized Officer.

3. An additional cultural and paleontological resource survey may be required in the event that the project location is changed, or additional surface disturbing operations are added to the project after the initial survey. Any such survey would have to be completed prior to commencement of operations.

4. If in connection with operations under this authorization, any human remains, funerary objects, sacred objects of cultural patrimony as defined in the Native American Graves Protection and Repatriation Act (P.L. 101-601; Stat. 3048; U.S.C. 3001) are discovered, the permittee shall stop operations in the immediate area of the discovery, protect the remains and objects, and immediately notify the Authorized Officer of the discovery. The permittee shall continue to protect the immediate area of the discovery until notified by the Authorized Officer that operations may resume.

5. The proponent and any contractors will need to thoroughly power wash and remove all vegetative material and soil before transporting equipment to the construction site to minimize the threat of spreading noxious and invasive weeds. This includes trucks, trailers, and all other machinery. The contractor, in concert with the BLM, will be responsible for weed control on disturbed areas within the limits of the Right-of-Way or construction site. The proponent and contractor will be responsible for consultation with the Authorized Officer and local authorities for implementing acceptable weed treatment methods. Any use of chemical treatments requires the submission of a Pesticide Use Proposal (PUP) to the ROW Specialist, and approval by the BLM Pesticide Use Coordinator. The applications will abide by all safety and application guidelines as listed on the produce label and Material Safety Data Sheet (MSDS). Any reclamation efforts requiring seeding will need to be done with certified, weed-free native seed. Contact BLM for approved sources of native seed, certified testing and mixtures. All herbicidal treatments must comply with: Record of Decision, Vegetation Treatments Using Herbicides on BLM Lands in 17 Western States, EIS, 2007, Herbicide Active Ingredients Approved for Use; Record of Decision, Vegetation Treatments Using Aminopyralid, Fluroxypyr, and Rimsulfuron on BLM Lands in 17 Western States, 2016.

6. Upon grant termination by the Authorized Officer, all improvements shall be removed from the public lands within 180 days, or otherwise disposed of as provided by the authorized officer.

7. All operations shall be performed in a good and workmanlike manner so as to ensure protection of the environment and the health and safety of the public.

8. All activities directly or indirectly associated with construction, operation and maintenance shall be conducted within the limits of the approved right-of-way. This right-of-way does not allow for any surface disturbing activities outside the right-of-way area.

9. The holder(s) shall comply with all applicable Federal laws and regulations existing or hereafter enacted or promulgated. In any event, the holder(s) shall comply with the Toxic Substances Control Act of 1976, as amended (15 U.S.C. 2601, et.seq.) with regard to any toxic substances that are used, generated by or stored on the right-of-way or on facilities authorized under this right-of-way grant. (See 40 CFR, Part 702-799 and especially, provisions on polychlorinated biphenyls, 40 CFR 761.1-761.193.) Additionally, any release of toxic substances (leaks, spills, etc.) in excess of the reportable quantity established by 40 CFR, Part 117 shall be reported as required by the Comprehensive Environmental Response, Compensation and Liability Act of 1980, Section 102b. A copy of any report required or requested by any Federal agency or State government as a result of a reportable release or spill of any toxic substances shall be furnished to the Authorized Officer concurrent with the filing of the reports to the involved Federal agency or State government.

10. The holder shall notify the Authorized Officer prior to commencement of emergency maintenance outside the right-of-way to discuss repair and construction activities, since the authorization is within the boundaries of the Tanner Wash Area of Critical Environmental Concern (ACEC).

11. No construction or routine maintenance activities shall be performed during periods when the soil is too wet to adequately support construction equipment. If such equipment creates ruts in excess of 4 inches deep, the soil shall be deemed too wet to adequately support construction equipment.

12. The holder must amend the right-of-way grant at any time additional land, equipment, and/or new uses are proposed which are beyond the scope of the existing authorization.

13. At least 60 days prior to termination of the right-of-way, the holder shall contact the Authorized Officer to arrange a joint inspection of the right-of-way. This inspection will be held to agree to an acceptable termination (and rehabilitation) plan. This plan shall include, but is not limited to, removal of facilities, drainage structures, or surface material, recontouring, top soiling, or seeding. The Authorized Officer must approve the plan in writing prior to the holder's commencement of any termination activities.

14. The holder shall notify the Authorized Officer of any address change that occurs during the term of the right-of-way.

15. Any changes to the authorization require prior written approval from the Authorized Officer.

SECTION 3.

Questions	Yes	No	Explanation:
1. To your knowledge, is there any information that exists which indicates that the water in this well has been, may be or is contaminated?		X	IF YES, EXPLAIN (Attach additional page if nesessary)
2. Is there another well name or identification number associated with this well? (e.g., MW-1, PZ-4, Lot 29 Well, Smith Well, etc.)	X		IF YES, PLEASE STATE Geronimo B
3. Prior to abandonment, did the well have 20' of surface casing and 20' of grout in the annular space surrounding the casing?		X	If no, was the top 20' of casing removed prior to setting the cement plug? ☒ Yes ☐ No
4. Was the well backfilled above the cement plug?		X	
5. Was the well casing video logged?		X	
6. Why was the well abandoned? Poor Performance

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: APS FAP (Cholla)

Job ID: 550-165381-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H1	Sample analysis performed past holding time.
H3	Sample was received and/ or analysis requested past holding time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-165381-1

Narrative

Job Narrative
550-165381-1

Comments
No additional comments.

Receipt
The samples were received on 6/14/2021 2:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.8º C.

Receipt Exceptions
The Chain-of-Custody (COC) was incomplete as received and/or improperly completed.

Please verify project used to complete login.
Client did not list analytes needed for 300 and metals needed 200.7 and 200.8.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The continuing calibration blank (CCB) for analytical batch 550-245649 contained Sodium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.7 Rev 4.4: The following sample was diluted to bring the concentration of target analytes within the calibration range: CH-DEV-W126R-0621 (550-165381-1). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2320B: Reanalysis of the following samples were performed outside of the 14 day analytical holding time for Alkalinity by method SM 2320B due to an instrument failure that occurred during the initial run; CH-DEV-W126R-0621 (550-165381-1) and CH-DEV-W123R-0621 (550-165381-2). The initial analysis occurred within holding time although an instrument failure occurred interrupting the analytical run, therefore the initial run had no usable data. Reanalysis occurred promptly although the holding time had already been exceeded. As such, the data has been reported and qualified with H1 flags.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Sample Summary

Client: Arizona Public Service Company
Project/Site: APS FAP (Cholla)

Job ID: 550-165381-1

550-165381 Chain of Custody

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification
Unconfirmed

Login Number: 165381
List Number: 1
Creator: Gravlin, Andrea

List Source: Eurofins TestAmerica, Phoenix

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	No analysis requiring residual chlorine check assigned.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-165540-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-165540-1

Comments
No additional comments.

Receipt
The samples were received on 6/16/2021 12:50 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.9º C.

HPLC/IC
Method 300.0: The following sample was diluted for FLuoride due to the nature of the sample matrix: (550-165264-J-17 ^50). An elevated reporting limit (RL) has been provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Sample Summary

Accreditation/Certification Summary

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Metals

Qualifier	Qualifier Description
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 550-166242-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-166242-1

Comments
No additional comments.

Receipt
The samples were received on 6/30/2021 1:30 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.8º C.

Receipt Exceptions
The Chain-of-Custody (COC) was incomplete as received and/or improperly completed.

COC does not list 200.7 metals needed.
Logged in 200.7 method, metals will need to be adjusted.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Sample Summary

Client: Arizona Public Service Company
Project/Site: Cholla Replacement Well Aquifer Test

Job ID: 550-166242-1
SDG: APS Cholla Power Plant (FAP)

Lab Sample ID	Client Sample ID	Matrix	Collected	Received	Asset ID
550-166242-1	CH-CRT-GSX1R-0621	Water	06/28/21 17:43	06/30/21 13:30	
550-166242-2	CH-CRT2-GSX1R-0621	Water	06/29/21 04:36	06/30/21 13:30

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	Refer to Job Narrative for details.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-168312-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-168312-1

Comments
No additional comments.

Receipt
The samples were received on 8/4/2021 10:54 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.4º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The following sample was diluted to bring the concentration of target analytes within the calibration range: CH-CCR-GSX1R-0821 (550-168312-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method SM 5310B: An incorrect volume of spiking solution was inadvertently added to the continuing calibration verification (CCV) samples associated with 550-251294 for Total Organic Carbon (TOC). Percent recoveries were based on the amount spiked and fell within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Sample Summary

Client: Arizona Public Service Company

Accreditation/Certification Summary

Client: Arizona Public Service Company
Job ID: 550-168312-1
Project/Site: CCR Replacement Well Sampling
SDG: APS Cholla Power Plant (FAP)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Other:

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification
Unconfirmed

Deliverable Requested: I, II, III, IV, Other (specify) Primary Deliverable Rank: 2

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

Creator: Gravlin, Andrea

List Source: Eurofins TestAmerica, Phoenix

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Table of Contents

Definitions/Glossary

Qualifiers

Metals

Qualifier	Qualifier Description
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Arizona Public Service Company
Project/Site: APS - Cholla CCR

Job ID: 550-156601-1
SDG: 1420182040.6048.06

Job ID: 550-156601-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-156601-1

Comments
No additional comments.

Receipt
The samples were received on 1/18/2021 3:55 PM; the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.0º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification
Unconfirmed

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* ______ *Months*

Deliverable Requested: I, II, III, IV, Other (specify) Primary Deliverable Rank: 2

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

ANALYTICAL REPORT

Eurofins TestAmerica, Phoenix
4625 East Cotton Ctr Blvd
Suite 189
Phoenix, AZ 85040
Tel: (602)437-3340

Laboratory Job ID: 550-162159-1
Client Project/Site: CCR Groundwater Monitoring

For:
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Attn: Natalie Chrisman

Authorized for release by:
4/27/2021 3:56:43 PM

Ken Baker, Project Manager II
(602)659-7624
Ken.Baker@Eurofinset.com

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-162159-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Metals

Qualifier	Qualifier Description
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job Narrative
550-162159-1

Comments
No additional comments.

Receipt
The samples were received on 4/19/2021 10:41 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 2.7º C and 5.6º C.

HPLC/IC
Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: CH-CCR-M59-0421 (550-162159-2). Elevated reporting limits (RLs) have been provided.

Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: (550-162152-E-42 ^200). As such, an elevated reporting limit (RL) has been provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Table of Contents

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-166821-1
SDG: APS Cholla Power Plant (BAM)

Qualifiers

General Chemistry

Qualifier	Qualifier Description
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-166821-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-166821-1

Comments
No additional comments.

Receipt
The sample was received on 7/9/2021 4:50 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.4º C.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Environment Testing America

ANALYTICAL REPORT

Eurofins TestAmerica, Phoenix
4625 East Cotton Ctr Blvd
Suite 189
Phoenix, AZ 85040
Tel: (602)437-3340

Laboratory Job ID: 550-173427-1
Laboratory SDG: APS Cholla Power Plant (BAM)
Client Project/Site: CCR Groundwater Monitoring

For:
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Attn: Natalie Chrisman

Authorized for release by:
11/12/2021 7:27:09 AM

Ken Baker, Project Manager II
(602)659-7624
Ken.Baker@Eurofinset.com

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-173427-1
SDG: APS Cholla Power Plant (BAM)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H3	Sample was received and/ or analysis requested past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-173427-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-173427-1

Comments
No additional comments.

Receipt
The samples were received on 11/1/2021 3:45 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.6º C.

Receipt Exceptions
The following samples were received outside of holding time:

TDS was received past hold.

CH-CCR-M54-1021 (550-173427-1), CH-CCR-M59-1021 (550-173427-2), CH-CCR-M60-1021 (550-173427-3) and CH-CCR-FD01-1021 (550-173427-5).

HPLC/IC
Method 300.0: An incorrect volume of spiking solution was inadvertently added to the laboratory control sample and laboratory control sample duplicate (LCS/LCSD), associated with analytical batch 550-258214 by method EPA 300.0. The LCS/LCSD percent recoveries were calculated using the actual amount spiked which achieved results within the acceptance range.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company — Job ID: 550-173427-1
Project/Site: CCR Groundwater Monitoring — SDG: APS Cholla Power Plant (BAM)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature

Method Summary

Method	Method Description	Protocol	Laboratory
300.0	Anions, Ion Chromatography	MCAWW	TAL PHX
200.7 Rev 4.4	Metals (ICP)	40CFR136A	TAL PHX
SM 2540C	Solids, Total Dissolved (TDS)	SM	TAL PHX
SM 4500 H+ B	pH	SM	TAL PHX

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-174639-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-174639-1

Comments
No additional comments.

Receipt
The samples were received on 11/20/2021 10:16 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.4º C.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

550-174639 Chain of Custody

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other ______ 1 4 1 1

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☑ Disposal by Lab ☐ Archive for ______ Months

Special Instructions/QC Requirements & Comments:

Method 200.8 with collision cell

1.4°

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.:		Cooler Temp. (°C): Obs'd: ______ Corr'd: ______ Therm ID No.: ______

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

ANALYTICAL REPORT

Eurofins TestAmerica, Phoenix
4625 East Cotton Ctr Blvd
Suite 189
Phoenix, AZ 85040
Tel: (602)437-3340

Laboratory Job ID: 550-174639-2
Laboratory SDG: APS Cholla Power Plant (BAM)
Client Project/Site: CCR Groundwater Monitoring

For:
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Attn: Natalie Chrisman

Authorized for release by:
12/13/2021 4:10:22 PM

Rachel Sester, Project Manager I
(602)659-7615
Rachel.Sester@Eurofinset.com

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-174639-2
SDG: APS Cholla Power Plant (BAM)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-174639-2

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-174639-2

Comments
No additional comments.

Receipt
The samples were received on 11/20/2021 10:16 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.4º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Other:

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Login Sample Receipt Checklist

Client: Arizona Public Service Company

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Metals

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H1	Sample analysis performed past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
550-162158-1

Comments
No additional comments.

Receipt
The samples were received on 4/19/2021 10:41 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.2º C.

HPLC/IC
Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: (550-162159-A-2 ^100). Elevated reporting limits (RLs) have been provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The continuing calibration verification (CCV) associated with batch 550-240090 recovered above the upper control limit for Beryllium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 200.8 LL: The continuing calibration blank (CCB) for analytical batch 550-241021 contained Thallium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.8 LL: The laboratory control sample (LCS) associated with preparation batch 550-240803 and analytical batch 550-241021 was outside acceptance criteria for Barium. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

Method 200.8 LL: The following samples were diluted due to the nature of the sample matrix: CH-CCR-M56-0421 (550-162158-1), CH-CCR-M57-0421 (550-162158-2), CH-CCR-M58-0421 (550-162158-3), CH-CCR-M62-0421 (550-162158-4) and CH-CCR-FD02-0421 (550-162158-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2540C: Reanalysis for Total Dissolved Solids (TDS) on the following sample was performed outside of the analytical holding time due to yielding excessive residue in the first analysis;CH-CCR-FD02-0421 (550-162158-5). The sample produced excessive residue during the first analysis in an amount that exceeded the method limit of 0.2000 g. Therefore, the laboratory performed reanalysis using a smaller sample aliquot, which occurred after the 7 day analytical holding time. The reanalysis yielded a residue amount that conformed to the method requirement, as such, the reanalysis result has been reported and qualified with an H1 flag.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Sample Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-162158-1

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-162158-1

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-08-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Table of Contents

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Replacement Well Sampling

Job ID: 550-168310-1
SDG: APS Cholla Power Plant (SEDI)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-168310-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-168310-1

Comments
No additional comments.

Receipt
The samples were received on 8/4/2021 10:54 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Job ID: 550-168310-1

Project/Site: CCR Replacement Well Sampling
SDG: APS Cholla Power Plant (SEDI)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H3	Sample was received and/ or analysis requested past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-173423-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-173423-1

Comments
This Revised report contains the correct sampling time for CH-CCR-FD02-1021, CH-CCR-CR1R-1021, CH-CCR-CR1R-1021-MS, CH-CCR-CR1R-1021-MSD.

Receipt
The samples were received on 11/1/2021 3:48 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.8º C.

Receipt Exceptions
The container label for the following sample did not match the information listed on the Chain-of-Custody (COC): CH-CCR-CR1R-1021 (550-173423-1). The container labels list sample time 16:24, while the COC lists sample time 16:53. The client was contacted, and the lab was instructed to use 16:53 as the sample time as the container labels had the correct information.

The following samples were received outside of holding time:

TDS was received past hold.

CH-CCR-CR1R-1021 (550-173423-1), CH-CCR-M56-1021 (550-173423-2), CH-CCR-M57-1021 (550-173423-3), CH-CCR-M58-1021 (550-173423-4), CH-CCR-M62-1021 (550-173423-5) and CH-CCR-FD02-1021 (550-173423-6).

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.8 LL: The laboratory control sample (LCS) associated with preparation batch 550-257696 and analytical batch 550-258420 was outside acceptance criteria for Barium. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Sample Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Accreditation/Certification Summary

Client: Arizona Public Service Company — Job ID: 550-173423-1
Project/Site: CCR Groundwater Monitoring — SDG: APS Cholla Power Plant (SEDI)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Custody Seals Intact: Δ Yes Δ No	Custody Seal No.: 1754782		Cooler Temperature(s) °C and Other Remarks: 0.6 IRM CF +/-0		

Ver: 06/08/2021

Login Sample Receipt Checklist

Client: Arizona Public Service Company

Job Number: 550-173423-1
SDG Number: APS Cholla Power Plant (SEDI)

Login Number: 173423
List Number: 1
Creator: Gravlin, Andrea

List Source: Eurofins TestAmerica, Phoenix

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	
Samples are received within Holding Time (excluding tests with immediate HTs)	False	Refer to Job Narrative for details.
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
N1	See case narrative.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-162152-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative

Comments
No additional comments.

Receipt
The samples were received on 4/19/2021 10:41 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 3.0º C, 4.0º C, 5.3º C, 6.3º C and 6.4º C.

Receipt Exceptions
Associated sample coolers received out of temp for the samples listed:

CH-CCR-M52-0421 (550-162152-1), CH-CCR-M52-0421 (550-162152-2), CH-CCR-M55-0421 (550-162152-5), CH-CCR-M55-0421 (550-162152-6), CH-CCR-M69-0421 (550-162152-7), CH-CCR-M69-0421 (550-162152-8), CH-CCR-M70-0421 (550-162152-9), CH-CCR-M70-0421 (550-162152-10), CH-CCR-W304-0421 (550-162152-17), CH-CCR-W304-0421 (550-162152-18), CH-CCR-W305-0421 (550-162152-19), CH-CCR-W305-0421 (550-162152-20), CH-CCR-W306-0421 (550-162152-23), CH-CCR-W306-0421 (550-162152-24), CH-CCR-W307-0421 (550-162152-25), CH-CCR-W307-0421 (550-162152-26), CH-CCR-W308-0421 (550-162152-27), CH-CCR-W308-0421 (550-162152-28), CH-CCR-W309-0421 (550-162152-29) and CH-CCR-W309-0421 (550-162152-30)

HPLC/IC
Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: (550-162157-E-5 ^200). This analyte was not detected in the diluted sample. As such, an elevated reporting limit (RL) has been provided.

Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: CH-CCR-W305-0421 (550-162152-19). This analyte was not detected in the diluted sample. As such, an elevated reporting limit (RL) has been provided.

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 550-240269 were outside control limits for Chloride and Sulfate. Sample matrix interference was suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: (550-162157-E-1 ^200). As such, an elevated reporting limit (RL) has been provided.

Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: CH-CCR-FD04-0421 (550-162152-42). As such, an elevated reporting limit (RL) has been provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 200.7 Rev 4.4: The following sample was diluted to bring the concentration of target analytes within the calibration range: CH-CCR-BAP-0421 (550-162152-34). Elevated reporting limits (RLs) are provided.

Method 200.7: A deviation from the Standard Operating Procedure (SOP) occurred. Details are as follows: Due to insufficient sample volume the sample was prepared at half volume (25mL). Method:200.7 Tot Prep Batch:534428

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method SM 5310B: The results for the source sample corresponding with the matrix spike / matrix spike duplicate (MS/MSD) associated with analytical batch 550-240618 for Total Organic Carbon (TOC) by method SM 5310B did not meet the method quality control

Job ID: 550-162152-1 (Continued)

Laboratory: Eurofins TestAmerica, Phoenix (Continued)

requirements for reporting. The consecutive injections exceeded the relative percent difference requirement of 10; therefore, no results could not be reported and reanalysis was required. The results for the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) met acceptance criteria and may be used to verify batch accuracy and precision data. As such, the following sample results have been reported and qualified with N1 flags.

CH-CCR-M69-0421 (550-162152-7) and CH-CCR-W304-0421 (550-162152-17)

Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 550-241040 were outside control limits for Dissolved Organic Carbon (DOC). Sample matrix interference was suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-162152-1
SDG: APS Cholla Power Plant (BAP)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-08-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	200.7/200.7_P_TOT Total Lithium	Total Number of containers	Special Instructions/Note:
			Preservation Code						
CH-CCR-BAPTD-0421 (550-162152-36)	4/17/21	11:45 Arizona		Water			X	1	AZ Sample
CH-CCR-Petroglyph-0421 (550-162152-38)	4/16/21	16:10 Arizona		Water			X	1	AZ Sample
CH-CCR-TanWash-0421 (550-162152-40)	4/16/21	15:35 Arizona		Water			X	1	AZ Sample
CH-CCR-FD04-0421 (550-162152-42)	4/17/21	11:45 Arizona		Water			X	1	AZ Sample

Preservation Codes:

A - HCL	M - Hexane
B - NaOH	N - None
C - Zn Acetate	O - AsNaO2
D - Nitric Acid	P - Na2O4S
E - NaHSO4	Q - Na2SO3
F - MeOH	R - Na2S2O3
G - Amchlor	S - H2SO4
H - Ascorbic Acid	T - TSP Dodecahydrate
I - Ice	U - Acetone
J - DI Water	V - MCAA
K - EDTA	W - pH 4-5
L - EDA	Z - other (specify)

Other:

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification

Unconfirmed

Deliverable Requested: I, II, III, IV, Other (specify) — Primary Deliverable Rank: 2

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ *Return To Client* ☐ *Disposal By Lab* ☐ *Archive For* ______ *Months*

Special Instructions/QC Requirements:

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Table of Contents

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.

Metals

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H6	The filtration was not done within the required 15 minutes of sampling, the sample was filtered in the laboratory.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit

1 2 3 4 5 6 7 8 9 10 11 12 13 14

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-164785-1

Comments
No additional comments.

Receipt
The samples were received on 6/3/2021 11:03 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.9º C and 2.1º C.

Receipt Exceptions
Client used the wrong sample container needed for the dissolved metals-lab to filter method.
Split sample volume from the unpreserved 500 ml container to use for the dissolved metals.

Pop up note in the project requests that MS/MSD be added for this client, client did not provide sample volume for this request.

CH-CCR-P226A-0621 (550-164785-1), CH-CCR-P226A-0621 (550-164785-2), CH-CCR-P226B-0621 (550-164785-3), CH-CCR-P226B-0621 (550-164785-4), CH-CCR-P226C-0621 (550-164785-5), CH-CCR-P226C-0621 (550-164785-6), CH-CCR-P226D-0621 (550-164785-7), CH-CCR-P226D-0621 (550-164785-8), CH-CCR-P226E-0621 (550-164785-9), CH-CCR-P226E-0621 (550-164785-10), CH-CCR-P226G-0621 (550-164785-11), CH-CCR-P226G-0621 (550-164785-12), CH-CCR-P226H-0621 (550-164785-13) and CH-CCR-P226H-0621 (550-164785-14)

HPLC/IC
Method 300.0: The following sample was diluted for Fluoride due to the nature of the sample matrix: CH-CCR-P226A-0621 (550-164785-1). An elevated reporting limit (RL) has been provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method Filtration: The following samples requested dissolved metals and were not filtered in the field: CH-CCR-P226A-0621 (550-164785-2), CH-CCR-P226B-0621 (550-164785-4), CH-CCR-P226C-0621 (550-164785-6), CH-CCR-P226D-0621 (550-164785-8), CH-CCR-P226E-0621 (550-164785-10), CH-CCR-P226G-0621 (550-164785-12) and CH-CCR-P226H-0621 (550-164785-14). These samples were filtered and preserved upon receipt to the laboratory.

Method 200.7 Rev 4.4: The continuing calibration verification (CCV) associated with batch 550-244594 recovered above the upper control limit for Beryllium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 200.7 Rev 4.4: The method blank for preparation batch 550-244391 and 550-244493 and analytical batch 550-244738 contained Manganese above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for 550-244965 were outside control limits for Total Organic Carbon (TOC). Sample matrix interference was suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-164785-1
SDG: APS Cholla Power Plant (BAP)

Laboratory: Eurofins TestAmerica, Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-21

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 2320B		Water	Alkalinity, Phenolphthalein
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins TestAmerica, Denver

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑Non-Hazard ☐Flammable ☐Skin Irritant ☐Poison B ☐Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐Return to Client ☑Disposal by Lab ☐Archive for ______ Months

Special Instructions/QC Requirements & Comments:

*Perform Method 200.8 with collision cell; * As marked on the bottle; please filter in lab and perform dissolved analyses with sample provided in bottles marked 'to be filtered'.*

Note: Since laboratory accreditations are subject to change, Eurofins TestAmerica places the ownership of method, analyte & accreditation compliance upon out subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins TestAmerica laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins TestAmerica attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said complicance to Eurofins TestAmerica.

Possible Hazard Identification
Unconfirmed

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	Refer to Job Narrative for details.
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
N1	See case narrative.

Metals

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the blank.
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
H3	Sample was received and/ or analysis requested past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
N1	See case narrative.
R13	MS/MSD RPD exceeded the method acceptance limit. Matrix spike recovery was outside acceptance criteria. Batch precision and accuracy were demonstrated.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-173411-1

Laboratory: Eurofins TestAmerica, Phoenix

Narrative

Job Narrative
550-173411-1

Revision
This report was revised on 11/26/21 to correct the sampling time of the following samples to 15:47: CH-CCR-M55-1021 (550-173411-5), CH-CCR-M55-1021 (550-173411-6). This final report replaces the report that was generated on 11/17/21 at 8:56 AM.

Comments
No additional comments.

Receipt
The samples were received on 11/1/2021 3:48 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.2º C, 1.3º C, 1.4º C, 2.4º C and 2.9º C.

Receipt Exceptions
The following sample(s) was received outside of holding time:

Client sampled from 10/21/21 to 10/31/21.
Some of the TDS samples were received past hold.

HPLC/IC
Method 300.0: The results for the source sample and the matrix spike / matrix spike duplicate (MS/MSD) associated with analytical batch 550-257638 for Fluoride by method EPA 300.0 could not be reported due to the analyte concentration in the diluted sample exceeding the low end of the instrument calibration range. As such, reanalysis at a lower dilution was required and no results could be reported for the associated source sample. The results for the batch laboratory control sample / laboratory sample control duplicate (LCS/LCSD) met method acceptance criteria and may be used to verify accuracy and precision. Therefore, the following sample results have been reported

Job ID: 550-173411-1 (Continued)

Laboratory: Eurofins TestAmerica, Phoenix (Continued)

and qualified with a N1 flag.

CH-CCR-W305-1021 (550-173411-35) and CH-CCR-W306-1021 (550-173411-37)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 200.7 Rev 4.4: The continuing calibration blank (CCB) for analytical batch 550-257737 contained Sodium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

Method 200.7 Rev 4.4: The method blank for preparation batch 550-257482 and analytical batch 550-257737 contained Sodium above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method 200.7 Rev 4.4: The following sample was diluted due to the nature of the sample matrix: CH-CCR-M72-1021 (550-173411-14). Elevated reporting limits (RLs) are provided.

Method 200.7 Rev 4.4: The following samples were diluted to bring the concentration of target analytes within the calibration range: CH-CCR-BAP-1021 (550-173411-51), CH-CCR-BAPTD-1021 (550-173411-53), CH-CCR-Petroglyph-1021 (550-173411-55), CH-CCR-TanWash-1021 (550-173411-57), CH-CCR-TWX3-1021 (550-173411-59), CH-CCR-TWX4-1021 (550-173411-61), CH-CCR-TWX5-1021 (550-173411-63), CH-CCR-TWX6-1021 (550-173411-65), CH-CCR-TWX7-1021 (550-173411-67), CH-CCR-TWX8-1021 (550-173411-69), CH-CCR-TWX9-1021 (550-173411-71) and CH-CCR-TWX10-1021 (550-173411-73). Elevated reporting limits (RLs) are provided.

Method 200.7 Rev 4.4: The method blank for preparation batch 550-257482 and analytical batch 550-257837 contained Boron above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method 200.7 Rev 4.4: The following sample was diluted due to the nature of the sample matrix: CH-CCR-M72-1021 (550-173411-13). Elevated reporting limits (RLs) are provided.

Method 200.7 Rev 4.4: The following sample was diluted to bring the concentration of target analytes within the calibration range: CH-CCR-M72-1021 (550-173411-13). Elevated reporting limits (RLs) are provided.

Method 200.8 LL: Chromium was detected above the reporting limit (RL) in the method blank associated with preparation batch 550-257496 and analytical batch 550-258493 as well as in the following samples: CH-CCR-FD04-1021 (550-173411-49) and CH-CCR-TWX6-1021 (550-173411-65). All affected samples cannot be re-digested due to not enough sample remaining. Both sets of data have been reported.

Method 200.7: A deviation from the Standard Operating Procedure (SOP) occurred. Details are as follows: due to insufficient sample, the samples were prepared at half volume. Method:200.7 Prep Batch: 556271

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Method SM 5310B: The matrix spike (MS) recovery for analytical batch 550-258332 was outside control limits for Dissolved Organic Carbon (DOC). Sample matrix interference was suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 550-258332 were outside control limits for Dissolved Organic Carbon (DOC). Sample matrix interference and/or non-homogeneity were suspected because

Job ID: 550-173411-1 (Continued)

Laboratory: Eurofins TestAmerica, Phoenix (Continued)

the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) recoveries and precision were within acceptance limits.

Method SM 5310B: The matrix spike duplicate (MSD) recovery for analytical batch 550-258432 was outside control limits for Dissolved Organic Carbon (DOC). Sample matrix interference was suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method SM 5310B: The results for Total Organic Carbon (TOC) by method SM 5310B for the following sample did not meet the method requirement for consecutive injections to have a relative percent difference (RPD) of at least 10 due to matrix interferences; CH-CCR-Petroglyph-1021 (550-173411-55) . The sample was analyzed two times with similar results. The result reported had the lowest RPD value between consecutive injections (RPD 14) which was slightly over the method limit. As such, the data has been reported and qualified with an N1 flag.

Method SM 5310B: The method blank for analytical batch 550-258432 contained Dissolved Organic Carbon (DOC) above the method detection limit (MDL). This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

Method SM 5310B: The method blank for analytical batch 550-258433 contained Total Organic Carbon (TOC) above the method detection limit (MDL). This target analyte concentration was less than the reporting limit (RL); therefore, re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-173411-1
SDG: APS Cholla Power Plant (BAP)

Client Sample ID: CH-CCR-W303-1021 (Continued) — Lab Sample ID: 550-173411-31

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Arsenic	0.0018	D1	0.0010	0.00049	mg/L	2		200.8 LL	Total/NA
Barium	0.0034	D1	0.0010	0.00052	mg/L	2		200.8 LL	Total/NA
Cadmium	0.00061	D1	0.00020	0.000046	mg/L	2		200.8 LL	Total/NA
Chromium	0.010	D1	0.0020	0.00087	mg/L	2		200.8 LL	Total/NA
Cobalt	0.022	D1	0.0010	0.00013	mg/L	2		200.8 LL	Total/NA
Molybdenum	0.059	D1	0.0010	0.00040	mg/L	2		200.8 LL	Total/NA
Selenium	0.0027	D1	0.0010	0.00015	mg/L	2		200.8 LL	Total/NA
Thallium	0.000026	D1 E4	0.00020	0.000026	mg/L	2		200.8 LL	Total/NA
Ammonia	0.040	E4	0.050	0.039	mg/L	1		350.1	Total/NA
