1 INTRODUCTION

This Annual Groundwater Monitoring and Corrective Action Report for 2023 (Annual Report) was prepared on behalf of Arizona Public Service Company (APS) by WSP USA Environment & Infrastructure (WSP) for the Cholla Power Plant (Cholla or the Site) located in Navajo County, Arizona. The Annual Report summarizes groundwater monitoring and corrective action data collected to support compliance with coal combustion residuals (CCR) groundwater monitoring and corrective action requirements detailed in 40 Code of Federal Regulations (CFR) Part 257 (herein referred to as the CCR Rule) (Federal Register, 2020).

The CCR Rule became effective on October 19, 2015 and established standards for the disposal of CCR in landfills and surface impoundments (CCR units). In particular, the CCR Rule set forth groundwater monitoring and corrective action requirements for CCR units. The CCR Rule includes the requirement that an “annual groundwater monitoring and corrective action report” be prepared by January 31 for the preceding calendar year (the reporting period). This Annual Report prepared for the 2023 calendar year is intended to document the status of the groundwater monitoring and corrective action programs for each CCR unit, summarize key actions completed, and forecast key activities for 2024. APS additionally considers this report to meet the semiannual reporting requirement of 40 CFR section (§)257.97(a) for selecting and designing remedies pursuant to the CCR Rule during the last half of 2023.

The remainder of Section 1 provides a summary description of the power generating facility, the active CCR units present at the facility, the closed CCR units, the facility’s environmental setting which form the basis for assessment of underlying groundwater conditions, and overview of the CCR groundwater monitoring system. Section 2 presents key groundwater monitoring and corrective action activities performed during the reporting period. Sections 3 and summarize in further detail the activities performed for the groundwater monitoring and corrective action programs respectively during the reporting period. Key activities identified for the upcoming year are presented in Section.

1.1 SITE BACKGROUND

1.1.1 FACILITY AND CCR UNIT DESCRIPTION

Facility Description. Cholla is a coal-fired power plant that had two electric generating units (Units 1 and 3) in operation during 2023. Units 1 and 3 with a combined nameplate capacity of 425.9 megawatts are owned and operated by APS. Unit 2 was retired in October of 2015 and Unit 4 was retired in December 2020. Coal burned at the plant was previously sourced from the McKinley Mine in New Mexico. When the McKinley Mine closed in 2009, the source of coal switched to the Lee Ranch and El Segundo mines near Grants, New Mexico.

Facility Location. The plant and associated infrastructure are located on land owned/leased by APS adjacent to Interstate 40 (I-40) between the City of Winslow and the City of Holbrook in Navajo County, Arizona (**Figure 1-1**). The plant sits next to Cholla Reservoir, a cooling pond for Unit 1 and water storage reservoir for the plant that was originally constructed in the early 1900s by the Joseph City Irrigation Company (Shilling, 2005) and was configured in its current location and design by APS in 1961. Cholla Reservoir receives deliveries of groundwater pumped from the nearby Cholla production well field (south of the plant) extracting from the Coconino Sandstone Aquifer. The typical water surface elevation of Cholla Reservoir is 5,022 feet (ft) above mean sea level (amsl).

Active CCR Unit Description. Plant infrastructure includes three single CCR units that are currently receiving CCR and are referred to as the Fly Ash Pond (FAP), Bottom Ash Pond (BAP), and Bottom Ash Monofill (BAM). All the CCR units are located north of I-40 (**Figure 1-2**). The FAP and BAP dams were completed in 1978, and the BAM came into operation in the late 1990s. **Table 1-1** summarizes the location, function, operation, size/construction, and history of each unit. The boundaries of CCR units depicted in **Figure 1-2** are based on available historical plans for the units.

Closed CCR Unit Description. The Sedimentation Pond (SEDI) was a single CCR unit formerly located in the plant area, south of I-40 (**Figure 1-2**) that was placed into service in 1976 and ceased receiving CCR in October 2020. Demolition and excavation of the SEDI was complete in October 2021.

The SEDI was delisted as a CCR unit following the achievement of clean closure in October 2022 (WSP, 2023a). As of October 2022, samples are no longer required to be collected at the former SEDI background and downgradient boundary wells (M-56A, M-57A, M-58A, and M-62A) to support compliance with CCR groundwater monitoring and corrective action requirements.

1.1.2 ENVIRONMENTAL SETTING

Unless otherwise noted, the following information is abstracted from Montgomery & Associates (2011), Montgomery & Associates (2017), and AMEC Environment & Infrastructure, Inc. (2012).

Climate. The plant is located in an arid climate within the Little Colorado River Basin. The area receives an average of 6 to 12 inches of precipitation annually. The evaporation rate exceeds the rate of precipitation by an order of magnitude.

Topography. Cholla is located at an average elevation of approximately 5,025 ft amsl in the Colorado Plateau physiographic province of northeastern Arizona. The area is characterized by canyons, high elevations, and narrow, widely spaced riverbeds. The topography of the plant area is characterized by rolling terrain, open vistas, and incised drainages/arroyos. In the vicinity of the plant, the ground surface gently slopes towards the Little Colorado River to the south at approximately 60 ft per mile; however, surface drainage immediately near Cholla Reservoir flows towards the reservoir. About two miles north and south of the plant, the ground surface rises out of the alluvial floodplain to an elevation of 5,100 to 5,200 ft amsl.

Surface Water Hydrology. The plant is located north of the Little Colorado River within the Middle Little Colorado watershed. The Little Colorado River is a meandering, perennial stream with intermittent reaches in a large alluvial floodplain. Tanner Wash is an ephemeral stream that flows adjacent to the BAP and BAM and discharges into the Little Colorado River to the west of the plant site.

Site Geology. The Colorado Plateau, on which the plant is located, is typified by horizontal layered sequences of sedimentary rock, primarily sandstones, siltstones, and claystones. At the plant and nearby CCR units, the uppermost geologic units that are expected to influence groundwater flow and contribute to variations in naturally occurring constituent concentrations across the Site are as follows (in descending order):

- **Little Colorado River, Tanner Wash, and other wash Alluviums:** The quaternary surface alluviums overlie bedrock formations in localized areas at Cholla and surrounding CCR units. The alluviums are unconsolidated, heterogeneous, and consist of clay, silt, sand, and gravel. In general, the Tanner Wash Alluvium (near the BAP) and other wash Alluvium (mostly under the FAP) are finer grained than the Little Colorado River Alluvium. The alluviums range in thickness from non-existent to approximately 200 ft, and in general are thickest underneath the plant and Cholla Reservoir. In the vicinity of the CCR units, the alluviums range from approximately 50 ft thick in the vicinity of the FAP Dam to 100 ft thick in the vicinity of the southern BAP Dam.
- **Moenkopi Formation:** The Moenkopi Formation is the uppermost geologic unit beneath the plant and CCR units and is present at land surface in areas where the alluvium is non-existent. The thickness of the Moenkopi Formation near the plant ranges from non-existent to over 300 ft. Where it is sufficiently thick, the Moenkopi Formation acts as an aquitard between the shallow alluvial aquifer and the underlying Coconino Sandstone Aquifer. The Moenkopi Formation consists of three members, described below:
 - **Holbrook Member:** the unit is a relatively permeable, well-consolidated sandstone. The Holbrook Member is the uppermost member of the Moenkopi Formation and is not generally present in the subsurface in the vicinity of the plant.
 - **Moqui Member:** the unit is the primary confining unit within the Moenkopi Formation and consists of maroon and greenish mudstone with abundant gypsum. The Moqui Member is up to approximately 250 to 300 ft thick near the plant.

- **Wupatki Member:** the unit is the lowest member of the Moenkopi Formation and is approximately 30 to 50 ft thick. The Wupatki Formation is comprised of relatively permeable sandstone and is in hydraulic connection with the underlying Coconino Sandstone.
- **Coconino Sandstone:** The Permian-age Coconino Sandstone is the principal lithologic unit of the C-aquifer, a regionally important aquifer for water supply. It is composed of very fine- to fine-grained sandstone with variable permeability depending on the degree of fracturing and cementation. The unit is approximately 375 to 400 ft thick in the vicinity of the plant.
- **Schnebly Hill Formation:** The Schnebly Hill Formation is a very fine-grained, reddish sandstone that is about 300 to 350 ft thick near the plant. It is part of the C-aquifer, but its hydraulic conductivity is about 10 to 28 percent that of the Coconino Sandstone.
- **Supai Formation:** The Pennsylvanian to Lower Permian Supai Formation underlies the Coconino Sandstone. It has minimal impact on the surface operations of Cholla, other than containing an approximately 600 ft thick deposit of halite and anhydrite in the Cholla well field area that impacts groundwater quality both regionally and in the vicinity of the plant.

Applicable Hydrostratigraphy. Two relevant hydrostratigraphic units are conceptualized beneath the plant and associated CCR units. The units form the basis for the hydrogeologic Conceptual Site Model (CSM) developed by Montgomery & Associates (2011) and (2017) for the purpose of evaluating compliance wells for the CCR Groundwater Monitoring System.

The first hydrogeologic unit, the Alluvial Aquifer (consisting of the Little Colorado River, Tanner Wash, and other wash alluviums), is present beneath the plant area, Cholla Reservoir, and the Tanner Wash and Little Colorado River drainage channels adjacent to the BAP and FAP, respectively. The alluvial aquifer in the area receives recharge from the Little Colorado River, Tanner Wash, other contributing drainage channels and any leakage through anthropogenic features such as the reservoir and the nearby Joseph City Canal. The alluvial aquifer is not used as a drinking water supply but does support a riparian habitat along natural surface water channels. Depth to water in the alluvial aquifer ranges from several feet to several tens of feet below land surface in the Cholla area, varying spatially based on proximity to recharge sources and topography, and seasonally based on rainfall-runoff patterns. Where present, groundwater flows generally in the downstream direction of the drainages under which it is present, that is, east to west in the Little Colorado River Alluvium and north to south in the Tanner Wash Alluvium. Groundwater flow in the Little Colorado River alluvium is also influenced by deeper paleochannels that may not coincide with the present river channel.

The second hydrogeologic unit is the C-aquifer, which consists of the Coconino Sandstone and Schnebly Hill Formation in the vicinity of the plant. Groundwater in the C-aquifer is present under confined to semi-confined conditions in areas north of the Little Colorado River where the Moqui member of the Moenkopi Formation (Moqui) acts as a confining bed. Groundwater movement in the C-aquifer is generally to the north. However, until recently, pumping from the Cholla production well field (south and west of the plant) created a cone of depression that influenced the localized groundwater flow in the area. Groundwater pumping rates from the production well field have significantly declined since shutdown of electrical generating Unit 2 in 2015 and Unit 4 in 2020 and a corresponding increase in the piezometric surface of the C-aquifer has been observed. Near the FAP, the inferred flow of groundwater in the C-aquifer is to the west or northwest, possibly due to the broad, northwest-trending anticline that extends from the vicinity of the FAP to near Joseph City.

In areas where the C-aquifer in the Coconino Sandstone is confined (generally north of the Little Colorado River), the Moqui aquitard limits hydraulic connection between the alluvial aquifer and the C-aquifer and is effectively bedrock when considering water quality conditions and groundwater movement in a significant portion of the alluvial aquifer. However, connections between the C-aquifer and the alluvial aquifer are becoming better understood as the C-aquifer recovers from long-term production well pumping associated with plant operations. Recent water level monitoring indicates a regional increase in groundwater elevations in the alluvial aquifer that appears to be related to upwelling of groundwater from the C-aquifer in areas where the Moqui is not present or insufficiently thick.

Additional evidence that hydraulic interactions between the relevant hydrostratigraphic units and the Moqui are complex includes the results of investigations which indicate localized saturation occurs in the uppermost layer of the Moqui downgradient of the BAP and FAP. These lenses of saturation in the Moqui occur principally at the base of historical drainage channels where the unit is weathered or where penetrations from piezometer or

monitoring well installation activities have fractured the mudstone of the Moqui and allowed overlying alluvial groundwater to infiltrate into the unit (WSP, 2023b).

Uppermost Aquifer by CCR Unit. The CCR Rule requires that the uppermost aquifer underlying each CCR unit be monitored to evaluate potential impacts from the unit. At Cholla, the uppermost aquifer by unit is as follows:

- **FAP (other wash and Little Colorado River Alluvium):** The FAP was constructed by damming an ephemeral surface water channel with a limited watershed that previously discharged to the Little Colorado River floodplain. The surface impoundment is primarily underlain by the relatively impermeable Moqui member of the Moenkopi Formation; however, a relatively thin layer of alluvial sediments underlie the FAP (particularly in the vicinity of the dam) and is in communication with alluvium downgradient of the FAP. The FAP dam has a clay core that extends through the alluvium to Moqui bedrock where the alluvium was less than 20 ft thick at the time of dam construction. In the middle of the dam where the alluvium was greater than 20 ft thick, a cutoff wall was constructed that generally extended approximately one to two feet into bedrock. Groundwater at the toe of the FAP dam flows west-southwest primarily through shallow alluvial sediments (which are fairly fine grained) and then merges with the Little Colorado River Alluvium where the predominant direction of groundwater flow is to the west. Localized saturation also occurs in the weathered, uppermost portion of the Moqui near the FAP dam and downgradient of the FAP, near the Hunt seep.
- **BAP (Tanner Wash Alluvium):** The BAP is located in an ephemeral surface water channel that formerly discharged into Tanner Wash. The northern and western abutments of the BAP dam are constructed on the Moenkopi Formation, whereas the length of the southern portion of the dam is constructed predominantly on alluvial material. The BAP dams have a clay core that extend through the alluvium to bedrock where the alluvium was less than 20 ft thick at the time of dam construction. In regions where the alluvium was greater than 20 ft thick, a cutoff wall was constructed that generally extended to bedrock. However, due to the depths involved, the cutoff wall does not extend to bedrock in the middle of the channel underlying the southern dam. There is an approximately 30 to 40-ft thick layer of alluvium below the base of the cutoff wall in that region (at an elevation of 4,980 ft amsl). Groundwater near the BAP flows south-southwest primarily through the Tanner Wash Alluvium to its confluence with the Little Colorado River Alluvium. Near the southern BAP dam, groundwater flows within a localized region of the weathered, uppermost portion of the Moqui.
- **BAM (Coconino Sandstone):** The BAM is a CCR landfill constructed in the Tanner Wash watershed. It is constructed on the Moqui member of the Moenkopi Formation where no saturated alluvium is present; water levels from nearby wells indicate that the Moenkopi is unsaturated beneath the BAM. Therefore, the uppermost hydrogeologic unit at the BAM is the Coconino Sandstone Aquifer which exists under confined conditions more than 300 ft below ground surface (bgs) in the vicinity of the BAM. Groundwater in the Coconino Aquifer beneath the BAM flows to the north-northwest.

1.2 CCR GROUNDWATER MONITORING SYSTEM

Multiple monitoring well systems are in place at Cholla to monitor groundwater conditions beneath the three Site CCR units and support ongoing detection or assessment of impacts from potential leakage. **Table 1-2** identifies each well with associated CCR unit information, the date of well installation, and well construction details. **Figure 1-2** presents a map of the well locations.

Installation of the networks is summarized in the *Cholla Power Plant Coal Combustion Residuals Program – Design, Installation, and Evaluation of Completeness of Groundwater Monitoring Networks* (CCR Groundwater Monitoring System Certification Report; Montgomery & Associates, 2017 as well as an update to the report prepared during the 2022 reporting period; WSP, 2023c). Per the CCR Rule, site monitoring systems are required to evaluate groundwater quality that is representative of background (i.e., groundwater that has not been affected by leakage from a CCR unit) and groundwater passing the downgradient boundary of each CCR unit in the uppermost water-bearing hydrostratigraphic unit underlying the CCR unit.

In addition to the CCR groundwater monitoring system wells, there are many non-CCR supplementary monitoring wells and extraction wells at the Site that are not part of the CCR groundwater monitoring systems but may provide useful information to the program. The extraction wells were installed to support the seepage collection

systems at the FAP and BAP as part of interim response measures. Some extraction wells are inactive in terms of extraction operations but the well can be monitored to assess groundwater conditions. **Table 1-2** and **Figure 1-2** identify the supplemental and extraction wells.

1.2.1 MONITORING SYSTEM DESCRIPTION

1.2.1.1 BACKGROUND GROUNDWATER MONITORING WELLS.

Background groundwater quality at the Site can be established by a single monitoring well or a group of monitoring wells. If a group of monitoring wells is used, the wells should be screened within the same lithologic unit, exhibit similar groundwater chemistry, illustrate similar statistical merits, and be supported by the CSM. The grouping and adequacy of background wells identified for Cholla to assess background water quality is adequate based on the current understanding of the geological and hydrostratigraphic conditions.

Per the CCR Groundwater Monitoring System Certification Report (Montgomery & Associates, 2017; WSP, 2023c), the following monitoring wells are designated as “background monitoring wells” for the respective geologic and hydrostratigraphic conditions underlying Cholla:

- **Background Wells for the FAP and the BAP (Little Colorado River, Tanner Wash, and other wash Alluvium):** The upgradient boundary of the FAP rests on a thick section of the Moenkopi Formation; there is no saturated alluvium present in the area upgradient from the FAP boundary. Therefore, background well M-64A was installed west of the plant in the Little Colorado River floodplain to serve as a background well for the FAP. Hydrogeologic conditions at the BAP also prevented installation of an upgradient background well, similar to the FAP; therefore, M-64A also serves as the background well for the BAP. Notably, the BAP, in the Tanner Wash alluvium, discharges to and is hydraulically connected to the Little Colorado River alluvium. Travel time calculations performed for the initial CCR Groundwater Monitoring System Certification Report (Montgomery & Associates, 2017) indicated that M-64A is located far enough downgradient from the FAP and the BAP to represent unimpacted groundwater; however, the location of the background well is not ideal and has the potential to promote spatial heterogeneity issues in statistical data analysis.
- **Background Wells for the BAM (Coconino Sandstone):** The groundwater flow direction in the Coconino Sandstone Aquifer in the vicinity of the BAM is to the north-northwest. Background well M-54 is installed in the Coconino Sandstone on the southeast (upgradient) side of the BAM.

Due to the natural heterogeneity of the geologic and hydrogeologic conditions underlying Cholla, background constituent concentrations are expected to be spatially heterogeneous (varying) across the Site. The Site is also expected to exhibit both spatial and temporal heterogeneity attributable to local climatic regimes, potential leakage from surface water recharge sources, and potential operational activity at the Site. The groundwater monitoring well networks, respective to sampling coverage and frequency, appear to adequately represent the spatial and temporal heterogeneity, pending further review.

1.2.1.2 DOWNGRADIENT CCR MONITORING WELLS.

Per the CCR Groundwater Monitoring System Certification Report (Montgomery & Associates, 2017; WSP, 2023c), a total of 22 CCR compliance wells are in place at the Site to monitor the downgradient groundwater conditions of each CCR unit (**Table 1-2**). Downgradient boundary wells assess for leakage from each CCR unit and the remaining downgradient wells evaluate the nature and extent of groundwater conditions associated with identified releases from CCR units. Fifteen of the monitoring wells are installed in either the Little Colorado River or Tanner Wash Alluvium. Four monitoring wells are screened in weathered portions of the Moqui either with or without some interception of overlying alluvium. The three remaining downgradient wells are completed in the Coconino Sandstone. The grouping of monitoring wells, spatial density, and coverage of the monitoring well network is adequate based on the current understanding of the geological and hydrostratigraphic conditions (**Figure 1-2**). The wells are grouped by their respective CCR unit, as described below:

- **FAP Downgradient Boundary and Downgradient Wells (Alluvium and Moenkopi Moqui):** The groundwater flow direction in the alluvium downgradient of the FAP dam (i.e., the waste boundary) is west-southwest. The alluvial thickness in that area is limited; in some places it may be up to 50 ft thick but in others it is non-existent. Three downgradient boundary wells were initially designated for the FAP boundary,

W-123, M-50A and M-51A. A cone penetrometer test investigation conducted downgradient of the FAP dam during 2020 suggests that the now-abandoned W-123 was substantially completed in the Moqui (Wood, 2021a). While drilling replacement well W-123R in May 2021, a highly weathered and saturated Moqui layer was encountered from 14.5 to 15.5 ft bgs at the top of the unit. To ensure that W-123R intercepts the alluvial aquifer and the saturated Moqui and that it complies with Arizona Department of Water Resources (ADWR) surface completion requirements, the well was constructed with a screened interval of 8 to 18 ft bgs (Wood, 2022a). In 2018, three additional wells were installed to evaluate the nature and extent of groundwater conditions downgradient of the FAP. The wells are identified as MW-65A, MW-66A, and MW-67A.

- **BAP Downgradient Boundary and Downgradient Wells (Tanner Wash Alluvium and Moenkopi Moqui):** The groundwater flow direction in the alluvium underlying the BAP is generally to the southwest along Tanner Wash; however, there is a radial component of groundwater flow toward the east-southeast due to hydraulic head from the BAP. As of the end of the reporting period, nine downgradient boundary monitoring wells are designated for the BAP: M-52A, M-53A, MW-71A, MW-72M, MW-73A, MW-74M, W-305, W-306, and W-314. Monitoring wells M-53A, W-305, W-306, and W-314 are screened in the Tanner Wash Alluvium based on the available well log information. A drilling investigation conducted in 2019 indicated that M-52A may partially be completed in the weathered upper portion of the Moqui (Wood, 2020a). MW-71A, MW-72M, MW-73A, and MW-74M were installed in 2021 as part of BAP pre-design studies and added as downgradient boundary wells in the updated *CCR Groundwater Monitoring System Certification Report* (WSP, 2023c). Four additional downgradient monitoring wells (MW-76A, MW-77A, MW-78A, and MW-79A) were installed as part of the BAP pre-design studies and are designated to evaluate the nature and extent of groundwater conditions downgradient of the BAP. The identifications for some monitoring wells include an “A” or “M.” The identifications ending with “A” designations are screened in the Tanner Wash Alluvium and those ending with “M” designations are screened in the locally saturated upper layer of the Moqui (WSP, 2023c).
- **BAM Downgradient Boundary Wells (Coconino Sandstone):** The uppermost hydrogeologic unit underlying the BAM is the C-aquifer in the Coconino Sandstone, which flows towards the north-northwest in that vicinity. Three downgradient boundary monitoring wells were installed to monitor the quality of groundwater passing the waste boundary of the BAM. The wells are named M-59, M-60, and M-61, and are completed in the Coconino Sandstone.

1.2.2 IMPLEMENTED CHANGES TO MONITORING SYSTEM

No changes to the current monitoring system occurred during the reporting period.

2 SUMMARY OF KEY ACTIONS COMPLETED

A summary of key actions conducted at the Site in 2023 to address CCR Rule requirements is as follows:

- *Documentation of Groundwater Monitoring Activities Conducted in 2022* – 40 CFR §257.90(e) requires that an Annual Groundwater Monitoring and Corrective Action Report for applicable sites be prepared for existing CCR units annually on January 31 of the following year. During the reporting period, the *Annual Groundwater Monitoring and Corrective Action Report for 2022* was prepared (WSP, 2023a), placed in the facility’s operating record, and posted to APS’s CCR information webpage in accordance with 40 CFR §257.105(h)(1) and 40 CFR §257.106(h)(1).
- *Continuation of the Detection Monitoring Program at the BAM* – 40 CFR §257.94(b) requires the continuation of detection monitoring at a semi-annual frequency for Appendix III constituents at CCR units where statistical analysis of Appendix III constituent data do not indicate a statistically significant increase (SSI) over background. Section 3.2 summarizes detection monitoring activities conducted during the reporting period.
- *Statistical Analyses of Appendix III Constituents at the BAM* – For CCR units in the detection monitoring program, 40 CFR §257.93(h) requires the evaluation of Appendix III data for constituents in groundwater for SSIs over background no later than 90 days after completing the associated sampling and analysis. During the reporting period, two statistical analyses were performed using updated analytical data for Appendix III constituents at BAM monitoring wells. The statistical analyses are summarized in Section 3.3.1.
- *Preparation of a Semi-Annual Progress Report on Remedy Selection for the FAP and the BAP* – 40 CFR §257.97(a) requires the preparation of semi-annual reports which document the progress of remedy selection for CCR units that have impacted groundwater. During July of the 2023 reporting period, the ninth semi-annual report was prepared to fulfill the requirement (Section 4.6).
- *Characterization of the Nature and Extent of Releases from the FAP and the BAP* – 40 CFR §257.95(g)(1) requires characterization of the nature and extent of releases from CCR units where one or more Appendix IV constituents exceed GWPSs at statistically significant levels (SSLs). Section 4.2 summarizes characterization activities performed during the reporting period to address the requirement.
- *Interim Response Measures at the FAP* – Interim response measures performed at the FAP during the reporting period consisted of completion of documentation of the expansion of the FAP seepage collection system and troubleshooting of the system. Interim response measures at the FAP performed during the reporting period are further detailed in Section 4.5.2.
- *BAP Pre-design Studies Necessary to Support Remedy Selection* – Aquifer testing was performed at wells located downgradient of the BAP in June 2023 to support BAP pre-design studies. A technical memorandum that summarizes an evaluation of the aquifer tests was prepared in January 2024. The BAP pre-design studies are further explained in Section 4.4.1.

3 GROUNDWATER MONITORING PROGRAM

The groundwater monitoring and corrective action process defined in the CCR Rule includes a phased approach to groundwater monitoring, leading (if applicable) to the establishment of GWPSs for each CCR unit. Exceedances of the GWPSs that are determined to be statistically significant can trigger requirements for additional groundwater characterization and corrective action assessment followed by implementation of a corrective action program.

The first phase of groundwater monitoring is the detection monitoring phase. Detection monitoring focuses on a set of CCR constituents (listed in Appendix III of the CCR Rule) that are more mobile and generally present at higher concentrations. These attributes can contribute to making the constituents readily quantified and early indicators of a potential release from a CCR unit to groundwater. If SSIs are detected for Appendix III constituents over established background levels, otherwise known as background threshold values (BTVs), in downgradient boundary wells and cannot be demonstrated to be associated with a source other than the CCR unit, then groundwater monitoring moves into the second phase, assessment monitoring. **Table 3-1** summarizes the Appendix III constituent BTVs established for Site CCR units.

The second phase of groundwater monitoring focuses on the constituents listed in Appendix IV of the CCR Rule. The Appendix IV constituents generally are less mobile and typically occur at lower concentrations in groundwater than the Appendix III constituents. Concentrations of Appendix IV constituents in downgradient boundary wells are compared to established GWPSs. The GWPSs, established for Appendix IV constituents only, are the higher of either the federal Safe Drinking Water Act Maximum Contaminant Level (MCL), alternative human health risk-based GWPSs established in the CCR Rule, or the background concentration for each constituent. **Table 3-1** summarizes the Appendix IV constituent GWPSs established for Site CCR units.

If exceedances of the GWPSs are determined to occur in downgradient boundary wells at SSLs and no alternative sources for the exceedances can be demonstrated, then both additional groundwater characterization and assessment of corrective measures are initiated. Following assessment of corrective measures, a remedy (or set of remedial activities) is selected and implemented as the groundwater corrective action program for the CCR unit. According to the CCR Rule, groundwater corrective action will continue until compliance with the GWPSs has been attained in all impacted wells and sustained for a period of three consecutive years.

3.1 PROGRAM STATUS

Based on available Appendix III concentrations and statistical analyses completed as of the end of the 2023 reporting period for the BAM, the unit is currently in the detection groundwater monitoring program. The FAP and BAP are in corrective action and continue to be monitored as part of the assessment groundwater monitoring program.

Summaries of groundwater monitoring program activities performed during the reporting period are presented in the following sections.

3.1.1 PROBLEMS ENCOUNTERED AND RESOLUTIONS TO PROBLEMS

Problems encountered during the reporting period and associated resolutions include:

- During the May 2023 monitoring event, Eurofins TestAmerica Laboratories, Inc. (Eurofins) was unable to meet the required reporting limit (RL) of less than (<) 1 mg/L for many of the fluoride analyses performed using United States Environmental Protection Agency (USEPA) drinking water Method 300.0. Although the laboratory had achieved the acceptable RLs in the past during the analysis of samples collected from wells in the Four Corners CCR monitoring program, the laboratory refused to analyze the samples collected during the May 2023 event without performing multiple dilutions due to elevated total

dissolved solids and sulfate concentrations in these samples which can adversely affect laboratory equipment. APS and WSP were notified that the fluoride RLS would be elevated, and it was requested that Eurofins report fluoride to the method detection limit (MDL) to achieve the lowest level of detection. The MDLs ranged from less than 2 to less than 80 mg/L and Eurofins was unable to re-analyze the samples without the dilutions. After the May 2023 monitoring event, project requirements were discussed with Eurofins and they agreed to target RLS based upon the previous level of dilutions achieved on a sample by sample basis. Additionally, Eurofins proposed USEPA solid waste Method 9056A as an alternative ion chromatography method to USEPA drinking water Method 300.0, that would allow for less sample dilution and lower reporting limits, more like those achieved in the past. In response, a small subset of samples was submitted to be analyzed for fluoride by Method 9056A during the November 2023 monitoring event to compare the methods. A split sampling analysis presenting the sampling methods, analytical results, and overall findings will be presented in a technical memorandum to be completed in 2024.

3.1.2 GROUNDWATER MONITORING PROGRAM TRANSITIONS

No CCR unit monitoring program transitions occurred during the reporting period.

3.1.3 ALTERNATIVE SOURCE DEMONSTRATIONS

No Alternative Source Demonstrations (ASDs) or further updates to existing ASDs were performed during the reporting period.

3.2 MONITORING DATA COLLECTED

One resampling and two semi-annual CCR groundwater monitoring events were conducted at Cholla during the reporting period in accordance with the Site Sampling and Analysis Plan (SAP) (Wood, 2022b). The SAP documents the methods and procedures used to conduct groundwater sampling, analyze collected samples for CCR constituents, and assess associated analytical data for quality assurance purposes.

The resampling event took place in January 2023 as part of a 1 of 2 resampling strategy implemented at MW-60 following the identification of an initial exceedance for sulfate in October 2022 (further discussed in Section 3.3.1). The first semi-annual groundwater monitoring event took place in April through May 2023 and the second semi-annual monitoring event took place in October through November 2023. The following sections summarize results of the monitoring activities conducted in 2023. **Table 3-2** identifies when monitoring occurred, and which units were monitored. During the reporting period, detection monitoring included evaluation of collected samples for Appendix III constituents on a semi-annual basis (40 CFR §257.94[b]). At a minimum, assessment monitoring included evaluation of collected samples for all Appendix IV constituents on an annual basis (40 CFR §257.95[b]) and detected Appendix IV constituents and all Appendix III constituents on a semi-annual basis (40 CFR §257.95[d][1]).

Supplementary water samples collected during the reporting period included surface water samples collected from the BAP and FAP units.

3.2.1 WATER LEVEL MONITORING

Figure 3-1 presents a potentiometric surface map created using water-level measurements collected in April, during the April/May 2023 groundwater monitoring event. **Figure 3-2** presents a potentiometric surface map created using water-level measurements collected in October during the October/November groundwater monitoring event. Groundwater elevations collected from monitoring wells at each CCR unit are evaluated and plotted independently based on the CSM. The estimated flow directions inferred from the groundwater elevation data are depicted on the figures. As indicated, groundwater in the alluvium appears to flow south to southwest from the FAP and to the south through Tanner Wash from the BAP, towards the Little Colorado River, where

groundwater generally flows to the west (consistent with surface water flows). Groundwater in the C-aquifer underlying the BAM flows to the north.

Appendix A presents hydrographs of groundwater elevations measured at CCR compliance wells over time. The groundwater elevations measured during the reporting period are relatively stable and consistent with historical observations. In general, seasonal fluctuations are apparent from the water-level data, with higher water levels occurring in the spring (e.g., March through May) and lower water levels occurring in late-summer through fall (e.g., August through October).

Notable observations for groundwater conditions at each CCR unit are discussed below.

FAP: A fairly steep hydraulic gradient exists at the outer edges of the FAP dam where no cutoff wall is present. The hydraulic gradient appears slightly steeper at the left abutment versus the right abutment. Farther downgradient, groundwater elevations in M-46A, MW-67A, and MW-63A indicate that the hydraulic gradient begins to flatten with increased distance from the FAP. Well W-127 was noted to be dry in April and October 2023 (the well is typically dry) and suggests a limited saturated thickness of the alluvial aquifer to the southwest of the FAP. Closer to the Little Colorado River, supplementary well M-49A has regularly been dry in recent years; however, a small amount of water (less than 0.4 ft and so insufficient for collecting a sample) was detected in the well during both 2023 semi-annual sampling events. The presence of water in M-49A may be attributed to a regional increase in alluvial aquifer levels associated with a decrease in Cholla production well pumping and a resultant upwelling of groundwater from the C-aquifer in areas where the Moqui is thin or not present.

BAP: Groundwater elevations at M-53A (located at the western abutment of the southern BAP dam) and W-314 (located downgradient of the eastern side of the BAP dam) are approximately 10 ft higher than groundwater elevations in wells located towards the central portion of the southern BAP dam (i.e. M-52A, W-305, and W-306), indicating a steep hydraulic gradient exists at the toe the BAP dam. CCR compliance well MW-76A, installed to delineate impacts downgradient of the BAP, was dry upon drilling and installation in May 2021 and is still noted to be dry during the 2023 semi-annual sampling events.

BAM: Groundwater elevations in the C-aquifer monitoring wells continue to exhibit seasonal fluctuations with the higher elevation measured in spring and indicate a slightly increasing trend over time.

3.2.2 GROUNDWATER FLOW RATE ESTIMATION

The CCR Rule requires that groundwater flow rates beneath CCR units be estimated during each monitoring event. The water levels measured in April and October 2023 (**Figures 3-1** and **3-2**) were used to calculate the direction and magnitude of the hydraulic gradient in the vicinity of each unit using a spreadsheet tool available on the United States Environmental Protection Agency (USEPA) website (USEPA, 2014). Darcy's Equation for flow through porous media was then used with Site data (where available) and/or literature-based hydraulic conductivity and effective porosity values for hydrogeologic units to estimate average linear groundwater flow velocities. The effective porosity value (0.26) is calculated from the specific yield ranges reported by Morris and Johnson for the alluvium-Moqui hydrostatic units (Morris and Johnson, 1967). **Table 3-3** identifies the wells, hydraulic conductivities, and porosities used in the analysis and presents the calculated groundwater flow directions, gradients, and flow velocities.

FAP: The hydraulic gradient and flow direction downgradient of the FAP in the alluvial aquifer were relatively stable (0.019 and 0.018 ft/ft for the April and October events, respectively). The direction of groundwater flow was to the southwest towards the Little Colorado River (240 and 236 degrees from north for April and October 2023, respectively). The corresponding groundwater flow rates for the monitoring events were 0.29 and 0.28 ft per day (ft/d) for April and October 2023, respectively.

BAP: The hydraulic gradient downgradient of the BAP in the Tanner Wash Alluvium was stable during the reporting period at 0.015 and 0.014 ft per ft (ft/ft) for the April and October events, respectively. The direction of groundwater flow from the BAP was south (188 degrees from north for each event) and the corresponding groundwater flow rates for the April and October events were 0.060 and 0.050 ft/d, respectively.

BAM: The hydraulic gradient and flow direction underlying the BAM in the C-Aquifer, were fairly stable during the reporting period. The magnitude of the hydraulic gradient for April and October was 0.0091 and 0.0090 ft/ft,

respectively. The direction of groundwater flow for April and October 2023 was to the north (360 to 359 degrees from north, respectively). The corresponding groundwater flow rate for April and October 2023 was 1.1 ft/d.

3.2.3 SAMPLE COLLECTION

Groundwater samples were collected, labeled, preserved, and shipped per the SAP (Wood, 2022b). In accordance with 40 CFR §257.93(i), which requires the measurement of total recoverable metals, groundwater samples collected for statistical analysis of Appendix III and IV constituents were not field filtered prior to analysis. Pursuant to the SAP, quality control samples (i.e., field duplicates, field blanks and extra sample volume for matrix spike samples) were collected during each groundwater monitoring event. The samples are noted on associated chain-of-custody documentation.

3.2.4 SAMPLE ANALYSIS AND DATA VALIDATION

Groundwater samples were submitted to Eurofins TestAmerica Laboratories, Inc. (Eurofins) and Radiation Safety Engineering, Inc. (Radiation Safety) located in Phoenix, Arizona for analysis. Eurofins evaluated samples for all constituents excluding radium. Radiation Safety performed the radium analyses. Both Eurofins and Radiation Safety are Arizona Department of Health Services-licensed laboratories (AZ0728 and AZ0462, respectively). **Appendix B** presents the associated Laboratory Reports of Analysis organized by CCR unit.

Table 3-2 identifies the analytes evaluated during each monitoring event and field investigation. Analytes varied based on the monitoring program (i.e., detection vs. assessment monitoring) or field investigation. The SAP identifies Appendix III and Appendix IV constituents with associated analytical methods. As discussed in Section 3.1.1, a subset of samples was submitted for fluoride analysis by EPA Method 9056A during the November 2023 monitoring event.

Following receipt of final laboratory reports of analysis, the reports and associated sample data collected during detection and assessment monitoring were evaluated for quality assurance purposes. The scope of the review was a USEPA Stage 2A validation. **Appendix C** presents the *2023 Data Validation Report* which documents the reviews. One analytical result, the nitrate-nitrite result for FAP supplementary well W-126R in the April event, was deemed unusable in 2023 due to a low matrix spike recovery resulting in a biased low result. All data qualifiers and reason codes are included in the *2023 Data Validation Report (Appendix C)*.

3.2.5 SAMPLE RESULTS

Appendix D presents the groundwater sampling results for 2023 along with historical groundwater quality data for the Site. The groundwater quality data collected during the reporting period are discussed further in Section 4.2.

3.3 STATISTICAL ANALYSIS OF MONITORING DATA

Statistical analyses of Appendix III constituent data were conducted during the reporting period to evaluate whether collected monitoring data indicate Site CCR units have adversely impacted underlying groundwater. The analyses were conducted in accordance with the Statistical Data Analysis Work Plan (WSP, 2023d).

3.3.1 EVALUATION OF APPENDIX III CONSTITUENT DATA

The BAM was the only Site CCR unit that remained in the detection monitoring program as of the beginning of 2023 and required statistical evaluations of Appendix III constituent data during the reporting period.

A statistical analysis of Appendix III constituent data collected at the BAM through January 2023 was completed in April 2023 (**Appendix E**). An initial exceedance of sulfate in October 2022 was detected at CCR well MW-60. In

accordance with the Statistical Data Analysis Work Plan (SDAWP) developed for the Site (WSP, 2023d), APS implemented a 1 of 2 resampling strategy and resampling was conducted in January 2023 to address the exceedance. The resampling detection result for sulfate in January 2023 was detected at the associated BTV, and therefore the initial exceedance was determined statistically insignificant. The statistical analysis indicated no SSIs over Appendix III constituent BTVs.

A statistical analysis of Appendix III constituent data collected at the BAM through April 2023 was completed in October 2023 (**Appendix F**). The statistical analysis indicated no Appendix III constituents were detected at concentrations exceeding their respective BTVs during the April 2023 groundwater sampling event and there are currently no SSIs over Appendix III constituent BTVs.

As of the end of the 2023 reporting period APS continues detection monitoring at the BAM in accordance with 40 CFR §257.95(f).

3.3.2 EVALUATION OF APPENDIX IV CONSTITUENT DATA

No statistical evaluations of Appendix IV constituent data were conducted during the reporting period.

4 CORRECTIVE ACTION PROGRAM

4.1 PROGRAM STATUS

Based on the declaration that one or more Appendix IV constituents are present at SSLs above GWPSs downgradient of the FAP and the BAP, the FAP and BAP CCR units are currently in the corrective action program. Notification of exceedances occurred on November 14, 2018, and were documented in the Annual Groundwater Monitoring and Corrective Action Report for 2018 (Wood, 2019a).

Summaries of corrective action program activities performed during the reporting period are presented in the following sections.

4.2 CHARACTERIZATION OF POTENTIAL RELEASES FROM CCR UNITS

To characterize releases from CCR units, 40 CFR §257.95(g)(1) requires: (i) the installation of wells to define the extent of contaminant plumes, (ii) collection of data on the nature and estimated quantity of material released, (iii) installation of at least one well at the facility boundary in the direction of contaminant migration, and (iv) sampling of the wells to characterize the nature and extent of the release.

Initial efforts to address the requirements of 40 CFR §257.95(g)(1) were documented in the *Hydrogeologic Investigation of the Fly Ash Pond and Bottom Ash Pond* (Wood, 2020b). However, due to the duration required to adequately characterize complex groundwater impacts, work supporting characterization of potential releases from CCR units is ongoing. Activities conducted during the reporting period to address CCR Rule release characterization requirements downgradient of the FAP and BAP include:

- The collection of groundwater quality data from FAP and BAP monitoring wells (Section 3.2).
- Delineation of the nature and extent of releases from the FAP and BAP in the form of updated plume maps (**Figures 4-1** through **4-5**).

Findings from the characterization activities are summarized as follows:

- Contaminants of concern (COCs) present at concentrations above respective GWPSs in groundwater downgradient of the FAP include arsenic, fluoride, lithium, and molybdenum. The inferred extent of each constituent is depicted on **Figures 4-1, 4-2, 4-3, and 4-4** respectively. Arsenic, fluoride, lithium, and molybdenum all exceed the respective GWPSs in groundwater beneath downgradient off-site property and are defined by wells on APS property south of the FAP (MW-46A, MW-50A, MW-65A, MW-66A, and MW-67A). Surface water samples taken in October 2023 indicate that in addition to the four groundwater COCs (arsenic, fluoride, lithium, and molybdenum), pond water in the FAP also exhibits antimony, beryllium, cobalt, selenium, thallium, and total radium at concentrations exceeding GWPSs (as shown in **Appendix D**).
- Cobalt is present at concentrations above the GWPS in groundwater downgradient of the BAP, and is the only COC for the BAP. The inferred extent of cobalt is depicted on **Figure 4-5**. Cobalt currently exceeds the GWPS in offsite groundwater south and east of the BAP. The cobalt plume is delineated to the southern downgradient direction by MW-77A and MW-78A, and to the east by MW-74M. Samples collected in both April and October/November 2023 indicate the cobalt concentration in pond water of the BAP is below the GWPS and concentrations observed in groundwater (as shown in **Appendix D**), indicating the formation may be a natural source of cobalt to groundwater.

4.3 INTERIM RESPONSE MEASURES

While remedy selection progressed during the reporting period (Section 4.4), APS implemented several response measures at the FAP and the BAP to limit groundwater impacts. Data collected through the interim response measures are also used to inform an assessment of the effectiveness of potential remedial technologies. The interim response measures implemented during the reporting period are outlined in the *Risk Mitigation Plan* (Wood, 2020c) and summarized below.

- **Improvements to Seepage Intercept Collection Systems at the FAP** – The FAP Seepage Intercept Collection Systems were upgraded in 2022 and 2023 to allow the systems to capture seepage more effectively from the FAP before it discharges to groundwater. The FAP Seepage Intercept Collection System is comprised of the Hunt Seepage Collection System and the Geronimo Seepage Collection System which includes four extraction wells (EW-01 through EW-04) installed downgradient of the FAP in December 2020 (Wood, 2021c) and well GSX-1R installed in May 2021 (Wood, 2022a). System upgrades included: installing pump elapsed time meters; upgrading, replacing and increasing the number of flow meters on the system; plumbing the new wells with piping; installing pumps; and upgrading piping, electrical and instrument controls. Substantial completion of the project occurred from August through December 2022, and preliminary start-up of the upgraded system began at that time. All construction activities were completed, and the system was commissioned in January 2023. Record drawings and construction reporting were completed in 2023 and are included in **Appendix G**.
- **Improvements to Seepage Intercept Collection Systems at the BAP** – Improvements to the BAP Seepage Intercept Collection Systems to increase seepage capture were designed and procured in 2023. The current BAP Seepage Intercept Collection Systems include: wells TDX-3 through TDX-5 (identified as BSX-01 through BSX-03 in previous reporting documentation) installed in May 2021; seepage intercept trenches located at the Toe Drain System, Petroglyph Seep, and Tanner Wash sumps; and extraction wells located at the B-226/TWX area. Planned 2024 improvements include: installing pump elapsed time meters; upgrading, replacing and increasing the number of flow meters on the system; plumbing TDX-03 through TDX-05 and installing pumps; upgrading piping, electrical, and instrument controls; and installing a holding tank for connection to a future evaporation pond system south of the FAP (currently under construction).
- **Operation of FAP and BAP Seepage Intercept Collection Systems and Mass Removal Estimates** – The existing seepage intercept collection systems at the FAP and the BAP were maintained and operated throughout 2023. An estimated total mass removed of all Appendix IV constituents (minus radionuclides) was calculated for the operating systems for the past year. The estimated contaminant mass removed from discharges to groundwater by the systems in 2023 is based on the totalized annual flow extracted and average constituent concentrations measured at each system. There is currently flow metering equipment available to estimate flow rates at the BAP seepage collection systems (i.e., the Toe Drain System, Petroglyph Seep, Tanner Wash Seep and the TWX area wells) and at the FAP seepage collection systems (i.e., Geronimo and Hunt). Inconsistent totalizer readings at the TWX area wells prevented accurate annual flow estimations at these locations, and thus, total volume and mass removal at the BAP were calculated using data only from the Toe Drain, Petroglyph, and Tanner Wash Seepage Collection Systems. Additionally, the April/May 2023 fluoride concentrations measured at the BAP and FAP wells were not used in performing the fluoride mass calculation due to laboratory issues that resulted in elevated laboratory detection limits greater than the GWPS (see Section 3.1.1). Only the fluoride concentrations from the October 2023 sampling event were used for the mass removal calculation for fluoride. **Tables 4-1**, and **4-2** show the results of that calculation. The estimated combined total mass of Appendix IV constituents (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, fluoride, lead, lithium, mercury, molybdenum, selenium, and thallium) removed at the BAP and FAP was 5,643.7 pounds (lbs) and 358.9 lbs, respectively. A combined total of 6,002.5 lbs of Appendix IV constituents was removed in 2023. Fluoride represented 98% of the removed Appendix IV constituent mass during the year.

4.4 PROGRESS ON REMEDY SELECTION FOR THE FAP AND BAP

In response to GWPS exceedances at the FAP and the BAP and pursuant to 40 CFR §257.96(a), an Assessment of Corrective Measures (ACM) was prepared in 2019 (Wood, 2019b) to evaluate the performance of several combined corrective measures to address groundwater impacts resulting from the FAP and the BAP. Since completing the ACM, several evaluations and pre-design studies to support the selection and design of remedies for the FAP and the BAP have been conducted (Wood, 2020a and Wood, 2021b, WSP, 2023b, and **Appendix H**). This section presents an update on the status of these studies and progress on remedy selection.

4.4.1 CORRECTIVE MEASURES PRE-DESIGN STUDIES

The following are summaries of the evaluations and pre-design studies completed during the 2023 reporting period:

W-307R and M-52A Aquifer Testing Technical Memorandum - During the 2023 reporting period, aquifer testing was performed at W-307R and M-52A to address recommendations presented in the *Well Completion Report Bottom Ash Pond Pre-Design Studies* (WSP, 2023b). A technical memorandum was produced during the 2023 reporting period which documented the aquifer testing performed at W-307R and M-52A in June 2023 and the results of the analysis performed of the collected data acquired from both tests. The *W-307R and M-52A Aquifer Testing Technical Memorandum* is included as **Appendix H**.

Groundwater Model Update - The work to update to the existing numerical groundwater model for the Site to assist in the evaluation and selection of remedies for the FAP and BAP has begun but was not completed during the 2023 reporting period; The work is projected to be completed in 2024 as presented in Section 5.

Additional corrective measures pre-design studies planned for 2024 are discussed in Section 5.

4.4.2 REMEDY SELECTION REPORTS FOR THE FAP AND BAP

During the reporting period, APS further progressed selection of remedies for the FAP and the BAP that meet the requirements of 40 CFR §257.97(b) while considering the evaluation factors of 40 CFR § 257.97(c). Preparation of a remedy selection report began in 2023 and is planned to be completed in 2024.

4.5 IMPLEMENTATION OF RISK MITIGATION PLAN SUPPORTING ALTERNATIVE CLOSURE

On November 30, 2020, APS submitted a *Demonstration Supporting a Site-Specific Deadline to Initiate Closure for the FAP and the BAP* to the USEPA pursuant to 40 CFR §257.103(f)(2). The demonstration included a *Risk Mitigation Plan* (Wood, 2020c) that identified risk mitigation activities that were to be routinely documented in the GMCAR.

During the reporting period, weekly inspections of the FAP and BAP seepage collection systems were performed by APS personnel. At the time of the inspections, the area around the collection systems were also inspected for the presence of new seepage. During the annual dam inspections that occurred on November 13-14, 2023, the entire perimeter of the base of the FAP and BAP dams was inspected for indications of both new and previously observed seepage. No new seepage was identified. Weekly and annual inspections will continue in 2024.

Quarterly reviews of the online ADWR Wells 55 database were also completed to assess if groundwater production wells were installed in impacted aquifers downgradient of the FAP or the BAP. For the reporting period, ADWR Wells 55 database reviews occurred on January 5, May 16, August 18, and October 9. The quarterly reviews are

documented in **Appendix J**. No new well owner coordination was required during the reporting period. Quarterly reviews of the ADWR Wells 55 database will continue in 2024.

4.6 SEMI-ANNUAL PROGRESS REPORT ON REMEDY SELECTION FOR THE FAP AND BAP

40 CFR §257.97(a) requires the preparation of semi-annual reports which document the progress of remedy selection for CCR units that have potentially impacted groundwater until the remedy is selected. Accordingly, a semi-annual report was prepared on July 15, 2023 which describes the progress of remedy selection for the FAP and the BAP and is presented as **Appendix I**.

The Annual GMCAR for 2023 fulfills the requirements of 40 CFR §257.97(a) for a subsequent semi-annual progress report by providing updates on remedy selection (Section 4) and future planned activities (Section 5) for the FAP and BAP.

4.7 CCR UNIT CLOSURE ACTIVITIES

A demonstration supporting a Site-specific deadline to initiate closure per 40 CFR §257.103(f)(2) was submitted by APS to the USEPA on November 30, 2020. The USEPA assessed the submittal as complete on January 11, 2022, but had not made a determination regarding the demonstration as of December 31, 2023. APS placed an *Annual Progress Report Documenting the Continued Lack of Alternative Capacity and Progress Towards Closure of the FAP and BAP* (Annual Progress Report) (**Appendix K**) in the facility operating record on November 30, 2023. During the reporting period APS progressed CCR unit closure activities as outlined in the following sections.

4.7.1 BAP CLOSURE

During the reporting period, APS elected to modify the closure strategy for the BAP from closure in place to closure by removal. CCR will be excavated from the BAP and will be placed in the BAM. A conceptual design for closure of the BAP by removal is currently being developed and will be incorporated into an updated closure plan as soon as feasible.

4.7.2 FAP CLOSURE

The closure plan for the FAP (AECOM, 2020) states that the unit will be closed in place and capped with an evapotranspiration cover. Dewatering of the unit must occur prior to capping to safely construct the final cover system. During the reporting period, work was progressed to evaluate dewatering strategies so that the closure plan can be updated to address how dewatering will be accomplished. Closure activities highlighted in the Annual Progress Report (**Appendix K**) include:

- Minimization of discharges to the FAP with ongoing water level monitoring. The level of the FAP declined by 2.9 feet between December 2022 and November 2023.
- Relocation of bottom ash from the BAM and stockpiling at the FAP for future use of bridge lift material. The relocation began in July 2023 and will continue through most of 2024.
- Assessment of RWI Pittboss mechanical enhanced evaporator operation. The evaporators began operating in the FAP in August 2022 but were taken offline in March 2023 due to the buildup of salts on rigging equipment and the units capsizing. The units were updated with a new anchoring system and re-deployed in June 2023.
- Geotechnical investigations were conducted to assess the surface of the FAP for stability. Investigations included the construction and testing of access roads from various materials and evaluation of nearby soils for use as capping material. The investigations aided in the design engineering and analysis of three different

options for addressing stormwater run-on and capping approaches. An evapotranspiration capping strategy was retained as the preferred method for capping the FAP.

- Preliminary assessment of engineering control measures to remove drainable porewater within the waste sluiced to the FAP began in 2022 and continued through 2023. The work included the installation and operation of multiple dewatering test wells in the FAP. The results of testing will assist in refining the FAP closure plan and will be updated to demonstrate closure performance requirements.

5 KEY ACTIVITIES FOR 2024

During 2024, the following key activities are anticipated to be conducted to support CCR groundwater monitoring and corrective action compliance at the Site:

- *Preparation of an Annual Groundwater Monitoring and Corrective Action Report for 2024* – Per 40 CFR §257.90(e), an annual report documenting groundwater monitoring and corrective action activities in 2024 will be prepared no later than January 31, 2025.
- *Continued Detection Monitoring at the BAM with Ongoing Statistical Evaluation for SSIs Over Background* – Per 40 CFR §257.94(b), detection monitoring (including analysis of collected samples for Appendix III constituents) will continue on a semi-annual basis. On an ongoing basis, it will be determined whether there has been an SSI over background at the CCR units undergoing detection monitoring within 90 days of sampling and analysis (40 CFR §257.93[h][2]).
- *Initiation of Assessment Monitoring for CCR Units with an SSI over Background (as applicable)* – Per 40 CFR §257.94(e)(1), within 90 days of detecting an SSI over background levels for any Appendix III constituent, an assessment monitoring program must be established.
- *Continued Assessment Monitoring at the BAP and FAP* – While corrective action evaluation progresses at the BAP and FAP, assessment monitoring (including analysis of collected samples for Appendix III and Appendix IV constituents) must be conducted on a semi-annual basis per 40 CFR §257.95(b) and (d)(1).
- *Method 9056A Sample Analysis Technical Memorandum* – A technical memorandum will be prepared in 2024 that compares the results of the analysis of select groundwater samples for fluoride by USEPA Method 9056A and USEPA Method 300.0 during the November 2023 sampling event.
- *Updates to the Numerical Groundwater Model* – The existing numerical groundwater model for the Site used to assist the evaluation and selection of remedies for the FAP and BAP was updated in 2023, and the findings will be presented in 2024.
- *Interim Response Measures at the FAP and BAP* – In tandem with additional field investigations, the interim response measures outlined in Section 4.44.3 will continue to limit the groundwater impacts from the FAP and BAP while remedies are being evaluated and selected.
- *Interim Remedial Response Evaluation* – APS has continued to progress planning and evaluation for additions to the groundwater monitoring network and interim corrective measures including in-situ testing of amendments in the groundwater and additional extraction wells.
- *Performance Monitoring of Active Systems* – Average flow rates will continue to be monitored for each active seepage extraction system at the FAP and BAP. Additionally, total removed mass of Appendix IV constituents (minus radionuclides) will be calculated for the active seepage extraction systems at the FAP and BAP during the 2024 reporting year.
- *Remedy Selection* – APS will select remedies for the FAP and the BAP that meet the requirements of 40 CFR §257.97(b). Additionally, a remedy selection report will be prepared per 40 CFR §257.97(a).
- *Initiation of Remedial Activities* – Per 40 CFR §257.91(f), APS will begin remedial activities at the FAP and the BAP within 90 days of selecting a remedy for each unit.

Since the nature of corrective actions is implemented in phases based on analysis of data collected during the groundwater monitoring program, the foregoing list only includes reasonably probable activities that will occur in 2024; the list is not comprehensive.

TABLES

Description of Coal Combustion Residual Units

CCR Unit/ CCR Status	Function	Operation	Size/Construction	History
Fly Ash Pond (FAP) <i>Active</i>	<i>Single CCR unit</i> - surface impoundment to store slurried fly ash from the plant.	Historically received a slurry from the plant that contained primarily fly ash but also some bottom ash, boiler slag, flue gas emission control residuals, boiler cleaning waste, oil/water separator solids, and storm water. Historically receives solids from the SEDI.	- 430 acres in aerial extent. - Total storage capacity of about 18,000 acre-feet. - Normal operating elevation of 5,083 ft amsl.	- Constructed beginning in 1976 and placed into service in 1978. - Unlined; constructed on Moenkopi bedrock and a thin veneer of alluvial sediments. - The dam is constructed of earth fill with a central clay core that extends to bedrock where bedrock is shallow. In the central portion of the dam, where bedrock is deeper, a slurry cutoff wall extends one foot into bedrock or two feet into stiff clay.
Bottom Ash Pond (BAP) <i>Active</i>	<i>Single CCR unit</i> - surface impoundment to store slurried bottom ash from the plant.	Bottom ash is pumped to the BAP as a slurry. The bottom ash settles in the east and west upstream storage cells and the water is decanted to the reservoir and ultimately siphoned back to the plant for reuse. Slurry may also contain fly ash, boiler slag, flue gas emission control residuals, sedimentation pond effluent, cooling tower blowdown, oil/water separator effluent and solids, boiler cleaning waste, and storm water. Historically received solids from the SEDI.	- 105 acres in aerial extent. - Total storage capacity of 2,300 acre-feet. - Normal operating pool elevation of 5,114 feet amsl.	- Constructed beginning in 1976 and placed into service in 1978. - Unlined; constructed on Moenkopi bedrock and Tanner Wash alluvium. - Consists of a reservoir directly behind the dam and two storage cells upstream of the reservoir. - The dam is constructed of earth fill with a central clay core that extends to bedrock where bedrock is shallow. In the central portion of the dam, where bedrock is deeper, a slurry cutoff wall extends one foot into bedrock or two feet into stiff clay.
Bottom Ash Monofill (BAM) <i>Active</i>	<i>Single CCR unit</i> - landfill for bottom ash solids excavated from the BAP.	Bottom ash that has been drained of water is excavated from the BAP and permanently stored in the BAM.	- 41 acres in aerial extent.	- Placed into service in 1999.
Sedimentation Pond (SEDI) <i>Closure Complete</i>	<i>Single CCR unit</i> - collected water from drains around plant site, including storm water, process water, plant water, and slurry from plant leaks.	Collected discharge from on-site secondary wastewater treatment plant, effluent from the oil/water separator, vehicle wash water, plant wash water, and FGD wastes from scrubber or scrubber feed tank upsets. Water collected in the SEDI was pumped to Cholla's general water sump for recycling as process water.	- 1.3 acres in aerial extent. - Total storage capacity of 10.5 acre-feet. - Maximum pond depth of 10 feet. - the top of the pond side slope was at 5,019 feet amsl	- Placed into service in 1976. - Lined with a 2-foot-thick layer of compacted clay. - Constructed below grade. - Discharges to the SEDI ceased as of October 2020. - Demolition and excavation of SEDI complete as of October 2021. - Closure complete October 2022.

Notes and Abbreviations:

ADWR - Arizona Department of Water Resources
 AMSL - Above mean sea level (Vertical datum is NAVD 88)
 BAM - Bottom Ash Monofill
 BAP - Bottom Ash Pond
 bgs - below ground surface

CCR - Coal combustion residuals
 FAP - Fly Ash Pond
 ft - feet
 LCR - Little Colorado River

N/A - not applicable

¹ In previous documents TDX-3 is also known as BSX-01, TDX-4 is also known as BSX-02, and TDX-5 is also known as BSX-03
² Approximate - elevation based on measured stickups
³ Well was formerly monitored for the SEDI CCR unit which was closed by removal in October 2022
 Wells in gray text were abandoned

Well Designation Descriptions:

Background - Monitoring location used to determine background groundwater quality that has not been affected by the CCR unit under investigation (40 CFR §257.91)
 Downgradient - Monitoring location used to evaluate the nature and extent of groundwater conditions associated with each CCR unit
 Downgradient Boundary - Monitoring location used to assess the groundwater conditions at the boundary of each CCR unit
 Extraction - Well location that currently supports the hydraulic containment system with the extraction of groundwater located downgradient of a CCR unit
 Extraction (Inactive) - Well location installed to assist with the extraction of groundwater that does not actively support the current hydraulic containment system
 Supplementary - Monitoring location intended to further support interpretations of both immediate CCR Unit-area conditions and Site-wide conditions

Notes and Abbreviations:^(a) Totals exclude field duplicate samples.^(b) In previous documents TDX-3 is also known as BSX-01, TDX-4 is also known as BSX-02, and TDX-5 is also known as BSX-03^(c) Background well for both the BAP and FAP.¹Well was not sampled as part of the resampling event since this location was not included in the implemented 1 of 2 resampling strategy for the initial exceedance above the associated BTV.²Well contained no groundwater and was measured dry during the sampling event³Well contained an insufficient amount of groundwater to support sample collection

NS = Not Sampled

Monitoring Point Descriptions:

Background - Monitoring location used to determine background groundwater quality that has not been affected by the CCR unit under investigation (40 CFR §257.91)

Downgradient - Monitoring location used to evaluate the nature and extent of groundwater conditions associated with each CCR unit

Downgradient Boundary - Monitoring location used to assess the groundwater conditions at the boundary of each CCR unit

Extraction - Well location that currently supports the hydraulic containment system with the extraction of groundwater located downgradient of a CCR unit

Supplementary - Monitoring location intended to further support interpretations of both immediate CCR Unit-area conditions and Site-wide conditions

Seepage Collection Sump - Sump location that currently supports the hydraulic containment system with the extraction of groundwater located downgradient of a CCR unit

Table 3-3
 Aquifer Properties and Groundwater Flow Calculations

CCR Unit (Wells Used in Calculations)	Estimated Hydraulic Conductivity [ft/d]	Estimated Effective Porosity	Monitoring Event	Calculated Hydraulic Gradient [ft/ft]	Calculated Groundwater Flow Direction [degrees from North]	Estimated Groundwater Flow Rate [ft/d]

Legend

CCR Monitoring Well Location

- CCR Monitoring Well - Downgradient, Alluvial
- CCR Monitoring Well - Downgradient Boundary, Alluvial
- CCR Monitoring Well - Downgradient Boundary, Moenkopi Formation (Moqui Member)

Supplementary Site Monitoring Well Location

- Alluvial Monitoring Well
- Moenkopi Formation (Moqui Member) Monitoring Well

Estimated Alluvial Extent

APS Land Ownership

Alluvial Aquifer Potentiometric Surface (October 2023)

Groundwater Elevation (Dashed Where Inferred)

Cobalt Concentration in Groundwater (October and November 2023)

- >0.006 mg/L
- >0.01 mg/L
- >0.02 mg/L
- >0.03 mg/L
- >0.04 mg/L
- >0.05 mg/L

GWPS (0.006 mg/L; Dashed Where Inferred)

Notes and Abbreviations:

- W-304** Well Identification
- 5011.73** Alluvial/ Moenkopi Moqui Groundwater Elevation (ft amsl) October 2023
- 5109.44** CCR Surface Water Elevation October 2023
- NM** Not Measured
- 0.0092** Cobalt concentration (mg/L)
- J** Result is estimated quantity
- U** The analyte was analyzed for, but not detected
- ft amsl** Feet above mean sea level
- mg/L** Milligrams per liter
- CCR** Coal Combustion Residuals
- GWPS** Groundwater Protection Standard

2023 ANALYTICAL
LABORATORY REPORTS

ANALYTICAL REPORT

PREPARED FOR

Attn: Natalie Chrisman
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Generated 2/15/2023 2:22:09 PM

JOB DESCRIPTION

CCR Groundwater Monitoring
SDG NUMBER APS Cholla Power Plant (BAM)

JOB NUMBER

550-196984-1

Eurofins Phoenix

Job Notes

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender and destroy this report immediately. This report shall not be reproduced except in full, without prior express written approval by the laboratory.

The data in the report relate to the field sample(s) as received by the laboratory and associated QC. All results have been reviewed and have been found to be compliant with laboratory and accreditation requirements, with the exception of the noted deviation(s). For questions, please contact the Project Manager.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Authorization

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-196984-1
SDG: APS Cholla Power Plant (BAM)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-196984-1
SDG: APS Cholla Power Plant (BAM)

Job ID: 550-196984-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-196984-1

Comments

No additional comments.

Receipt

The samples were received on 1/30/2023 10:39 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.3° C.

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RR	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Job Narrative 550-200849-1

Comments

No additional comments.

Receipt

The samples were received on 4/17/2023 1:38 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 3.9° C, 6.4° C and 9.3° C.

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria: CH-CCR-M43A-0423 (550-200849-1), CH-CCR-M43A-0423 (550-200849-2), CH-CCR-M44D-0423 (550-200849-3), CH-CCR-M45A-0423 (550-200849-4), CH-CCR-M63A-0423 (550-200849-7), CH-CCR-M65A-0423 (550-200849-10), CH-CCR-M65A-0423 (550-200849-11) and CH-CCR-FD05-0423 (550-200849-16). This does not meet regulatory requirements.

HPLC/IC

Method 300.0: The following samples were diluted for Fluoride due to matrix interferences as well as high amounts of metals constituents: CH-CCR-M43A-0423 (550-200849-1), CH-CCR-M44D-0423 (550-200849-3), CH-CCR-M45A-0423 (550-200849-4), CH-CCR-M46A-0423 (550-200849-5), CH-CCR-M63A-0423 (550-200849-7), CH-CCR-M65A-0423 (550-200849-10), CH-CCR-M66A-0423 (550-200849-12), CH-CCR-M67A-0423 (550-200849-14) and CH-CCR-FD05-0423 (550-200849-16). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 200.7 Rev 4.4: The CCB for analytical batch 610352 contained Li above the absolute value of the reporting limit (RL). None of the samples associated with this CCB contained the target compound or were QC in target range; therefore, re-extraction and/or re-analysis of samples were not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method 353.2: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 280-609489 were outside control limits for one or more analytes, see QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 353.2: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 280-609489 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-200849-1
SDG: APS Cholla Power Plant (FAP)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon
SM 5310B		Water	Dissolved Organic Carbon - Duplicate
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins Denver

The accreditations/certifications listed below are applicable to this report.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	False	Cooler temperature outside required temperature criteria.
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Cholla Power Plant Water Samples

OShea, Samantha <samantha.oshea@wsp.com>
To: "alex@radsafe.com" <alex@radsafe.com>

Fri, Apr 21, 2023 at 7:29 PM

Alex-

Please add the BudHunt sample to the login, it was on the TestAmerica CoC and it may have just been left off the Radiation Safety CoC. There should have been a CH-CCR-W125-0423 sample but it may have been accidently left with TestAmerica. The field team will be on Site on Monday, I will just have them resample that location. Please remove from the login. Sorry for the inconvenience, thank you.

Samantha O'Shea

JOB DESCRIPTION

CCR Groundwater Monitoring
SDG NUMBER APS Cholla Power Plant (BAP)

JOB NUMBER

550-200842-1

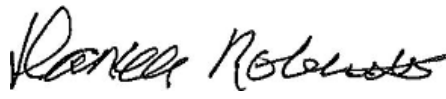

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

SDG: APS Cholla Power Plant (BAP)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.

Metals

Qualifier	Qualifier Description
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-200842-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative 550-200842-1

Comments

No additional comments.

Receipt

The samples were received on 4/17/2023 1:36 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 7.3° C and 9.3° C.

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria: CH-CCR-FD02-0423 (550-200842-1), CH-CCR-FD02-0423 (550-200842-2), CH-CCR-W305-0423 (550-200842-3), CH-CCR-W305-0423 (550-200842-4), CH-CCR-MW79A-0423 (550-200842-5), CH-CCR-MW79A-0423 (550-200842-6), CH-CCR-W317-0423 (550-200842-7), CH-CCR-FD04-0423 (550-200842-7[DUJ]), CH-CCR-W317-0423 (550-200842-7[MSJ]), CH-CCR-W317-0423 (550-200842-7[MSD]) and CH-CCR-FD04-0423 (550-200842-8). This does not meet regulatory requirements.

HPLC/IC

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-FD02-0423 (550-200842-1), CH-CCR-W305-0423 (550-200842-3), CH-CCR-MW79A-0423 (550-200842-5), CH-CCR-W317-0423 (550-200842-7) and CH-CCR-FD04-0423 (550-200842-8). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 550-200842-2

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-200842-1
SDG: APS Cholla Power Plant (BAP)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-09-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon
SM 5310B		Water	Dissolved Organic Carbon - Duplicate
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins Denver

The accreditations/certifications listed below are applicable to this report.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	False	Cooler temperature outside required temperature criteria.
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

ANALYTICAL REPORT

PREPARED FOR

Attn: Natalie Chrisman

Joseph City, Arizona 86032

Generated 6/13/2023 4:28:28 PM Revision 1

JOB DESCRIPTION

CCR Groundwater Monitoring
SDG NUMBER APS Cholla Power Plant (BAP)

JOB NUMBER

550-201150-1

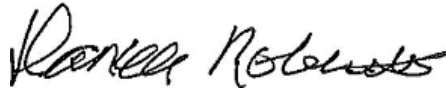

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Receipt

The samples were received on 4/21/2023 2:43 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.1° C.

HPLC/IC

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-M52A-0423 (550-201150-1), CH-CCR-M55A-0423 (550-201150-5), CH-CCR-MW69A-0423 (550-201150-7), CH-CCR-MW70M-0423 (550-201150-9) and CH-CCR-MW74M-0423 (550-201150-17). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following sample was diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-MW72M-0423 (550-201150-13). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-W125-0423 (550-201150-39) and CH-CCR-BudHunt-0423 (550-201150-40). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-W301-0423 (550-201150-19), CH-CCR-W303-0423 (550-201150-21), CH-CCR-W306-0423 (550-201150-23), CH-CCR-W308-0423 (550-201150-25), CH-CCR-W309-0423 (550-201150-27) and CH-CCR-M64A-0423 (550-201150-35). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-W314-0423 (550-201150-29), CH-CCR-M50A-0423 (550-201150-31), CH-CCR-M51A-0423 (550-201150-33) and CH-CCR-W123R-0423 (550-201150-37). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 200.7 Rev 4.4: The continuing calibration verification (CCV) associated with batch 550-299621 recovered above the upper control limit for Beryllium and Sodium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

CH-CCR-M52A-0423 (550-201150-1), CH-CCR-M53A-0423 (550-201150-3), CH-CCR-M55A-0423 (550-201150-5), CH-CCR-MW69A-0423 (550-201150-7), CH-CCR-MW70M-0423 (550-201150-9), CH-CCR-MW71A-0423 (550-201150-11),

Receipt

The samples were received on 4/21/2023 2:43 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.1°C

Metals

Method 200.8_CWA_LL: The continuing calibration blank (CCB) for analytical batch 550-301273 contained Arsenic above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed. CH-CCR-M53A-0423 (550-201150-3), CH-CCR-M55A-0423 (550-201150-5), CH-CCR-MW69A-0423 (550-201150-7), CH-CCR-MW70M-0423 (550-201150-9), CH-CCR-MW71A-0423 (550-201150-11), CH-CCR-MW74M-0423 (550-201150-17), CH-CCR-W303-0423 (550-201150-21), CH-CCR-W308-0423 (550-201150-25), CH-CCR-W309-0423 (550-201150-27), CH-CCR-W314-0423 (550-201150-29), CH-CCR-M64A-0423 (550-201150-35) and CH-CCR-BudHunt-0423 (550-201150-40)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-201150-1
SDG: APS Cholla Power Plant (BAP)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-09-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon
SM 5310B		Water	Dissolved Organic Carbon - Duplicate
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins Denver

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0713	05-22-23

Sample Disposal (A fee may be a)

Special Instructions/QC Requirements & Comments:

Perform Method 200.8 with collision cell; *As marked on the bottle; perform dissolved analyses with sample provided in bottles marked 'field filtered'

Preservation Used: 1=Ice, 2=HCl, 3=H2SO4, 4=HNO3, 5=NaOH, 6=Other

Possible Hazard Identification: Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

Special Instructions/QC Requirements & Comments:

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other
Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.
 Non-Hazard Flammable Skin Irritant Poison B Unknown
 Return to Client Disposal by Lab Archive for _____ Months

Special Instructions/QC Requirements & Comments:
Perform Method 200.8 with collision cell; * As marked on the bottle, perform dissolved analyses with sample provided in bottles marked 'field filtered'

Cooler Temp. (°C): Obs'd: 7°C

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

List Source: Eurofins Phoenix

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

JOB DESCRIPTION

CCR Groundwater Monitoring
SDG NUMBER APS Cholla Power Plant (BAP)

JOB NUMBER

550-201346-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
E4	Concentration estimated. Analyte was detected below laboratory minimum reporting level (MRL) but above MDL.
E8	Analyte reported to MDL per project specification. Target analyte was not detected in the sample.
L3	The associated blank spike recovery was above method acceptance limits.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
D1	Sample required dilution due to matrix.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit

Glossary (Continued)

Abbreviation **These commonly used abbreviations may or may not be present in this report.**

PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative 550-201346-1

Comments

No additional comments.

Receipt

The samples were received on 4/27/2023 8:57 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 3.6° C, 4.0° C, 4.2° C, 4.4° C and 4.8° C.

Receipt Exceptions

Method 353.2: Samples 13, 15, 17, 19, 21, 23, 25, 27, 29, 31, and 33 were received without the proper preservation, post preserved sample volume in sample receiving.

CH-CCR-BAP-0423 (550-201346-13), CH-CCR-BAPTD-0423 (550-201346-15), CH-CCR-Petroglyph-0423 (550-201346-17), CH-CCR-TannerWash-0423 (550-201346-19), CH-CCR-TWX3-0423 (550-201346-21), CH-CCR-TWX5-0423 (550-201346-23), CH-CCR-TWX6-0423 (550-201346-25), CH-CCR-TWX7-0423 (550-201346-27), CH-CCR-TWX9-0423 (550-201346-29), CH-CCR-TWX10-0423 (550-201346-31) and CH-CCR-EB01-0423 (550-201346-33).

HPLC/IC

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-W302-0423 (550-201346-1), CH-CCR-W304-0423 (550-201346-3), CH-CCR-W307R-0423 (550-201346-5), CH-CCR-FD03-0423 (550-201346-7), CH-CCR-MW77A-0423 (550-201346-9), CH-CCR-MW78A-0423 (550-201346-11), CH-CCR-BAP-0423 (550-201346-13), CH-CCR-BAPTD-0423 (550-201346-15) and CH-CCR-Petroglyph-0423 (550-201346-17). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-TWX7-0423 (550-201346-27) and CH-CCR-TWX9-0423 (550-201346-29). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-TannerWash-0423 (550-201346-19), CH-CCR-TWX6-0423 (550-201346-25), CH-CCR-TWX10-0423 (550-201346-31), CH-CCR-FAP-0423 (550-201346-35) and CH-CCR-GeronimoC-0423 (550-201346-37). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: CH-CCR-TWX3-0423 (550-201346-21) and CH-CCR-TWX5-0423 (550-201346-23). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 200.7 Rev 4.4: The instrument blank for analytical batch 280-611360 contained Li greater than one-half the reporting limit (RL), and

Case Narrative

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-201346-1
SDG: APS Cholla Power Plant (BAP)

Job ID: 550-201346-1 (Continued)

Laboratory: Eurofins Phoenix (Continued)

were not re-analyzed because they were >10x the blank. The data have been qualified and reported.

Method 200.7 Rev 4.4: The laboratory control sample (LCS) associated with preparation batch 550-299405 and analytical batch 550-300171 was outside acceptance criteria. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance. CH-CCR-HuntB-0423 (550-201346-42)

Method 200.7 Rev 4.4: The continuing calibration blank (CCB) for analytical batch 550-300233 contained Boron above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed. CH-CCR-TWX3-0423 (550-201346-21), CH-CCR-TWX5-0423 (550-201346-23), CH-CCR-TWX6-0423 (550-201346-25), CH-CCR-TWX7-0423 (550-201346-27), CH-CCR-GeronimoC-0423 (550-201346-37) and CH-CCR-GeronimoD-0423 (550-201346-39)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method 353.2: Sample had to be diluted due to the impact it had on the cadmium coil.

CH-CCR-FAP-0423 (550-201346-35)

Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 550-299426 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 550-299527 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries and precision for analytical batch 550-299691 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory sample control duplicate (LCS/LCSD) precision was within acceptance limits.

Method SM 2540C: Total dissolved solids were detected above the reporting limit (RL) in the method blank associated with analytical batch 550-299557 as well as in the following samples: CH-CCR-BAP-0423 (550-201346-13), CH-CCR-BAPTD-0423 (550-201346-15), CH-CCR-Petroglyph-0423 (550-201346-17), (MB 550-299557/1), (550-201452-A-1) and (550-201452-A-1 DU).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Narrative

Job Narrative 550-201346-2

Comments

No additional comments.

Receipt

The samples were received on 4/27/2023 8:57 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 3.6° C, 4.0° C, 4.2° C, 4.4° C and 4.8° C.

Metals

Method 200.8: The following samples were diluted due to the nature of the sample matrix: CH-CCR-W307R-0423 (550-201346-6), CH-CCR-MW78A-0423 (550-201346-12), CH-CCR-BAP-0423 (550-201346-14) and CH-CCR-BAPTD-0423 (550-201346-16). Elevated reporting limits (RLs) are provided.

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 570-334375 and analytical batch 570-334514 were outside control limits for Antimony. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Accreditation/Certification Summary

Client: Arizona Public Service Company
 Project/Site: CCR Groundwater Monitoring

Job ID: 550-201346-1
 SDG: APS Cholla Power Plant (BAP)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-09-23
<p>The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.</p>			
Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature
SM 5310B		Water	Dissolved Organic Carbon
SM 5310B		Water	Dissolved Organic Carbon - Duplicate
SM 5310B		Water	Dissolved Organic Carbon - Quad

Laboratory: Eurofins Calscience

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Cholla Water Samples

OShea, Samantha <samantha.oshea@wsp.com>

Tue, Apr 18, 2023 at 12:40 PM

To: "alex@radsafe.com" <alex@radsafe.com>

Cc: "Pamela.Norris@aps.com" <Pamela.Norris@aps.com>, "Natalie.ChrismanLazarr@aps.com" <Natalie.ChrismanLazarr@aps.com>, "Cody.Miller@aps.com" <Cody.Miller@aps.com>

Alex-

We don't need those samples run for the Matrix Spike/Matrix Spike Duplicate process. Please run the parent sample and the duplicate sample for CH-CCR-W317-0423. Thank you and I apologize for the confusion.

Samantha O'Shea

Sam - Can you please address Alex's email below? I'm not sure about QC samples for rad analyses. Please confer with your chemist if you don't know. - Natalie

Hi Natalie,

I'm with Radiation Safety Engineering and we just received your groundwater samples from Cholla Power Plant. The majority of the samples received had two bottles per sample but one of the samples (CH-CCR-W317-0423) came with six bottles. On two of the bottles there is a -SD after the 0423 and on another two there is a -MS after the 0423.

Are these duplicate and matrix spike samples? If it is a matrix spike sample, did you spike them already? Do you want us to run these samples separately?

Just want to clarify before we start to analyze the samples.

Thanks!

Alex

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
R8	Sample RPD exceeded the method acceptance limit.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-200839-1
SDG: APS Cholla Power Plant (BAM)

Job ID: 550-200839-1

Laboratory: Eurofins Phoenix

Narrative

**Job Narrative
550-200839-1**

Receipt

The samples were received on 4/17/2023 1:38 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 9.3°C

Receipt Exceptions

The following samples were received at the laboratory outside the required temperature criteria: CH-CCR-M54-0423 (550-200839-1), CH-CCR-M59-0423 (550-200839-2), CH-CCR-M59-0423 (550-200839-2[DU]), CH-CCR-M59-0423 (550-200839-2[MS]), CH-CCR-M59-0423 (550-200839-2[MSD]), CH-CCR-M61-0423 (550-200839-3) and CH-CCR-FD01-0423 (550-200839-4). This does not meet regulatory requirements. The temperature of the cooler at receipt time was 9.3°C

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 2540C_Calcd: The sample duplicate (DUP) precision for analytical batch 550-298495 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	False	Cooler temperature outside required temperature criteria.
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

ANALYTICAL REPORT

PREPARED FOR

Attn: Natalie Chrisman
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Generated 6/12/2023 3:30:35 PM

JOB DESCRIPTION

CCR Groundwater Monitoring
SDG NUMBER APS Cholla Power Plant (BAM)

JOB NUMBER

550-202028-1

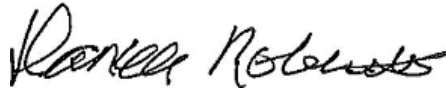

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Project/Site: CCR Groundwater Monitoring

Job ID: 550-202028-1
SDG: APS Cholla Power Plant (BAM)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Laboratory: Eurofins Phoenix

Narrative

**Job Narrative
550-202028-1**

Comments

No additional comments.

Receipt

The sample was received on 5/10/2023 5:11 PM. Unless otherwise noted below, the sample arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.3° C.

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Method SM 2540C: Constant weight was not achieved after 3 drying cycles for the following sample: (550-202181-A-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

JOB DESCRIPTION

CCR Groundwater Moitoring
APS Cholla Power Plant (FAP)

JOB NUMBER

550-210925-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
▫	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Arizona Public Service Company
Project: CCR Groundwater Moitoring

Job ID: 550-210925-1

Job ID: 550-210925-1

Eurofins Phoenix

Job Narrative 550-210925-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 11/22/2023 9:13 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.8°C

HPLC/IC

Method 300_ORGFMS: The following samples were diluted due to the nature of the sample matrix: CH-CCR-M44D-1023 (550-210925-1) and CH-CCR-FD05-1023 (550-210925-2). Elevated reporting limits (RLs) are provided. The following samples require a 2x dilution in order to preserve instrumentation.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
R8	Sample RPD exceeded the method acceptance limit.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: Eurofins Phoenix

Narrative

Job Narrative 550-209145-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/13/2023 4:49 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.4°C

HPLC/IC

Method 300_ORGFMS: Due to the high concentration of chloride and sulfate the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-309721 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300_ORGFMS: Due to the high concentration of nitrate and nitrite the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-310017 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 200.7_CWA: The following samples were diluted to bring the concentration of target analytes within the calibration range: CH-CCT-M64A-1023 (550-209145-3), CH-CCR-W123R-1023 (550-209145-5), CH-CCR-FAP-1023 (550-209145-7) and CH-CCR-FAP-1023 (550-209145-8). Elevated reporting limits (RLs) are provided.

Method 200.7_CWA: The following samples were diluted to bring the concentration of target analytes within the calibration range: CH-CCT-M64A-1023 (550-209145-3), CH-CCR-W123R-1023 (550-209145-5), CH-CCR-FAP-1023 (550-209145-7) and CH-CCR-FAP-1023 (550-209145-8). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 2540C_Calcd: The sample duplicate (DUP) precision for analytical batch 550-309541 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

JOB DESCRIPTION

CCR Groundwater Monitoring
APS Cholla Power Plant (FAP)

JOB NUMBER

550-209471-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
L3	The associated blank spike recovery was above method acceptance limits.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Laboratory: Eurofins Phoenix

Narrative

Job Narrative 550-209471-1

REVISION

The report being provided is a revision of the original report sent on 11/10/2023. The report (revision 1) is being revised due to Final report was sent out with duplicate 200.8 metals.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/20/2023 3:01 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 1.9°C, 2.1°C, 2.3°C, 3.1°C, 3.2°C and 4.6°C

HPLC/IC

Method 300_ORGFMS: The following samples were diluted due to the nature of the sample matrix: CH-CCR-M43A-1023 (550-209471-1), CH-CCR-M45A-1023 (550-209471-3), CH-CCR-W125-1023 (550-209471-16) and CH-CCR-BudHunt-1023 (550-209471-19). Elevated reporting limits (RLs) are provided. The following samples contain an analyte not part of the method profile which interferes with fluoride providing an indiscernible chromatogram. A 2x dilution is required.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 200.8_CWA_LL: The laboratory control sample (LCS) associated with preparation batch 550-309754 and analytical batch 550-309936 was outside acceptance criteria for Barium. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance. CH-CCR-M43A-1023 (550-209471-1), CH-CCR-M45A-1023 (550-209471-3), CH-CCR-M46A-1023 (550-209471-4), CH-CCR-M50A-1023 (550-209471-6), CH-CCR-M51A-1023 (550-209471-8), CH-CCR-M65A-1023 (550-209471-10), CH-CCR-M66A-1023 (550-209471-12), CH-CCR-M67A-1023 (550-209471-14), CH-CCR-W125-1023 (550-209471-16), CH-CCR-W-126R-1023 (550-209471-17) and CH-CCR-BudHunt-1023 (550-209471-19)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-209471-1
SDG: APS Cholla Power Plant (FAP)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Calscience

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0830	11-16-23
California	SCAQMD LAP	17LA0919	11-30-23
California	State	3082	07-31-24

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

JOB DESCRIPTION

CCR Groundwater Monitoring
APS Cholla Power Plant (FAP)

JOB NUMBER

550-209610-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Job ID: 550-209610-1
SDG: APS Cholla Power Plant (FAP)

Job ID: 550-209610-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative 550-209610-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/25/2023 1:44 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.1°C, 1.4°C, 1.6°C and 3.2°C

Receipt Exceptions

1 of the 4 voas for DOC has EW02 listed on the sample label as the sample ID.
The sample date and time listed on the label matched the date and time with the EW04 samples.

Labeled the voa and placed it in a separate bag with DNU written on the little bag.
The lab has 3 vials to use for the DOC method.

CH-CCR-EW04-1023 (550-209610-14)

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 200.8_CWA_LL: Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following samples: CH-CCR-GeronimoC-1023 (550-209610-1), CH-CCR-GeronimoC-1023 (550-209610-2), CH-CCR-GeronimoD-1023 (550-209610-3), CH-CCR-GeronimoD-1023 (550-209610-4), CH-CCR-GSX1R-1023 (550-209610-5), CH-CCR-GSX1R-1023 (550-209610-6), CH-CCR-EW01-1023 (550-209610-7), CH-CCR-EW01-1023 (550-209610-8), CH-CCR-EW02-1023 (550-209610-9), CH-CCR-EW02-1023 (550-209610-10), CH-CCR-EW03-1023 (550-209610-11), CH-CCR-EW03-1023 (550-209610-12), CH-CCR-EW04-1023 (550-209610-13), CH-CCR-EW04-1023 (550-209610-14), CH-CCR-HuntB-1023 (550-209610-15), CH-CCR-HuntB-1023 (550-209610-16), (550-209610-I-1-A MS ^10) and (550-209610-I-1-B MSD ^10).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
 Project/Site: CCR Groundwater Monitoring

Job ID: 550-209610-1
 SDG: APS Cholla Power Plant (FAP)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Calscience

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0830	11-16-23
California	SCAQMD LAP	17LA0919	11-30-23
California	State	3082	07-31-24

JOB DESCRIPTION

CCR Groundwater Monitoring
SDG NUMBER APS Cholla Power Plant (BAP)

JOB NUMBER

550-209146-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.

Metals

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
R8	Sample RPD exceeded the method acceptance limit.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-209146-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative 550-209146-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/13/2023 4:49 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 2.0°C, 2.0°C, 2.0°C and 2.4°C

HPLC/IC

Method 300_ORGFMS: Due to the high concentration of chloride and sulfate the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-309721 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300_ORGFMS: Due to the high concentration of chloride and sulfate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-309930 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300_ORGFMS: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 550-310012 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 300_ORGFMS: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 550-310012 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 2540C_Calcd: The sample duplicate (DUP) precision for analytical batch 550-309541 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

JOB DESCRIPTION

CCR Groundwater Monitoring
APS Cholla Power Plant (BAP)

JOB NUMBER

550-209146-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.

Metals

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
R8	Sample RPD exceeded the method acceptance limit.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

Narrative

**Job Narrative
550-209146-1**

REVISION

The report being provided is a revision of the original report sent on 11/2/2023. The report (revision 1) is being revised due to Client requested a rerun for method 300.0, sample 550-209146-22.

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/13/2023 4:49 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 2.0°C, 2.0°C, 2.0°C and 2.4°C

HPLC/IC

Method 300_ORGFMS: Due to the high concentration of chloride and sulfate the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-309721 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300_ORGFMS: Due to the high concentration of chloride and sulfate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-309930 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300_ORGFMS: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 550-310012 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 300_ORGFMS: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 550-310012 was outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample / laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 2540C_Calcd: The sample duplicate (DUP) precision for analytical batch 550-309541 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Cobalt	0.0016		0.00050	mg/L	1		200.8 LL	Total/NA
Molybdenum	0.0015	T5	0.00050	mg/L	1		200.8 LL	Total/NA
Selenium	0.0025		0.00050	mg/L	1		200.8 LL	Total/NA
Alkalinity as CaCO3	170		6.0	mg/L	1		SM 2320B	Total/NA
Bicarbonate Alkalinity as CaCO3	170		6.0	mg/L	1		SM 2320B	Total/NA
Total Dissolved Solids	9100		100	mg/L	1		SM 2540C	Total/NA
pH	7.3	H5	1.7	SU	1		SM 4500 H+ B	Total/NA
Temperature	12.0	H5 T5	0.1	Degrees C	1		SM 4500 H+ B	Total/NA
Dissolved Organic Carbon	1.3		0.50	mg/L	1		SM 5310B	Dissolved
Dissolved Organic Carbon - Duplicate	1.3		0.50	mg/L	1		SM 5310B	Dissolved
Dissolved Organic Carbon - Quad	1.3		0.50	mg/L	1		SM 5310B	Dissolved

Client Sample ID: CH-CCR-W308-1023

Lab Sample ID: 550-209146-16

Analyte	Result	Qualifier	RL	Unit	Dil Fac	D	Method	Prep Type
Manganese	0.21		0.010	mg/L	1		200.7	Dissolved
Arsenic	0.78		0.50	ug/L	1		200.8 LL	Dissolved
Cobalt	1.4		0.50	ug/L	1		200.8 LL	Dissolved

This Detection Summary does not include radiochemical test results.

Eurofins Phoenix

Detection Summary

Client: Arizona Public Service Company
 Project/Site: CCR Groundwater Monitoring

Job ID: 550-209146-1
 SDG: APS Cholla Power Plant (BAP)

Client Sample ID: CH-CCR-W309-1023

Lab Sample ID: 550-209146-17

Analyte	Result	Qualifier	RL	Unit	Dil Fac	D	Method	Prep Type
Chloride	1600	D2	40	mg/L	20		300.0	Total/NA
Fluoride	1.1		0.40	mg/L	1		300.0	Total/NA
Sulfate	3200	D2	100	mg/L	50		300.0	Total/NA
Lithium	0.35	T5	0.020	mg/L	1		200.7 Rev 4.4	Total/NA
Boron	0.45		0.050	mg/L	1		200.7 Rev 4.4	Total/NA
Calcium	460		2.0	mg/L	1		200.7 Rev 4.4	Total/NA
Magnesium	90		2.0	mg/L	1		200.7 Rev 4.4	Total/NA
Manganese	0.46		0.010	mg/L	1		200.7 Rev 4.4	Total/NA
Potassium	6.7		0.50	mg/L	1		200.7 Rev 4.4	Total/NA
Sodium	1800		2.5	mg/L	5		200.7 Rev 4.4	Total/NA
Arsenic	0.0011		0.00050	mg/L	1		200.8 LL	Total/NA
Barium	0.0070		0.00050	mg/L	1		200.8 LL	Total/NA
Chromium	0.016		0.0010	mg/L	1		200.8 LL	Total/NA
Molybdenum	0.0088	T5	0.00050	mg/L	1		200.8 LL	Total/NA
Selenium	0.16		0.00050	mg/L	1		200.8 LL	Total/NA
Nitrate Nitrite as N	2.9		0.10	mg/L	1		353.2	Total/NA
Alkalinity as CaCO3	170		6.0	mg/L	1		SM 2320B	Total/NA
Bicarbonate Alkalinity as CaCO3	170		6.0	mg/L	1		SM 2320B	Total/NA
Total Dissolved Solids	7200		100	mg/L	1		SM 2540C	Total/NA
pH	7.6	H5	1.7	SU	1		SM 4500 H+ B	Total/NA
Temperature	12.2	H5 T5	0.1	Degrees C	1		SM 4500 H+ B	Total/NA
Dissolved Organic Carbon	0.86		0.50	mg/L	1		SM 5310B	Dissolved
Dissolved Organic Carbon - Duplicate	0.84		0.50	mg/L	1		SM 5310B	Dissolved
Dissolved Organic Carbon - Quad	0.86		0.50	mg/L	1		SM 5310B	Dissolved

Client Sample ID: CH-CCR-W309-1023

Lab Sample ID: 550-209146-18

Analyte	Result	Qualifier	RL	Unit	Dil Fac	D	Method	Prep Type
Manganese	0.45		0.010	mg/L	1		200.7	Dissolved
Arsenic	0.99		0.50	ug/L	1		200.8 LL	Dissolved

Client Sample ID: CH-CCR-W317-1023

Lab Sample ID: 550-209146-19

Analyte	Result	Qualifier	RL	Unit	Dil Fac	D	Method	Prep Type
Chloride	1600	D2	40	mg/L	20		300.0	Total/NA
Sulfate	650	D2	40	mg/L	20		300.0	Total/NA
Lithium	0.056	T5	0.020	mg/L	1		200.7 Rev 4.4	Total/NA
Boron	0.18		0.050	mg/L	1		200.7 Rev 4.4	Total/NA
Calcium	350	M3	2.0	mg/L	1		200.7 Rev 4.4	Total/NA
