Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

JOB DESCRIPTION

CCR Groundwater Monitoring
APS Cholla Power Plant (BAP)

JOB NUMBER

550-209476-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

SDG: APS Cholla Power Plant (BAP)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
L3	The associated blank spike recovery was above method acceptance limits.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-209476-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative 550-209476-1

Receipt

The samples were received on 10/20/2023 3:01 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 1.9° C, 2.1° C, 2.3° C, 3.1° C, 3.2° C and 4.6° C.

HPLC/IC

Method 300.0: The following sample was diluted due to the nature of the sample matrix: CH-CCR-MW72M-1023 (550-209476-9). Elevated reporting limits (RLs) are provided. The following samples contain an analyte not part of the method profile which interferes with fluoride providing an indiscernible chromatogram. A 2x dilution is required.

Method 300.0: Due to the high concentration of chloride and sulfate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-309930 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300.0: Due to the high concentration of chloride and sulfate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-309960 could not be evaluated for accuracy and precision of those analytes. The associated laboratory control sample (LCS) met acceptance criteria.

Methods 300.0, 9056A: The following samples were analyzed outside of analytical holding time due to analyst scheduling errors: (550-209060-O-1) and (550-209060-O-1 ^10)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 200.8 LL: The laboratory control sample (LCS) associated with preparation batch 550-309752 and analytical batch 550-309934 was outside acceptance criteria for the analyte Barium. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance. CH-CCR-W306-1023 (550-209476-21) and CH-CCR-W314-1023 (550-209476-23)

Method 200.8 LL: The laboratory control sample (LCS) associated with preparation batch 550-309755 and analytical batch 550-309935 was outside acceptance criteria for the analyte Barium. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance. CH-CCR-M53A-1023 (550-209476-1), CH-CCR-MW69A-1023 (550-209476-3), CH-CCR-MW70M-1023 (550-209476-5), CH-CCR-MW71A-1023 (550-209476-7), CH-CCR-MW72M-1023 (550-209476-9), CH-CCR-MW73A-1023 (550-209476-11), CH-CCR-MW74M-1023 (550-209476-13), CH-CCR-MW77A-1023 (550-209476-15), CH-CCR-W301-1023 (550-209476-17) and CH-CCR-W303-1023 (550-209476-19)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Field Service / Mobile Lab

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Method SM 2540C: Constant weight was not achieved after 3 drying cycles for the following sample: CH-CCR-MW72M-1023 (550-209476-9).

Method SM 5310B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 550-310867 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.

Metals

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

Job Narrative 550-209609-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 10/25/2023 1:44 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.1°C, 1.4°C, 1.6°C and 3.2°C

HPLC/IC

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 200.8_CWA_LL: Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following samples: CH-CCR-MW78A-1023 (550-209609-1), CH-CCR-MW78A-1023 (550-209609-2), CH-CCR-BAPTD-1023 (550-209609-3), CH-CCR-BAPTD-1023 (550-209609-4), CH-CCR-Petroglyph-1023 (550-209609-5), CH-CCR-Petroglyph-1023 (550-209609-6), CH-CCR-TannerWash-1023 (550-209609-7), CH-CCR-TannerWash-1023 (550-209609-8), CH-CCR-TWX3-1023 (550-209609-9), CH-CCR-TWX3-1023 (550-209609-10), (550-209609-F-1-A MS) and (550-209609-F-1-B MSD).

Method 200.8_CWA_LL: Due to sample matrix effect on the internal standard (ISTD), a dilution was required for the following samples: CH-CCR-MW78A-1023 (550-209609-1), CH-CCR-TWX5-1023 (550-209609-11), CH-CCR-TWX5-1023 (550-209609-12), CH-CCR-TWX7-1023 (550-209609-13), CH-CCR-TWX7-1023 (550-209609-14), CH-CCR-TWX9-1023 (550-209609-15), CH-CCR-TWX9-1023 (550-209609-16), CH-CCR-TWX10-1023 (550-209609-17), CH-CCR-TWX10-1023 (550-209609-18), CH-CCR-EB01-1023 (550-209609-19), CH-CCR-EB01-1023 (550-209609-20), (550-209609-F-1-A MS ^5) and (550-209609-F-1-B MSD ^5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method SM5310_DOC_B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 550-310867 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
 Project/Site: CCR Groundwater Monitoring

Job ID: 550-209609-1
 SDG: APS Cholla Power Plant (BAP)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Calscience

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0830	11-16-23
California	SCAQMD LAP	17LA0919	11-30-23

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte, & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Is the Field Sampler's name present on COC?	N/A	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A	

ANALYTICAL REPORT

PREPARED FOR

Attn: Natalie Chrisman
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Generated 12/22/2023 11:43:41 AM

JOB DESCRIPTION

CCR Groundwater Monitoring

JOB NUMBER

550-210901-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Case Narrative

Client: Arizona Public Service Company
Project: CCR Groundwater Monitoring

Job ID: 550-210901-1

Job ID: 550-210901-1

Eurofins Phoenix

Job Narrative 550-210901-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 11/22/2023 9:14 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.8°C

Subcontract Work

Methods DOC (Field Filtered), Total Organic Carbon: These methods were subcontracted to Legend Technical Services of Arizona Inc. The subcontract laboratory certifications are different from that of the facility issuing the final report. The subcontract report is appended in its entirety.

HPLC/IC

Method 300_ORGFMS: The following sample was diluted due to the nature of the sample matrix: CH-CCR-W305-1023 (550-210901-1). Elevated reporting limits (RLs) are provided. The following samples require a 2x dilution in order to preserve instrumentation.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

RE: TOC

Laboratory Work Order No.: 23L1173

Legend Technical Services of Arizona, Inc. is pleased to provide the enclosed analytical results for the aforementioned project. These results relate only to the items tested. This cover letter and the accompanying pages represent the full report for these analyses and should only be reproduced in full. Samples for this project were received by the laboratory on 12/08/23 09:16.

The samples were processed in accordance with the Chain of Custody document and the results presented relate only to the samples tested. The Chain of Custody is considered part of this report.

All samples will be retained by LEGEND for 30 days from the date of this report and then discarded unless other arrangements are made. Due to hold-time and method sample volume requirements, microbiological samples are not retained unless other arrangements are made.

This entire report was reviewed and approved for release by the undersigned. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

LEGEND TECHNICAL SERVICES OF ARIZONA, INC.

Victoria B. Beckley
Client Services Representative

This laboratory report is confidential and is intended for the sole use of LEGEND and its client.

Sample Condition Upon Receipt:

Temperature: 0.10 C

All samples were received in acceptable condition unless noted otherwise in the case narrative.

Case Narrative:

Holding Times: All holding times were met unless otherwise qualified.

QA/QC Criteria: All analyses met method requirements unless otherwise qualified.

Certifications: AZ(PHX)0004, AZ(TUC)0004, AIHA#102982, CDC ELITE Member.

Accreditation is applicable only to the test methods specified on each scope of accreditation held by LEGEND.

Comments: There were no problems encountered during the processing of the samples, unless otherwise noted.
All samples were analyzed on a "wet" basis unless designated as "dry weight".

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/test/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

ANALYTICAL REPORT

PREPARED FOR

Attn: Natalie Chrisman
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Generated 12/14/2023 9:25:39 AM

JOB DESCRIPTION

CCR Groundwater Monitoring
APS Cholla Power Plant (BAM)

JOB NUMBER

550-210926-1

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
H1	Sample analysis performed past holding time.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Job ID: 550-210926-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative 550-210926-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method. Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 11/22/2023 9:11 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 2.8°C

HPLC/IC

Method 300_ORGFMS: Due to the high concentration of sulfate and chloride the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 550-312596 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

1 INTRODUCTION

Arizona Public Service (APS) collected groundwater Detection and Assessment Monitoring samples to support Coal Combustion Residuals (CCR) Rule Compliance during the 2023 calendar year (the reporting period) at the APS Cholla Power Plant, located near Joseph City in Navajo County, Arizona. This report presents the standard methods used to validate reporting period data and documents the results of the data validation process in summary tables and checklists generated as the samples were collected throughout the year.

2 DATA VALIDATION METHODOLOGY

WSP USA Environment & Infrastructure Inc (WSP) (previously Wood Environment & Infrastructure Solutions, Inc. [Wood]) performed a United States Environmental Protection Agency (EPA) Stage 2A validation on samples collected by APS during the 2023 calendar year. This is equivalent to a Level I data evaluation as defined in the project sampling and analysis plan (SAP). The Stage 2A validation includes review of the quality control (QC) results in laboratory analytical reports and does not include review or validation of the raw analytical data. Data validation activities have been performed in general accordance with:

- EPA, 2004. SW 846 Test Methods for Evaluating Solid Wastes, Update IIIB.
- EPA, 2017. EPA Contract Laboratory Program (CLP) National Functional Guidelines for Inorganic Superfund Data Review, EPA 540-R-2017-001.
- Wood Environment & Infrastructure Solutions, Inc, 2022. Groundwater Sampling and Analysis Program, Cholla Power Plant, Joseph City, Arizona. April 11, 2022.

The CLP guidelines were written specifically for the CLP and have been modified for the purposes of data reviews conducted during the reporting period where they differ from method-specific QC requirements.

During each groundwater monitoring round conducted during the reporting period, the laboratory's certified analytical report and supporting documentation were reviewed to assess the following:

- Data package and electronic data deliverable completeness;
- Chain of custody (COC) compliance;
- Holding time compliance;
- Presence or absence of laboratory contamination as demonstrated by laboratory blanks;
- Accuracy and bias as demonstrated by recovery of laboratory control sample (LCS) and matrix spike (MS) samples;
- Analytical precision as relative percent difference (RPD) of analyte concentration between laboratory duplicates, LCS/LCS duplicates (LCSDs), or MSs/MS duplicates (MSDs);
- Insofar as possible, the degree of conformance to method requirements and good laboratory practices.

Appendix A presents data assessment checklists generated for each sample delivery group submitted to the analytical laboratory during the reporting period. The laboratory performing the analyses as well as the methods of analysis are presented in the individual checklists. **Table 1** presents a comprehensive listing of reporting period samples and **Table 2** summarizes field duplicate detections at concentrations greater than analytical reporting limits.

In general, it is important to recognize that no analytical data are guaranteed to be correct, even if all QC audits are passed. Strict QC serves to increase confidence in data, but any reported value may potentially contain error.

3 EXPLANATION OF DATA QUALITY INDICATORS

Summary explanations of the specific data quality indicators reviewed during data validation are presented below.

3.1 LABORATORY CONTROL SAMPLE RECOVERIES

Laboratory Control Samples (LCSs) are aliquots of analyte free matrices that are spiked with the analytes of interest for an analytical method, or a representative subset of those analytes. The spiked matrix is then processed through the same analytical procedures as the samples it accompanies. LCS recovery is an indication of a laboratory's ability to successfully perform an analytical method in an interference free matrix.

3.2 MATRIX SPIKE RECOVERIES

Matrix Spikes (MSs) and Matrix Spike Duplicates (MSDs) are prepared by adding known amounts of the analytes of interest for an analytical method, or a representative subset of those analytes, to an aliquot of sample. The spiked sample is then processed through the same extraction, concentration, cleanup, and analytical procedures as the unspiked samples in an analytical batch.

MS recovery and precision are an indication of a laboratory's ability to successfully recover an analyte in the matrix of a specific sample or closely related sample matrices. It is important not to apply MS results for any specific sample to other samples without understanding how the sample matrices are related.

3.3 BLANK CONCENTRATIONS

Blank samples are aliquots of analyte free matrix that are used as negative controls to verify that the sample collection, storage, preparation, and analysis system does not produce false positive results.

Laboratory blanks are processed by the laboratory using exactly the same procedures as the field samples. Target analytes should not be found in laboratory blanks.

When target analytes are detected in blanks, analyte concentrations in associated samples less than five times the concentration detected in the blank will be U qualified as being not detected.

3.4 LABORATORY DUPLICATES

Laboratory duplicate analysis verifies acceptable method precision by the laboratory at the time of preparation and analysis and/or sampling precision at the time of collection.

4 DEFINITIONS OF DATA VALIDATION QUALIFIERS

The following qualifiers may be added to the data during data validation:

- J** The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- R** The sample result is rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
- UJ** The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

5 CHAIN OF CUSTODY AND SAMPLE RECEIPT CONDITION DOCUMENTATION

Unless otherwise noted in the Data Assessment Checklists included in **Appendix A**, the samples were received at the laboratories under proper COC, intact, properly preserved, and at temperatures less than the SAP-specified maximum of 6 degrees Celsius.

6 SPECIFIC DATA VALIDATION FINDINGS

Results for groundwater monitoring samples collected in 2023 may be considered usable with the limitations and exceptions summarized in **Table 3**. The following sections identify requirements used in data assessment. Laboratory-specified limits are noted on the Data Assessment Checklists included in **Appendix A**.

6.1 METALS BY EPA METHODS 200.7 200.8, AND 245.1

6.1.1 HOLDING TIMES

Samples must be analyzed for metals within the SAP-specified holding time of 28 days for mercury and 180 days for additional metals.

6.1.2 LABORATORY BLANKS

Target analytes must not be detected in the laboratory blanks associated with the analysis of site samples.

6.1.3 LABORATORY CONTROL SAMPLE ACCURACY AND PRECISION

LCS and LCSD recoveries must be within the laboratory-specified limits and RPDs between the LCS and LCSD results must be less than the laboratory-specified maximum.

6.1.4 MATRIX SPIKES/MATRIX SPIKE DUPLICATES

Laboratories performed MS and MSD analysis on the project samples specified in the Data Assessment Checklists included in **Appendix A**. MS/MSD recoveries must be within laboratory-specified limits and RPDs between MS and MSD results must be less than the laboratory-specified maximum.

6.1.5 ANALYTICAL SENSITIVITY

RLs for antimony, arsenic, barium, beryllium, cadmium, chromium, mercury, selenium, and thallium must be sufficiently low to meet the National Primary Drinking Water Regulation Maximum Contamination Limits (MCLs). RLs for cobalt, lead, lithium, and molybdenum must be sufficiently low to meet alternative Groundwater Protection Standards (GWPSs).

Boron and calcium are not EPA-regulated analytes in groundwater and it is not possible to evaluate the RLs for these analytes against the National Primary Drinking Water Regulation MCLs.

6.2 ANIONS BY EPA METHOD 300.0

6.2.1 HOLDING TIMES

Samples must be analyzed for anions within the SAP-specified holding time of 28 days.

6.2.2 LABORATORY BLANKS

Fluoride, chloride, and sulfate must not be detected in the laboratory blanks associated with the analysis of these samples.

6.2.3 LABORATORY CONTROL SAMPLE ACCURACY AND PRECISION

LCS and LCSD recoveries must be within the laboratory-specified limits and RPDs between the LCS and LCSD results must be less than the laboratory-specified maximum values.

6.2.4 MATRIX SPIKES/MATRIX SPIKE DUPLICATES

Laboratories performed MS and MSD analysis on the project samples specified in the Data Assessment Checklists included in **Appendix A**. Recoveries must be within the laboratory-specified limits and RPDs between MS and MSD results must be less than the laboratory-specified limit.

6.2.5 LABORATORY DUPLICATES

Laboratories performed duplicate analysis on the project samples specified in the Data Assessment Checklists included in **Appendix A**. The RPDs between duplicate results must be less than the laboratory-specified limit.

6.2.6 ANALYTICAL SENSITIVITY

Fluoride RLs must be sufficiently low to meet the 4 mg/L MCL. Chloride and sulfate are not EPA-regulated analytes in groundwater and it is not possible to evaluate the RLs for these analytes against the Primary Drinking Water Regulation MCLs.

There are applicable CCR Groundwater Monitoring Program Background Threshold Values (BTVs) for fluoride, chloride, and sulfate for the site. Analytical sensitivity must also be evaluated for these site-specific comparison criteria.

6.3 TOTAL DISSOLVED SOLIDS BY SM 2540C

6.3.1 HOLDING TIMES

All samples must be analyzed for TDS within the SAP-specified holding time of 7 days.

6.3.2 LABORATORY BLANKS

TDS must not be detected in the laboratory blanks at concentrations above the reporting limit.

6.3.3 LABORATORY CONTROL SAMPLE ACCURACY AND PRECISION

LCS and LCSD recoveries must be within the laboratory-specified limits and RPDs between the LCS and LCSD results must be less than the laboratory-specified maximum values.

6.3.4 LABORATORY DUPLICATES

Laboratories performed duplicate analysis for TDS on the project samples specified in the Data Assessment Checklists included in **Appendix A**. RPDs between primary sample and laboratory duplicate results must be less than the laboratory-specified limit.

6.4 PH BY SM 4500B

6.4.1 HOLDING TIMES

All samples must be analyzed for pH within 15 minutes of sample collection.

6.4.2 LABORATORY CONTROL SAMPLE ACCURACY AND PRECISION

LCS recoveries must be within the laboratory-specified limits.

6.4.3 LABORATORY DUPLICATES

Laboratories performed duplicate analysis for pH on the project samples specified in the Data Assessment Checklists included in **Appendix A**. RPDs between primary sample and laboratory duplicate results must be less than the laboratory-specified limit.

6.5 GENERAL CHEMISTRY BY EPA METHOD 350.1, SM 2320B, AND S 5310B

6.5.1 HOLDING TIMES

Samples must be analyzed for ammonia, total organic carbon (TOC), and dissolved organic carbon (DOC) within 28 days of sample collection. Samples must be analyzed for alkalinity within 14 days of sample collection.

6.5.2 LABORATORY CONTROL SAMPLE ACCURACY AND PRECISION

6.5.3 LABORATORY DUPLICATES

Laboratories performed duplicate analysis on the project samples specified in the Data Assessment Checklists included in **Appendix A**. RPDs between primary sample and laboratory duplicate results must be less than the laboratory-specified limit.

6.6 RADIUM BY EPA METHODS 903.0 AND 904.0

6.6.1 HOLDING TIME

All samples must be analyzed for radium within the EPA-recommended holding time of 6 months.

6.6.2 LABORATORY BLANKS

6.6.3 LABORATORY CONTROL SAMPLE ACCURACY AND PRECISION

LCS and LCSD recoveries must be within laboratory-specified limits.

6.6.4 CARRIER ACCURACY

Carrier recoveries must be within the laboratory-specified limits.

6.6.5 ANALYTICAL SENSITIVITY

Total radium RLs must be sufficiently low to meet the MCL of 5 picocuries per liter. Pending development of applicable CCR Groundwater Monitoring Program BTVs and/or GPSs for the site, analytical sensitivity must also be evaluated for these site-specific comparison criteria.

7 FIELD DUPLICATES

APS collected field duplicate samples of the specified field original samples as specified in **Table 1**. Target analyte detections are summarized in **Table 2**. Precision values must be less than the SAP-specified maximum of 20%, or the differences between the detected concentrations must be less than the RLs.

8 SUMMARY AND CONCLUSIONS

Data are usable with the addition of qualifiers as presented in **Table 3**. Although the overall amount of qualified data decreased by approximately 23% from the 2022 reporting period, a considerable amount of groundwater sampling data assessed during the reporting period still required data qualifiers. The vast majority of these qualifiers were for holding time exceedances for pH, which is monitored in the field during sample collection. However, significantly more data included a J-qualifier for high laboratory control sample recoveries in 2023 when compared to past sampling events. Approximately 39 2023 analytical results included a J-qualifier for high laboratory control sample recoveries in 2023 and no data included a J-qualifier for this same reason in 2022.

TABLE 3
QUALIFIERS ADDED DURING DATA VALIDATION
Coal Combustion Residuals Rule
2023 Compliance Monitoring Groundwater Data

Sample Identification	Sample Delivery Group	Method	Analyte	Result	Qualifier and Reason Code
CH-CCR-FD05-1023	J210925	SM 4500HB	pH	7.1 SU	J HT
CH-CCR-W305-1023	J210901	EPA 200.8	Barium	0.012 mg/L	J HD
CH-CCR-W305-1023	J210901	SM 4500HB	pH	7.4 SU	J HT
CH-CCR-TWX6-1023	J210901	SM 4500HB	pH	7.5 SU	J HT

Notes:

mg/L = milligrams per liter

pCi/L = picocurie per liter

SU = standard pH unit

Qualifier Definitions:

J = The Result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

R = The Result is rejected due to serious deficiencies in meeting QC criteria.

U = The analyte was analyzed for, but was not detected.

Reason Codes:

DL = The detected concentration is less than the reporting limit.

FD = Imprecision between primary and field duplicate Results.

HD = Imprecision between primary and laboratory duplicate Results.

HL = High laboratory control sample recovery. Result may be biased high.

HM = High matrix spike recovery. Result may be biased high.

HT = The method-specified maximum hold time was exceeded.

LM = Low matrix spike recovery. Result may be biased low.

MB = The concentration detected in the sample was less than five times the concentration detected in the associated laboratory blank.

RT = Elevated receipt temperature.

TD = Dissolved concentration is significantly higher than the total concentration.

Analytical Methods:

Analyte	Analyte Group	Method
Chloride, Fluoride, Sulfate	Anions	EPA 300.0
Beryllium, Boron, Calcium, Lithium, Iron, Magnesium, Manganese, Potassium, Sodium	Metals	EPA 200.7
Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium	Metals	EPA 200.8
Mercury	Metals	EPA 245.1
Ammonia	General Chemistry	EPA 350.1
Nitrate/Nitrite	Anions	EPA 353.2
Alkalinity	General Chemistry	SM 2320B
Total Dissolved Solids (TDS)	General Chemistry	SM 2540C
pH	General Chemistry	SM 4500H+B
Dissolved Organic Carbon (DOC)	General Chemistry	SM 5310B

Cholla CCR Data Review

Qualifier Definitions:

- J** The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- R** The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- U** The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- UJ** The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Cholla CCR Data Review

6. Target analytes detected in the blanks?

Yes No N/A

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection	Effect on Data Usability
Selenium	0.00104 mg/L	CH-CCR-M51A-0423 CH-CCR-MW72M-0423 CH-CCR-MW73A-0423	J-MB
Barium	0.000261 mg/L	None	None
Antimony	0.000054 mg/L	CH-CCR-M50A-0423 CH-CCR-M53A-0423 CH-CCR-M55A-0423 CH-CCR-MW69A-0423 CH-CCR-MW70M-0423 CH-CCR-MW71A-0423 CH-CCR-MW72M-0423 CH-CCR-MW73A-0423 CH-CCR-MW74M-0423 CH-CCR-W301-0423 CH-CCR-W303-0423 CH-CCR-W306-0423 CH-CCR-W308-0423	J-MB

Note:

MB = The analyte was detected in the sample at a concentration less than five times the concentration detected in the blank, corrected for sample dilution.

7. LCS recoveries within laboratory-specified limits?

Yes No N/A

If No:

Analyte	Recovery	QC Limits	Affected Samples	Effect on Data Usability

8. MS performed on a project-specific sample?

Yes No N/A

If Yes:

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-M53A-0423	Antimony, arsenic, barium, cadmium, chromium, cobalt, lead, molybdenum, selenium, thallium
CH-CCR-M55A-0423	Nitrate/nitrite
CH-CCR-M64A-0423	Lithium
CH-CCR-MW52A-0423	Ammonia, beryllium, boron, calcium, iron, lithium, magnesium, manganese, potassium, sodium, DOC

Cholla CCR Data Review

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-MW72M-0423	Chloride
CH-CCR-W303-0423	Ammonia
CH-CCR-W306-0423	Dissolved arsenic, dissolved cobalt
CH-CCR-W308-0423	Nitrate/nitrite

a. Are MS recoveries and/or precision within laboratory-specified limits?

Yes No N/A

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability
CH-CCR-M52A-0423	Ammonia	87%, MS	90-110%	UJ-LM
CH-CCR-M52A-0423	Potassium	151%, 133%	70-130%	J-HM
CH-CCR-M53A-0423	Selenium	58% MSD, 34% RPD	70-130%, 20% RPD	UJ-LM, None
CH-CCR-W303-0423	Ammonia	88%, MSD	90-110%	UJ-LM
CH-CCR-MW52A-0423	Calcium	9%, 8%	70-130%	NA4
CH-CCR-MW52A-0423	Iron	52%, MSD	70-130%	NA4
CH-CCR-MW52A-0423	Iron, dissolved	5%, -9%	70-130%	NA4
CH-CCR-MW52A-0423	Magnesium	40%, MSD	70-130%	NA4
CH-CCR-MW52A-0423	Sodium	-230%, -407%	70-130%	NA4

Note:

HM = High matrix spike recovery.

LM = Low matrix spike recovery.

NA4 = The concentration detected in the unspiked native sample is more than four times the spike concentration and it is not possible to assess data usability based on the MS recovery.

9. Field duplicate collected?

Yes No

If Yes:

Parent Sample	Field Duplicate

a. Are RPDs between primary and duplicate results $\leq 20\%$ or are differences between analyte concentrations \leq the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability

Cholla CCR Data Review

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes
 No
 N/A

If Yes:

Sample ID	Analysis
CH-CCR-W303-0423	Alkalinity
CH-CCR-MW74M-0423	Alkalinity
CH-CCR-M55A-0423	TDS
CH-CCR-MW69A-0423	pH
CH-CCR-W309-0423	pH

a. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes
 No
 N/A

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are total concentrations greater than dissolved concentrations or do total and dissolved results meet criteria for duplicate analyses?

Yes
 No
 N/A

If No:

Sample ID	Analyte	Total Concentration (mg/L)	Dissolved Concentration (mg/L)	Effect on Data Usability

12. Other Quality Control Issues?

Yes
 No

If yes:

According to the case narrative, beryllium and sodium recoveries were high in the continuing calibration verification (CCV) associated with the analysis of samples CH-CCR-M52A-0423, CH-CCR-M53A-0423, CH-CCR-M55A-0423, CH-CCR-MW69A-0423, CH-CCR-MW70M-0423, CH-CCR-MW71A-0423, CH-CCR-MW73A-0423, CH-CCR-MW74M-0423, CH-CCR-W301-0423, CH-CCR-W303-0423, CH-CCR-W306-0423, CH-CCR-W308-0423, CH-CCR-W309-0423, CH-CCR-W314-0423, CH-CCR-M50A-0423, CH-CCR-M51A-0423, CH-CCR-M64A-0423, CH-CCR-W123R-0423, and CH-CCR-W125-0423. Detected sodium and beryllium results were not reported from the associated analyses and data usability is not adversely affected buy the high CCV recoveries.

Laboratory Name:	Eurofins Environment Testing		
Sample Delivery Group:	J200839-1,2	Review Date:	6/12/2023
Validator's Name:	Caitlin Riechmann	Reviewed By:	Marie Bevier

Sample Summary:

Field Sample Identification	Collection Date and Time	Laboratory Sample Identification	Notes
CH-CCR-M54-0423	04/13/23 08:56	550-200839-1	
CH-CCR-M59-0423	04/12/23 11:08	550-200839-2	
CH-CCR-M61-0423	04/12/23 12:48	550-200839-3	
CH-CCR-FD01-0423	04/12/23 16:20	550-200839-4	Field duplicate of CH-CCR-M59-0423

Analytical Methods:

Analyte	Analyte Group	Method
Chloride, Fluoride, Sulfate	Anions	EPA 300.0
Boron, Calcium	Metals	EPA 200.7
Total Dissolved Solids (TDS)	General Chemistry	SM 2540C
pH	General Chemistry	SM 4500H+B

Qualifier Definitions:

- J** The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- R** The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- U** The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- UJ** The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

pH	General Chemistry	SM 4500H+B
Dissolved Organic Carbon (DOC), Total Organic Carbon (TOC)	General Chemistry	SM 5310B
Fluoride	Anions	EPA 9056A

Qualifier Definitions:

- J** The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- R** The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

Cholla CCR Data Review

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Sample Receipt Condition:

COC Signed and Complete?

Yes No

If No, provide details.

Sample Login Matched COC?

Yes No

If no, provide details.

The sample ID for sample CH-CCR-M45A-1023 was incorrectly logged by the laboratory as CH-CCR-M452-1023. For the remainder of this report, WSP refers to this sample as CH-CCR-M45A-1023.

Sample receipt temperature $\leq 6^{\circ}\text{C}$?

Yes No N/A

If no, provide details.

Other sample receipt issues?

Yes No

If yes, provide details.

Cholla CCR Data Review

1. Samples analyzed for metals and radionuclides within 180 days of sampling?

Yes No N/A

2. Samples analyzed for mercury, ammonia, chloride, fluoride, nitrate/nitrite, sulfate, TOC, and/or DOC within 28 days of sampling?

Yes No N/A

3. Samples Analyzed for alkalinity within 14 days of sampling?

Yes No N/A

4. Samples analyzed for total dissolved solids (TDS) within 7 days of sampling?

Yes No N/A

5. Samples analyzed for pH within 15 minutes of sampling?

Yes No N/A

If No:

Sample ID	Analysis	Time Between Collection and Analysis	Effect on Data Usability
CH-CCR-M43A-1023	pH	9 days, 16 hours, 51 minutes	J-HT
CH-CCR-M45A-1023	pH	8 days, 19 hours, 38 minutes	J-HT

CH-CCR-W305-1023	Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium

a. Are MS recoveries and/or precision within laboratory-specified limits?

Yes No N/A

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability
CH-CCR-W305-1023	Barium	22% RPD	20%	J-HD

Note:

HD = Imprecision between MS and MSD results.

9. Field duplicate collected?

Yes No

If Yes:

Parent Sample	Field Duplicate

a. Are RPDs between primary and duplicate results $\leq 20\%$ or are differences between analyte concentrations \leq the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes No N/A

If Yes:

Sample ID	Analysis
CH-CCR-W305-1023	pH

Cholla CCR Data Review

- a. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes No N/A

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are total concentrations greater than dissolved concentrations or do total and dissolved results meet criteria for duplicate analyses?

Yes No N/A

If No:

Sample ID	Analyte	Total Concentration (mg/L)	Dissolved Concentration (mg/L)	Effect on Data Usability

Cholla CCR Data Review

Laboratory Name:	Eurofins Environment Testing		
Sample Delivery Group:	J210925	Review Date:	12/21/2023
Validator's Name:	Marie Bevier	Reviewed By:	Zachary Carroll

Sample Summary:

Field Sample Identification	Collection Date and Time	Laboratory Sample Identification	Notes
CH-CCR-M44D-1023	11/21/23 08:46	550-210925-1	
CH-CCR-FD05-1023	11/21/23 16:20	550-210925-2	Field duplicate of CH-CCR-M44D

Analytical Methods:

Analyte	Analyte Group	Method
Chloride, Fluoride, Sulfate	Anions	EPA 300.0
Beryllium, Boron, Calcium, Lithium	Metals	EPA 200.7
Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium	Metals	EPA 200.8
Mercury	Metals	EPA 245.1
Total Dissolved Solids (TDS)	General Chemistry	SM 2540C
pH	General Chemistry	SM 4500H+B

Qualifier Definitions:

- J** The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- R** The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- U** The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- UJ** The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Dissolved Organic Carbon (DOC), Total Organic Carbon (TOC)	General Chemistry	SM 5310B

Qualifier Definitions:

- J** The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- R** The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

Cholla CCR Data Review

U The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Sample Receipt Condition:

COC Signed and Complete?

Yes No

If No, provide details.

Sample Login Matched COC?

Yes No

If no, provide details.

Sample receipt temperature $\leq 6^{\circ}\text{C}$?

Yes No N/A

If no, provide details.

Other sample receipt issues?

Yes No

If yes, provide details.

Cholla CCR Data Review

1. Samples analyzed for metals and radionuclides within 180 days of sampling?

Yes No N/A

2. Samples analyzed for mercury, ammonia, chloride, fluoride, nitrate/nitrite, sulfate, TOC, and/or DOC within 28 days of sampling?

Yes No N/A

3. Samples Analyzed for alkalinity within 14 days of sampling?

Yes No N/A

4. Samples analyzed for total dissolved solids (TDS) within 7 days of sampling?

Yes No N/A

5. Samples analyzed for pH within 15 minutes of sampling?

Yes No N/A

If No:

Sample ID	Analysis	Time Between Collection and Analysis	Effect on Data Usability
CH-CCR-M52A-1023	pH	6 days, 21 hours, 44 minutes	J-HT
CH-CCR-M55A-1023	pH	6 days, 3 hours, 39 minutes	J-HT
CH-CCR-MW79A-1023	pH	5 days, 3 hours, 9 minutes	J-HT
CH-CCR-FD02-1023	pH	4 days, 22 hours, 36 minutes	J-HT
CH-CCR-W302-1023	pH	5 days, 22 hours, 7 minutes	J-HT
CH-CCR-W304-1023	pH	5 days, 23 hours, 49 minutes	J-HT
CH-CCR-W307R-1023	pH	6 days, 1 hour, 8 minutes	J-HT
CH-CCR-W308-1023	pH	6 days, 2 hours, 46 minutes	J-HT
CH-CCR-W309-1023	pH	6 days, 4 hours, 56 minutes	J-HT
CH-CCR-W317-1023	pH	7 days, 4 hours, 8 minutes	J-HT
CH-CCR-FD03-1023	pH	5 days, 22 hours, 0 minutes	J-HT
CH-CCR-FD04-1023	pH	6 days, 22 hours, 11 minutes	J-HT
CH-CCR-BAP-1023	pH	5 days, 4 hours, 32 minutes	J-HT

Note:

HT = Holding time exceeded.

Cholla CCR Data Review

6. Target analytes detected in the blanks?

Yes No N/A

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection	Effect on Data Usability
Beryllium	0.00176 mg/L	None	None

7. LCS recoveries within laboratory-specified limits?

Yes No N/A

If No:

Analyte	Recovery	QC Limits	Affected Samples	Effect on Data Usability

8. MS performed on a project-specific sample?

Yes No N/A

If Yes:

Spiked Sample ID	Spiked Analyte(s)
CH-CCR-W317-1023	Fluoride, Beryllium, Boron, Calcium, Lithium, Antimony, Arsenic, Barium, Cadmium, Chromium, Cobalt, Lead, Molybdenum, Selenium, Thallium, Mercury
CH-CCR-W309-1023	Mercury
CH-CCR-M52A-1023	Ammonia

a. Are MS recoveries and/or precision within laboratory-specified limits?

Yes No N/A

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability
CH-CCR-W317-1023	Calcium	47%, 39%	70-130%	NA4

Note:

NA4 = The concentration detected in the unspiked native sample is more than four times the spike concentration and it is not possible to assess data usability based on the MS recovery.

Cholla CCR Data Review

9. Field duplicate collected?

Yes No

If Yes:

Parent Sample	Field Duplicate
CH-CCR-MW79A-1023	CH-CCR-FD02-1023
CH-CCR-W307R-1023	CH-CCR-FD03-1023
CH-CCR-W317-1023	CH-CCR-FD04-1023

a. Are RPDs between primary and duplicate results \leq 20% or are differences between analyte concentrations \leq the reporting limit?

Yes No N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability
CH-CCR-W317-1023	CH-CCR-FD04-1023	Chloride	181%	J-FD
CH-CCR-W317-1023	CH-CCR-FD04-1023	Sulfate	181%	J-FD

Note:

FD = Imprecision between primary and field duplicate results.

Cholla CCR Data Review

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes
 No
 N/A

If Yes:

Sample ID	Analysis
CH-CCR-MW79A-1023	Alkalinity
CH-CCR-W317-1023	TDS, pH

a. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes
 No
 N/A

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are total concentrations greater than dissolved concentrations or do total and dissolved results meet criteria for duplicate analyses?

Yes
 No
 N/A

If No:

Sample ID	Analyte	Total Concentration (mg/L)	Dissolved Concentration (mg/L)	Effect on Data Usability

Cholla CCR Data Review

12. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes
 No
 N/A

Analytical Methods:

Analyte	Analyte Group	Method
Radium 226, Radium 228, Total Radium	Radionuclides	HPGE

Qualifier Definitions:

- J** The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- R** The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.
- U** The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- UJ** The analyte was analyzed for, but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Cholla CCR Data Review

Sample Receipt Condition:

COC Signed and Complete?

Yes

No

If No, provide details.

Sample Login Matched COC?

Yes

No

If no, provide details.

Sample receipt temperature $\leq 6^{\circ}\text{C}$?

Yes

No

N/A

If no, provide details.

Cholla CCR Data Review

1. Samples analyzed for metals and radionuclides within 180 days of sampling?

Yes No N/A

2. Samples analyzed for mercury, ammonia, chloride, fluoride, nitrate/nitrite, sulfate, TOC, and/or DOC within 28 days of sampling?

Yes No N/A

3. Samples Analyzed for alkalinity within 14 days of sampling?

Yes No N/A

4. Samples analyzed for total dissolved solids within 7 days of sampling?

Yes No N/A

5. Samples analyzed for pH within 15 minutes of sampling?

Yes No N/A

If No:

Sample ID	Analysis	Time Between Collection and Analysis	Effect on Data Usability

6. Target analytes detected in the blanks?

Yes No N/A

If Yes:

Detected Analyte	Concentration	Samples with concentrations less than 5 times the blank detection	Effect on Data Usability

7. LCS recoveries within laboratory-specified limits?

Yes No N/A

If No:

Analyte	Recovery	QC Limits	Affected Samples	Effect on Data Usability

Cholla CCR Data Review

8. MS performed on a project-specific sample?

Yes

No

N/A

If Yes:

Spiked Sample ID	Spiked Analyte(s)

a. Are MS recoveries and/or precision within laboratory specified limits?

Yes

No

N/A

If No:

Sample ID	Analyte	RPD or Recovery	Accuracy or Recovery Limits	Effect on Data Usability

9. Field duplicate collected?

Yes

No

If Yes:

Parent Sample	Field Duplicate

b. Are RPDs between primary and duplicate results \leq 20% or are differences between analyte concentrations \leq the reporting limit?

Yes

No

N/A

If No:

Primary Sample ID	Duplicate Sample ID	Analyte	RPD	Effect on Data Usability

10. Did the laboratory perform duplicate analyses on project-specific samples?

Yes

No

N/A

If Yes:

Sample ID	Analysis

c. Is the RPD between duplicate results within laboratory-specified limits or is the difference between analyte concentrations less than the reporting limit?

Yes

No

N/A

Cholla CCR Data Review

If No:

Sample ID	Analyte	Effect on Data Usability

11. Are non-detect results sufficiently low to meet EPA primary drinking water criteria?

Yes No

Notes:												
BTV exceedances are shown in grey shaded cells. GWPS exceedance are shown in red text.												
Duplicate sample dates under the same location are either field duplicates or are instances of samples with multiple field/lab sample IDs on the same date.												
Abbreviations and Data Qualifiers:												
< = less than												
BTV = Background Threshold Value												
CCR = Coal Combustion Residual												
degrees C = degrees Celsius												
FAP = Fly Ash Pond												
GWPS = Groundwater Protection Standard												
ID = Identification												
J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.												
mg/L = milligrams per liter												
pCi/L = Picocuries per liter												
R = rejected												
su = standard units												
U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.												
UJ = The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes:
 BTW exceedances are shown in grey shaded cells. GWPS exceedance are shown in red text.
 Duplicate sample dates under the same location are either field duplicates or are instances of samples with multiple field/sample IDs on the same date.

Abbreviations and Data Qualifiers:

- < = less than
- BTW = Background Threshold Value
- CCR = Coal Combustion Residual
- degrees C = degrees Celsius
- FAP = Fly Ash Pond
- GWPS = Groundwater Protection Standard
- ID = Identification
- J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- mg/L = milligrams per liter
- pCi/L = PicoCuries per liter
- R = rejected
- su = standard units
- U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- UJ = The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes:
 BTV exceedances are shown in grey shaded cells. GWPS exceedance are shown in red text.
 Duplicate sample dates under the same location are either field duplicates or are instances of samples with multiple field/lab sample IDs on the same date.

Abbreviations and Data Qualifiers:

- < = less than
- BTV = Background Threshold Value
- CCR = Coal Combustion Residual
- degrees C = degrees Celsius
- FAP = Fly Ash Pond
- GWPS = Groundwater Protection Standard
- ID = Identification
- J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- mg/L = milligrams per liter
- pCi/L = PicoCuries per liter
- R = rejected
- su = standard units
- U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- UJ = The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes:

BTV exceedances are shown in grey shaded cells. GWPS exceedance are shown in red text.

Duplicate sample dates under the same location are either field duplicates or are instances of samples with multiple field/lab sample IDs on the same date.

¹ In previous documents TDX-3 is also known as BSX-01, TDX-4 is also known as BSX-02, and TDX-5 is also known as BSX-03.

Abbreviations and Data Qualifiers:

< = less than

BAP = Bottom Ash Pond

BTV = Background Threshold Value

CCR - Coal Combustion Residual

degrees C = degrees Celsius

GWPS = Groundwater Protection Standard

ID = Identification

J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

mg/L = milligrams per liter

pCi/L = Picocuries per liter

su = standard units

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes:
 BTV exceedances are shown in grey shaded cells. GWPS exceedance are shown in red text.
 Duplicate sample dates under the same location are either field duplicates or are instances of samples with multiple field/lab sample IDs on the same date.
 * In previous documents TD3-3 is also known as BSX-01, TD3-4 is also known as BSX-02, and TD3-5 is also known as BSX-03.

Abbreviations and Data Qualifiers:
 < = less than
 BAP = Bottom Ash Pond
 BTV = Background Threshold Value
 CCR - Coal Combustion Residual
 degrees C = degrees Celsius
 GWPS = Groundwater Protection Standard
 ID = Identification
 J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 mg/L = milligrams per liter
 pCi/L = Picocuries per liter
 su = standard units
 U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
 UJ = The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes:

Duplicate sample dates under the same location are either field duplicates or are instances of samples with multiple field/lab sample IDs on the same date.

Abbreviations and Data Qualifiers:

< = less than

BAP = Bottom Ash Pond

BTV = Background Threshold Value

CCR - Coal Combustion Residual

degrees C = degrees Celsius

FAP = Fly Ash Pond

GWPS = Groundwater Protection Standard

ID = Identification

J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

mg/L = milligrams per liter

pCi/L = Picocuries per liter

su = standard units

U = The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.

UJ = The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.

Notes:

BTV exceedances are shown in grey shaded cells.

Duplicate sample dates under the same locations are either field duplicates or are instances of samples with multiple filed/lab sample IDs on the same date.

*Fluoride BTV for M-60 is 1.7 mg/L

**Fluoride BTV for M-61 is 1.6 mg/L

Abbreviations and Data Qualifiers:

< = less than

BTV = Background Threshold Value

CCR = Coal Combustion Residual

ID = Identification

J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.

mg/L = milligrams per liter

pCi/L = Picocuries per liter

su = standard units

Notes:
 BTV exceedances are shown in grey shaded cells.
 Duplicate sample dates under the same locations are either field duplicates or are instances of samples with multiple filed/lab sample IDs on the same date.
 *Fluoride BTV for M-60 is 1.7 mg/L
 **Fluoride BTV for M-61 is 1.6 mg/L

Abbreviations and Data Qualifiers:
 < = less than
 BTV = Background Threshold Value
 CCR = Coal Combustion Residual
 ID = Identification
 J = The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
 mg/L = milligrams per liter
 pCi/L = Picocuries per liter
 su = standard units

Re: **CCR GROUNDWATER DETECTION MONITORING
STATISTICAL ANALYSIS AND RESULTS FOR THE BOTTOM ASH MONOFILL
APPENDIX III CONSTITUENT DATA COLLECTED THROUGH JANUARY 2023
Arizona Public Service Company Cholla Power Plant - Navajo County, Arizona**

Please be advised that, effective September 21, 2022, Wood Environment & Infrastructure Solutions, Inc. was acquired by WSP. due to the acquisition, we have changed our name to WSP USA Environment & Infrastructure Inc. no other aspects of our legal entity or capabilities have changed for this report, including our Federal Tax ID which remains 91-1641772. Correspondence for this technical memorandum should continue to be addressed to the individuals listed above.

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) presents the results of a statistical evaluation of groundwater monitoring data collected from monitoring wells downgradient of the Bottom Ash Monofill (BAM) located at the Arizona Public Service Company (APS) Cholla Power Plant (Site) in Navajo County, Arizona. The statistical evaluation was performed by Geosciences Consulting LLC (Geosciences Consulting), a subcontractor to WSP USA Environment and Infrastructure, Inc. (WSP) pursuant to Coal Combustion Residuals (CCR) Rule requirements for groundwater monitoring and corrective action detailed in 40 Code of Federal Regulations Sections 257.90 through 257.98 (CCR Rule) (Federal Register, 2020).

The BAM is a Site CCR unit that is currently in the detection monitoring program. The CCR Rule requires semi-annual evaluations of Appendix III constituent data collected from BAM downgradient wells on an ongoing basis to determine if a statistically significant increase (SSI) over background threshold values (BTVs) has occurred. The statistical evaluation documented herein incorporates Appendix III constituent data collected from BAM downgradient wells MW-59, MW-60, and MW-61 and BAM background well M-54 during the October 2022 semi-annual sampling event and a January 2023 resampling event. The BAM detection monitoring program consists of eleven (11) sampling rounds starting in November 2017.

To address an initial exceedance of the sulfate BTV at MW-60 in October 2022, in accordance with the Statistical Data Analysis Workplan (SDAWP) (WSP, 2023) developed for the Site and the U.S. EPA's Unified Guidance (USEPA 2009), resampling was implemented in January 2023. The detection results for sulfate at MW-60 of the resampling event fell under the associated BTV, and therefore the initial October 2022 exceedance is determined to be statistically insignificant. Details of the results of the statistical evaluation are presented in Section 2.0.

2.0 STATISTICAL EVALUATION RESULTS

Attachment A presents the statistical evaluation conducted by Geosciences Consulting. The results of the evaluation are summarized as follows:

- In October 2022, sulfate was detected at a concentration of 400 milligrams per liter (mg/L) at MW-60, which is above the BTV of 380 mg/L; but was detected at a concentration of 380 mg/L in January 2023. Therefore, the initial exceedance is statistically insignificant.
- There are currently no SSIs over BTVs for Appendix III constituents at the BAM downgradient wells.
- A statistically significant decreasing temporal trend is evident for concentrations of chloride at MW-59, concentrations of boron and calcium at MW-60, and concentrations of boron at MW-61. A statistically significant increasing temporal trend is evident for concentrations of fluoride at MW-59.

3.0 RECOMMENDATIONS

Based on the results of the statistical evaluation presented in **Attachment A** and pursuant to the CCR Rule, continuation of detection monitoring at a semi-annual frequency for Appendix III constituents at the BAM is warranted because there are currently no SSIs over Appendix III constituent BTVs. WSP also recommends trend testing after each monitoring event and updates to the BTVs after 1-2 years of future sampling events.

The BAM SDAWP recommends updating BTVs every couple of years. There are several Appendix III constituents in background well M-54 (**Attachment A**), including chloride and sulfate, that exhibit concentrations in exceedance of their respective BTVs (Table 1 of **Attachment A**) in recent years. This is one indication that the BTVs need updating to assure they are representative of current groundwater conditions at the BAM.

**Subject: CCR Groundwater Semiannual Detection Monitoring
Statistical Evaluation of BAM Data through October 2022
Arizona Public Service Company Cholla Power Plant – Navajo County, Arizona**

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) documents the ongoing statistical evaluation of detection monitoring (i.e., Appendix III constituents) groundwater data associated with the Bottom Ash Monofill (BAM) located at the Arizona Public Service Company (APS) Cholla Power Plant (Cholla) in Navajo County, Arizona. This routine statistical evaluation is completed by Geoscience Consulting Strategies LLC in accordance with the *Statistical Data Analysis Work Plan* (SDAWP) for the Cholla Power Plant and the Coal Combustion Residuals (CCR) Rule (Federal Register, 2020; WSP USA Environment & Infrastructure Inc. [WSP], 2023).

This statistical evaluation incorporates the October 2022 semiannual detection monitoring at the BAM, and any corresponding resample events, as necessary. The following sections present data inputs, statistical methods, results and recommendations for the subject analysis.

2.0 DATA INPUTS

The BAM groundwater monitoring well network consists of one background monitoring well (M-54) and three compliance (i.e., downgradient) monitoring wells (M-59, M-60 and M-61).

The BAM detection monitoring program performs statistical evaluations semiannually. The period of evaluation for this subject analysis ranges from November 2015 through October 2022 and includes:

- 1) the minimum of eight initial, or baseline, sampling rounds required by the CCR Rule and eleven subsequent sampling rounds of detection monitoring that occur on a semi-annual frequency; and
- 2) a January 2023 resampling event to confirm the initial exceedance declaration for sulfate during the October 2022 sampling event (see Table 2).

This data evaluation evaluates between 23 and 27 samples each for boron, calcium, chloride, sulfate, field pH and total dissolved solids (TDS) within each compliance monitoring well. The BAM detection monitoring program consists of eleven sampling rounds starting in November 2017:

BAM Sampling Round	Date
1 st	November 2017
2 nd	April 2018
3 rd	November 2018
4 th	May 2019
5 th	December 2019
6 th	June 2020
7 th	November 2020
8 th	April 2021
9 th	November 2021
10 th	May 2022
11 th	October 2022

Due principally to the CCR Rule requirement that a minimum of eight initial rounds of data be collected from the site prior to October 17, 2017, the frequency of sample collection prior to this date is short and variable (e.g., biweekly to quarterly sampling).

Appendix A contains the contents of the ProUCL data upload tables for the subject analysis. Data inputs for this statistical analysis were prepared, and provided by, WSP. The Appendix III analytes are listed by name or chemical symbol as column headers in the ProUCL data upload table. By ProUCL convention, each analyte has a corresponding data column (indicated with a "D_" prefix) that indicates if the analyte was detected or not at a concentration that exceeds the analytical reporting limit, where detectable concentrations are symbolized by a "1" and non-detectable concentrations are symbolized by a "0." The detection frequency is 100% for all sample data listed in Appendix A.

Table 1 details the not-to-exceed Background Threshold Values (BTVs) and method of calculation for the BAM.

3.0 METHODS

This statistical analysis follows the statistical methods and approaches put forth in the BAM SDAWP (WSP, 2023) and the United States Environmental Protection Agency (US EPA) Unified Guidance (2009). The subject statistical analysis consists of: 1) exploratory data analysis (EDA), including outlier analysis, calculating summary statistics, temporal trend analysis and fitting a statistical distribution model (i.e., Goodness-of-Fit Test Statistics) to sample populations and 2) comparing the October 2022 sample concentrations to corresponding not-to-exceed BTVs in Table 1. If an exceedance exists, the statistical significance of this exceedance is assessed through the prescribed resampling strategy. For this statistical analysis, the January 2023 resampling event fulfills the 1 of 3 resampling strategy for sulfate at MW-60.

4.0 RESULTS

Table 2 summarizes: 1) which Appendix III constituents exhibit exceedances above their respective BTVs by compliance well and 2) which constituents exhibit statistically significant ($p < 0.05$) temporal trends.

Appendix B contains the raw ProUCL EDA outputs as reference for the following statistical findings:

Monitoring Well M-59. The Appendix III constituent concentrations at this monitoring location do not show exceedances over their respective BTVs for the October 2022 sampling event.

The statistically significant ($p < 0.05$) trends for chloride (decreasing) and fluoride (increasing) remain persistent at this monitoring location during the October 2022 sampling event. There are no significant ($p < 0.05$) temporal trends for the remaining Appendix III constituents.

Monitoring Well M-60. The October 2022 sampling event resulted in an initial exceedance for sulfate at this monitoring location. The January 2023 sulfate resample concentration falls below its BTV and, therefore, declares the October 2022 initial exceedance statistically insignificant ($p < 0.05$). The remaining Appendix III constituent concentrations do not show exceedances over their respective BTVs for the October 2022 sampling event.

The statistically significant ($p < 0.05$) decreasing time series trends for boron and calcium at this monitoring location remain persistent during the October 2022 sampling event. There are no significant ($p < 0.05$) temporal trends for the remaining Appendix III constituents.

Monitoring Well M-61. The Appendix III constituent concentrations at this monitoring location do not show exceedances over their respective BTVs for the October 2022 sampling event.

The statistically significant ($p < 0.05$) decreasing trend for boron is persistent at this monitoring location. There are no significant ($p < 0.05$) temporal trends for the remaining Appendix III constituents at this monitoring location.

5.0 RECOMMENDATIONS

The results herein indicate the BAM should continue Detection Monitoring in accordance with 40 Code of Federal Regulations Section 257.94 (Federal Register, 2020).

The BAM SDAWP recommends updating BTVs every couple of years. There are several Appendix III constituents in background well M-54 (see Appendix A), including chloride and sulfate, that exhibit concentrations in exceedance of their respective BTVs (see Table 1) in recent years. This is one indication that the BTVs in Table 1 need updating to assure they are representative of current groundwater conditions at the BAM.

M-60	12/3/15-4/16/2021	Fluoride	1.7 (NP-UPL)	mg/L	1 of 2
M-61	12/3/15-4/16/2021	Fluoride	1.6 (NP-UPL)	mg/L	1 of 2

Notes:

BAM = Bottom Ash Pond

BTV = background threshold value

LPL = lower prediction limit

mg/L = milligrams per liter

NP = Non Parametric

P = Parametric

SU = standard units

TDS = total dissolved solids

UPL = upper prediction limit

¹ A 1 of 2 resampling strategy is in place for interwell parametric prediction limits. A 1 of 2 or a 1 of 3 resampling strategy is in place for non-parametric prediction limits and the limit represents the second highest concentration (i.e., second-order) value or the maximum concentration value of the data set (i.e., maximum order statistic), respectively. The BTV for calcium represents the second highest concentration value because the maximum concentration value is a perceived outlier and was removed from the evaluation.

Table 2
Cholla BAM Downgradient Sample Data Summary
Appendix III Statistical Analysis

Well	Sample_ID	SampDate	Constituent Concentration						
			Boron	Calcium	Chloride	Fluoride	pH	Sulfate	TDS

Notes:

BTV = background threshold value
 mg/L = milligrams per liter
 TDS = total dissolved solids
 UPL = upper prediction limit
 SU = standard units

0.50	Value from baseline monitoring period (December 2015 to September 2017)
	Reported value in current sampling round exceeds the BTV or UPL
	Statistically significant increasing trend present
	Statistically significant decreasing trend present
None	Insufficient evidence to identify a trend.

¹ New values calculated for this sampling round presented in bolded red text; ⁵ see Table 1 for relevant BTV and Intrawell UPL information

² For pH, values presented refer to the Upper Prediction Limit/Lower Prediction Limit, respectively. Values represent field pH measurements.

³ Temporal trends evaluated with Mann-Kendall trend tests (p<0.05); tied values (sequential sample concentrations)

Dixon's Outlier Test for Boron (m-59)							
Total N = 24							
Number NDs = 0							
Number Detects = 24							
10% critical value: 0.367							
5% critical value: 0.413							
1% critical value: 0.497							
Note: NDs excluded from Outlier Test							
1. Data Value 0.53 is a Potential Outlier (Upper Tail)?							
Test Statistic: 0.400							
For 10% significance level, 0.53 is an outlier.							
For 5% significance level, 0.53 is not an outlier.							
For 1% significance level, 0.53 is not an outlier.							
2. Data Value 0.48 is a Potential Outlier (Lower Tail)?							
Test Statistic: 0.000							
For 10% significance level, 0.48 is not an outlier.							
For 5% significance level, 0.48 is not an outlier.							
For 1% significance level, 0.48 is not an outlier.							
Dixon's Outlier Test for Boron (m-60)							
Total N = 24							
Number NDs = 0							
Number Detects = 24							
10% critical value: 0.367							

Appendix B Outlier Statistics

Number Detects = 24									
5% critical value: 0.413									
1% critical value: 0.497									
Note: NDs excluded from Outlier Test									
1. Data Value 0.54 is a Potential Outlier (Upper Tail)?									
Test Statistic: 0.167									
For 10% significance level, 0.54 is not an outlier.									
For 5% significance level, 0.54 is not an outlier.									
For 1% significance level, 0.54 is not an outlier.									
2. Data Value 0.48 is a Potential Outlier (Lower Tail)?									
Test Statistic: 0.000									
For 10% significance level, 0.48 is not an outlier.									
For 5% significance level, 0.48 is not an outlier.									
For 1% significance level, 0.48 is not an outlier.									
Dixon's Outlier Test for Boron (m-61)									
Total N = 24									
Number NDs = 0									
Number Detects = 24									
10% critical value: 0.367									
5% critical value: 0.413									
1% critical value: 0.497									
Note: NDs excluded from Outlier Test									
1. Data Value 0.52 is a Potential Outlier (Upper Tail)?									
Test Statistic: 0.250									
For 10% significance level, 0.52 is not an outlier.									
For 5% significance level, 0.52 is not an outlier.									
For 1% significance level, 0.52 is not an outlier.									

Appendix B Outlier Statistics

Number Detects = 24							
2. Data Value 0.48 is a Potential Outlier (Lower Tail)?							
Test Statistic: 0.000							
For 10% significance level, 0.48 is not an outlier.							
For 5% significance level, 0.48 is not an outlier.							
For 1% significance level, 0.48 is not an outlier.							
Dixon's Outlier Test for Calcium (m-59)							
Total N = 24							
Number NDs = 0							
Number Detects = 24							
10% critical value: 0.367							
5% critical value: 0.413							
1% critical value: 0.497							
Note: NDs excluded from Outlier Test							
1. Data Value 93 is a Potential Outlier (Upper Tail)?							
Test Statistic: 0.333							
For 10% significance level, 93 is not an outlier.							
For 5% significance level, 93 is not an outlier.							
For 1% significance level, 93 is not an outlier.							
2. Data Value 79 is a Potential Outlier (Lower Tail)?							
Test Statistic: 0.455							
For 10% significance level, 79 is an outlier.							
For 5% significance level, 79 is an outlier.							
For 1% significance level, 79 is not an outlier.							
Dixon's Outlier Test for Calcium (m-60)							
Total N = 24							

Appendix B Outlier Statistics

Number Detects = 24									
Number NDs = 0									
Number Detects = 24									
10% critical value: 0.367									
5% critical value: 0.413									
1% critical value: 0.497									
Note: NDs excluded from Outlier Test									
1. Data Value 92 is a Potential Outlier (Upper Tail)?									
Test Statistic: 0.222									
For 10% significance level, 92 is not an outlier.									
For 5% significance level, 92 is not an outlier.									
For 1% significance level, 92 is not an outlier.									
2. Data Value 80 is a Potential Outlier (Lower Tail)?									
Test Statistic: 0.300									
For 10% significance level, 80 is not an outlier.									
For 5% significance level, 80 is not an outlier.									
For 1% significance level, 80 is not an outlier.									
Dixon's Outlier Test for Calcium (m-61)									
Total N = 24									
Number NDs = 0									
Number Detects = 24

1	1372	66.45	1200	19	2.588	2.82	3.14	
For 5% Significance Level, there is no Potential Outlier								
For 1% Significance Level, there is no Potential Outlier								
Dixon's Outlier Test for Chloride (m-61)								
Total N = 24								
Number NDs = 0								
Number Detects = 24								
10% critical value: 0.367								
5% critical value: 0.413								
1% critical value: 0.497								
Note: NDs excluded from Outlier Test								
1. Data Value 1700 is a Potential Outlier (Upper Tail)?								
Test Statistic: 0.500								
For 10% significance level, 1700 is an outlier.								
For 5% significance level, 1700 is an outlier.								
For 1% significance level, 1700 is an outlier.								

Appendix B Outlier Statistics

Number Detects = 24							
2. Data Value 1100 is a Potential Outlier (Lower Tail)?							
Test Statistic: 0.500							
For 10% significance level, 1100 is an outlier.							
For 5% significance level, 1100 is an outlier.							
For 1% significance level, 1100 is an outlier.							
Dixon's Outlier Test for Fluoride (m-59)							
Total N = 24							
Number NDs = 0							
Number Detects = 24							
10% critical value: 0.367							
5% critical value: 0.413							
1% critical value: 0.497							
Note: NDs excluded from Outlier Test							
1. Data Value 1.8 is a Potential Outlier (Upper Tail)?							
Test Statistic: 0.600							
For 10% significance level, 1.8 is an outlier.							
For 5% significance level, 1.8 is an outlier.							
For 1% significance level, 1.8 is an outlier.							
2. Data Value 1.3 is a Potential Outlier (Lower Tail)?							
Test Statistic: 0.000							
For 10% significance level, 1.3 is not an outlier.							
For 5% significance level, 1.3 is not an outlier.							
For 1% significance level, 1.3 is not an outlier.							
Rosner's Outlier Test for 1 Outliers in Fluoride (m-60)							

Appendix B Outlier Statistics

Number Detects = 24								
Total N		25						
Number NDs		0						
Number Detects		25						
Mean of Detects		1.452

Re: CCR GROUNDWATER DETECTION MONITORING
STATISTICAL ANALYSIS AND RESULTS FOR THE BOTTOM ASH MONOFILL
APPENDIX III CONSTITUENT DATA COLLECTED THROUGH APRIL 2023
Arizona Public Service Company Cholla Power Plant - Navajo County, Arizona

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) presents the results of a statistical evaluation of groundwater monitoring data collected from monitoring wells downgradient of the Bottom Ash Monofill (BAM) located at the Arizona Public Service Company (APS) Cholla Power Plant (Site) in Navajo County, Arizona. The statistical evaluation was performed by Geosciences Consulting LLC (Geosciences Consulting), a subcontractor to WSP USA Environment and Infrastructure, Inc. (WSP) pursuant to Coal Combustion Residuals (CCR) Rule requirements for groundwater monitoring and corrective action detailed in 40 Code of Federal Regulations Sections 257.90 through 257.98 (CCR Rule) (Federal Register, 2020).

The BAM is a Site CCR unit that is currently in detection monitoring. The CCR Rule requires semi-annual evaluations of Appendix III constituent data collected from BAM downgradient wells on an ongoing basis to determine if a statistically significant increase (SSI) over the respective background threshold values (BTVs) presented in Attachment A. The statistical evaluation documented herein incorporates Appendix III constituent data collected from BAM downgradient wells M-59, M-60, and M-61 and BAM background well M-54 during the April 2023 semi-annual sampling event. The statistical evaluation was performed using the results of the 12 initial (or baseline) sampling rounds conducted prior to November 2017 and 12 detection monitoring sampling rounds beginning in November 2017. Groundwater concentrations are then compared to the M-54 background levels, represented by the interwell or intrawell BTVs calculated for each Appendix III constituent in the *CCR Groundwater Detection Monitoring Statistical Analysis and Results for the BAM, Appendix III Constituent Data Collected through October 2020* (Wood, 2021). Details of the results of the statistical evaluation are presented in Section 2.0.

2.0 STATISTICAL EVALUATION RESULTS

Attachment A presents the statistical evaluation conducted by Geosciences Consulting. The results of the April 2023 BAM downgradient well statistical evaluation are as follows:

- There are currently no SSIs over their respective BTVs for Appendix III constituents.
- No Appendix III constituents were detected at concentrations exceeding their respective BTVs during the April 2023 groundwater sampling event.
- A statistically significant decreasing temporal trend is evident for concentrations of chloride at M-59 and concentrations of boron and calcium at M-60.

- A statistically significant increasing temporal trend is evident for concentrations of fluoride at M-59 and concentrations of sulfate at M-60. Fluoride and sulfate did not exceed their intrawell BTVs and no SSI is present.

3.0 RECOMMENDATIONS

Based on the results of the statistical evaluation presented in Attachment A and pursuant to the CCR Rule, continuation of detection monitoring at a semi-annual frequency for Appendix III constituents at the BAM is warranted because there are currently no SSIs over Appendix III constituent background levels.

The BAM SDAWP recommends updating BTVs every couple of years. There are several Appendix III constituents in background well M-54 (Attachment A), including chloride and sulfate, that exhibit concentrations in exceedance of their respective BTVs (Table 1 of Attachment A) in recent years. This is one indication that the BTVs need updating to assure they are representative of current groundwater conditions at the BAM. It is recommended that BTVs be updated during the 2024 sampling year.

Geoscience Consulting Strategies LLC

Date: October 5, 2023

**Subject: CCR Groundwater Semiannual Detection Monitoring
Statistical Evaluation of BAM Data through April 2023
Arizona Public Service Company Cholla Power Plant – Navajo County, Arizona**

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) documents the ongoing statistical evaluation of detection monitoring (i.e., Appendix III constituents) groundwater data associated with the Bottom Ash Monofill (BAM) located at the Arizona Public Service Company (APS) Cholla Power Plant (Cholla) in Navajo County, Arizona. This routine statistical evaluation is completed by Geoscience Consulting Strategies LLC in accordance with the *Statistical Data Analysis Work Plan* (SDAWP) for the Cholla Power Plant and the Coal Combustion Residuals (CCR) Rule (Federal Register, 2020; WSP USA Environment & Infrastructure Inc. [WSP], 2023).

This statistical evaluation incorporates the April 2023 semiannual detection monitoring at the BAM. The following sections present data inputs, statistical methods, results and recommendations for the subject analysis.

2.0 DATA INPUTS

The BAM groundwater monitoring well network consists of one background monitoring well (M-54) and three compliance (i.e., downgradient) monitoring wells (M-59, M-60 and M-61).

The BAM detection monitoring program is scheduled to perform statistical evaluations semiannually. The period of evaluation for this subject analysis ranges from November 2015 through April 2023 and includes the minimum of eight initial, or baseline, sampling rounds required by the CCR Rule (spanning December 2015 to July 2017) and twelve subsequent sampling rounds of detection monitoring that occur on a semi-annual frequency (spanning September 2017 to April 2023, as shown in the table inset below). Due principally to the CCR Rule requirement that a minimum of eight initial rounds of data be collected from the site prior to October 17, 2017, the frequency of sample collection prior to this date is short and variable (e.g., biweekly to quarterly sampling).

BAM Sampling Round	Date
1 st	September 2017
2 nd	April 2018
3 rd	November 2018
4 th	May 2019
5 th	December 2019
6 th	June 2020
7 th	November 2020
8 th	April 2021
9 th	November 2021
10 th	May 2022
11 th	October 2022
12 th	April 2023

This data evaluation evaluates between 24 and 28 samples each for boron, calcium, chloride, sulfate, field pH and total dissolved solids (TDS) within each compliance monitoring well. Appendix A contains the contents of the data upload tables for the subject analysis. Data inputs for this statistical analysis were prepared, and provided by, WSP. The Appendix III analytes are listed by name or chemical symbol as column headers in the ProUCL data upload table. By ProUCL convention, each analyte has a corresponding data column (indicated with a "D_" prefix) that indicates if the analyte was detected or not at a concentration that exceeds the analytical reporting limit, where detectable concentrations are symbolized by a "1" and non-detectable concentrations are symbolized by a "0." The detection frequency is 100% for all sample data listed in Appendix A.

Table 1 details the not-to-exceed Background Threshold Values (BTVs) and method of calculation for the BAM. Per the SDAWP (WSP, 2023), the BTVs are updated over time. The dates in Table 1 reflect the sampling period that represents the current BAM BTVs.

3.0 METHODS

This statistical analysis follows the statistical methods and approaches put forth in the SDAWP (WSP, 2023) and the United States Environmental Protection Agency (US EPA) Unified Guidance (2009). The subject statistical analysis consists of: 1) exploratory data analysis (EDA), including outlier analysis, calculating summary statistics, temporal trend analysis for all constituent-well pairings and fitting a statistical distribution model (i.e., Goodness-of-Fit Test Statistics) to sample populations and 2) comparing the April 2023 sample concentrations to corresponding not-to-exceed BTVs in Table 1. If an exceedance exists, the statistical significance of this exceedance is assessed through the prescribed resampling strategy.

4.0 RESULTS

Table 2 summarizes: 1) which Appendix III constituents exhibit exceedances above their respective BTVs by compliance well and 2) which constituents exhibit statistically significant ($p < 0.05$) temporal trends.

Appendix B contains the raw ProUCL EDA outputs as reference for the following statistical findings:

Monitoring Well M-59. The Appendix III constituent concentrations at this monitoring location do not show exceedances over their respective BTVs for the April 2023 sampling event.

The statistically significant ($p < 0.05$) trends for chloride (decreasing) and fluoride (increasing) remain persistent at this monitoring location during the April 2023 sampling event. There are no significant ($p < 0.05$) temporal trends for the remaining Appendix III constituents.

Monitoring Well M-60. The Appendix III constituent concentrations at this monitoring location do not show exceedances over their respective BTVs for the April 2023 sampling event.

During the April 2023 sampling event, the statistically significant ($p < 0.05$) decreasing trends for boron and calcium at this monitoring location persists and sulfate demonstrates a statistically significant ($p < 0.05$) increasing trend. There are no significant ($p < 0.05$) temporal trends for the remaining Appendix III constituents.

Monitoring Well M-61. The Appendix III constituent concentrations at this monitoring location do not show exceedances over their respective BTVs for the April 2023 sampling event.

The historically statistically significant ($p < 0.05$) decreasing trend for boron becomes insignificant at this monitoring location during the April 2023 sampling event. There are no significant ($p < 0.05$) temporal trends for the remaining Appendix III constituents at this monitoring location.

5.0 RECOMMENDATIONS

There are several Appendix III constituents in background well M-54 (see Appendix A), including chloride and sulfate, that exhibit concentrations in exceedance of their respective BTVs (see Table 1) in recent years. The BTVs shown in Table 1 represent sample data through 2020 and 2021, depending on the type of UPL calculation. Given approximately two to three years have passed since the last BTV update, and background well constituent concentrations were recently detected above the BTVs shown in Table 1, it is recommended that BTVs for the BAM be updated during the 2024 sampling year.

M-54	12/3/2015-10/21/2020	pH (lower limit)	7.3 (P-LPL)	SU	1 of 2
M-54	12/3/2015-10/21/2020	Sulfate	380 (NP-UPL)	mg/L	1 of 3
M-54	12/3/2015-10/21/2020	TDS	3225 (P-UPL)	mg/L	1 of 2

Compliance Well	Dates Corresponding to Data Used to Derive UPL	Constituent	Intrawell BTVs (Calculation Method ¹)	Units	Resampling Strategy
M-60	12/3/15-4/16/2021	Fluoride	1.7 (NP-UPL)	mg/L	1 of 2
M-61	12/3/15-4/16/2021	Fluoride	1.6 (NP-UPL)	mg/L	1 of 2

Notes:

BAM = Bottom Ash Pond

BTV = background threshold value

LPL = lower prediction limit

mg/L = milligrams per liter

NP = Non Parametric

P = Parametric

SU = standard units

TDS = total dissolved solids

UPL(T) = upper prediction limit (trend)

¹ A 1 of 2 resampling strategy is in place for interwell parametric prediction limits. A 1 of 2 or a 1 of 3 resampling strategy is in place for non-parametric prediction limits and the limit represents the second highest concentration (i.e., second-order) value or the maximum concentration value of the data set (i.e., maximum order statistic), respectively. The BTV for calcium represents the second highest concentration value because the maximum concentration value is a perceived outlier and was removed from the evaluation.

Table 2
Cholla BAM Downgradient Sample Data Summary
Appendix III Statistical Analysis

Notes:

BTV = background threshold value
 mg/L = milligrams per liter
 TDS = total dissolved solids
 UPL = upper prediction limit
 SU = standard units

0.50	Value from baseline monitoring period (December 2015 to September 2017)
	Reported value in current sampling round exceeds the BTV
	Statistically significant increasing trend present
	Statistically significant decreasing trend present
None	Insufficient evidence to identify a trend.

¹ New values calculated for this sampling round presented in bolded red text; see Table 1 for relevant BTV information.

² For pH, values presented refer to the Upper Prediction Limit/Lower Prediction Limit, respectively. Values represent field pH measurements.

³ Temporal trends evaluated with Mann-Kendall trend tests ($p < 0.05$); tied values (sequential sample concentrations that are equal overtime) can cause misleading trend results.

NDs not included in the following:									
			Potential	Obs.	Test	Critical	Critical		
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)		
1	1508	82.85	1300	6	2.507	2.84	3.16		
For 5% Significance Level, there is no Potential Outlier									
For 1% Significance Level, there is no Potential Outlier									

Appendix B Outlier Statistics

Number NDs		0						
Rosner's Outlier Test for 1 Outliers in Chloride (m-59)								
Total N		25						
Number NDs		0						
Number Detects		25						
Mean of Detects		1316						
SD of Detects		80						
Number of data		25						
Number of suspected outliers		1						
NDs not included in the following:								
			Potential	Obs.	Test	Critical	Critical	
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	1316	78.38	1200	6	1.48	2.82	3.14	
For 5% Significance Level, there is no Potential Outlier								
For 1% Significance Level, there is no Potential Outlier								
Rosner's Outlier Test for 1 Outliers in Chloride (m-60)								
Total N		26						
Number NDs		0						
Number Detects		26						
Mean of Detects		1373						
SD of Detects		66.68						
Number of data		26						
Number of suspected outliers		1						
NDs not included in the following:								
			Potential	Obs.	Test	Critical	Critical	
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	1373	65.38	1200	19	2.647	2.84	3.16	
For 5% Significance Level, there is no Potential Outlier								

Appendix B Outlier Statistics

Number NDs		0							
For 1% Significance Level, there is no Potential Outlier									
Rosner's Outlier Test for 1 Outliers in Chloride (m-61)									
Total N		25							
Number NDs		0							
Number Detects		25							
Mean of Detects		1376							
SD of Detects		109.1							
Number of data		25							
Number of suspected outliers		1							
NDs not included in the following:									
			Potential	Obs.	Test	Critical	Critical		
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)		
1	1376	106.9	1700	7	3.031	2.82	3.14		
For 5% Significance Level, there is 1 Potential Outlier									
Therefore, Observation 1700 is a Potential Statistical Outlier									
For 1% Significance Level, there is no Potential Outlier									
Rosner's Outlier Test for 1 Outliers in Fluoride (m-54)									
Total N		26							
Number NDs		0							
Number Detects		26							
Mean of Detects		1.373							
SD of Detects		0.108							
Number of data		26							
Number of suspected outliers		1							
NDs not included in the following:									
			Potential	Obs.	Test	Critical	Critical		

Appendix B Outlier Statistics

Number NDs		0						
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	1.373	0.106	1.8	19	4.034	2.84	3.16	
For 5% Significance Level, there is 1 Potential Outlier								
Therefore, Observation 1.8 is a Potential Statistical Outlier								
For 1% Significance Level, there is 1 Potential Outlier								
Rosner's Outlier Test for 1 Outliers in Fluoride (m-59)								
Total N		25						
Number NDs		0						
Number Detects		25						
Mean of Detects		1.404						
SD of Detects		0.0978						
Number of data		25						
Number of suspected outliers		1						
NDs not included in the following:								
#	Mean	sd	Potential outlier	Obs. Number	Test value	Critical value (5%)	Critical value (1%)	
1	1.404	0.0958	1.8	19	4.132	2.82	3.14	
For 5% Significance Level, there is 1 Potential Outlier								
Therefore, Observation 1.8 is a Potential Statistical Outlier								
For 1% Significance Level, there is 1 Potential Outlier								
Rosner's Outlier Test for 1 Outliers in Fluoride (m-60)								
Total N		26						
Number NDs		0						
Number Detects		26						
Mean of Detects		1.45						
SD of Detects		0.0762						

Appendix B Outlier Statistics

Number NDs		0						
Number of data		26						
Number of suspected outliers		1						
NDs not included in the following:								
			Potential	Obs.	Test	Critical	Critical	
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	1.45	0.0747	1.7	19	3.348	2.84	3.16	
For 5% Significance Level, there is 1 Potential Outlier								
Therefore, Observation 1.7 is a Potential Statistical Outlier								
For 1% Significance Level, there is 1 Potential Outlier								
Rosner's Outlier Test for 1 Outliers in Fluoride (m-61)								
Total N		26						
Number NDs		0						
Number Detects		26						
Mean of Detects		1.431						
SD of Detects		0.0736						
Number of data		26						
Number of suspected outliers		1						
NDs not included in the following:								
			Potential	Obs.	Test	Critical	Critical	
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	1.431	0.0722	1.6	20	2.345	2.84	3.16	
For 5% Significance Level, there is no Potential Outlier								
For 1% Significance Level, there is no Potential Outlier								
Rosner's Outlier Test for 1 Outliers in pH (m-54)								
Total N		25						

Appendix B Outlier Statistics

Number NDs		0							
Number NDs		0							
Number Detects		25							
Mean of Detects		7.576							
SD of Detects		0.136							
Number of data		25							
Number of suspected outliers		1							
NDs not included in the following:									
			Potential	Obs.	Test	Critical	Critical		
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)		
1	7.576	0.133	7.3	19	2.069	2.82	3.14		
For 5% Significance Level, there is no Potential Outlier									
For 1% Significance Level, there is no Potential Outlier									
Rosner's Outlier Test for 1 Outliers in pH (m-59)									
Total N		25							
Number NDs		0							
Number Detects		25							
Mean of Detects		7.688							
SD of Detects		0.148							
Number of data		25							
Number of suspected outliers		1							
NDs not included in the following:									
			Potential	Obs.	Test	Critical	Critical		
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)		
1	7.688	0.145	8.1	6	2.851	2.82	3.14		
For 5% Significance Level, there is 1 Potential Outlier									
Therefore, Observation 8.1 is a Potential Statistical Outlier									
For 1% Significance Level, there is no Potential Outlier									

Appendix B Outlier Statistics

Number NDs	0							
Dixon's Outlier Test for pH (m-60)								
Total N = 24								
Number NDs = 0								
Number Detects = 24								
10% critical value: 0.367								
5% critical value: 0.413								
1% critical value: 0.497								
Note: NDs excluded from Outlier Test								
1. Data Value 8 is a Potential Outlier (Upper Tail)?								
Test Statistic: 0.400								
For 10% significance level, 8 is an outlier.								
For 5% significance level, 8 is not an outlier.								
For 1% significance level, 8 is not an outlier.								
2. Data Value 7.5 is a Potential Outlier (Lower Tail)?								
Test Statistic: 0.000								
For 10% significance level, 7.5 is not an outlier.								
For 5% significance level, 7.5 is not an outlier.								
For 1% significance level, 7.5 is not an outlier.								
Dixon's Outlier Test for pH (m-61)								
Total N = 24								
Number NDs = 0								
Number Detects = 24								
10% critical value: 0.367								
5% critical value: 0.413								
1% critical value: 0.497								
Note: NDs excluded from Outlier Test								
1. Data Value 8 is a Potential Outlier (Upper Tail)?								

Appendix B Outlier Statistics

Number NDs	0							
Test Statistic: 0.400								
For 10% significance level, 8 is an outlier.								
For 5% significance level, 8 is not an outlier.								
For 1% significance level, 8 is not an outlier.								
2. Data Value 7.22 is a Potential Outlier (Lower Tail)?								
Test Statistic: 0.483								
For 10% significance level, 7.22 is an outlier.								
For 5% significance level, 7.22 is an outlier.								
For 1% significance level, 7.22 is not an outlier.								
Rosner's Outlier Test for 1 Outliers in Sulfate (m-54)								
Total N	27							
Number NDs	0							
Number Detects	27							
Mean of Detects	368.1							
SD of Detects	20.39							
Number of data	27							
Number of suspected outliers	1							
NDs not included in the following:								
			Potential	Obs.	Test	Critical	Critical	
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	368.1	20.01	420	21	2.592	2.86	3.18	
For 5% Significance Level, there is no Potential Outlier								
For 1% Significance Level, there is no Potential Outlier								
Rosner's Outlier Test for 1 Outliers in Sulfate (m-59)								

Appendix B Outlier Statistics

Number NDs		0						
Total N		26						
Number NDs		0						
Number Detects		26						
Mean of Detects		350.8						
SD of Detects		13.83						
Number of data		26						
Number of suspected outliers		1						
NDs not included in the following:								
			Potential	Obs.	Test	Critical	Critical	
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	350.8	13.57	400	22	3.629	2.84	3.16	
For 5% Significance Level, there is 1 Potential Outlier								
Therefore, Observation 400 is a Potential Statistical Outlier								
For 1% Significance Level, there is 1 Potential Outlier								
Rosner's Outlier Test for 1 Outliers in Sulfate (m-60)								
Total N		27						
Number NDs		0						
Number Detects		27						
Mean of Detects		363.7						
SD of Detects		26.77						
Number of data		27						
Number of suspected outliers		1						
NDs not included in the following:								
			Potential	Obs.	Test	Critical	Critical	
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	363.7	26.27	450	22	3.285	2.86	3.18	
For 5% Significance Level, there is 1 Potential Outlier								
Therefore, Observation 450 is a Potential Statistical Outlier								
For 1% Significance Level, there is 1 Potential Outlier								

Appendix B Outlier Statistics

Number NDs		0							
Rosner's Outlier Test for 1 Outliers in Sulfate (m-61)									
Total N		26							
Number NDs		0							
Number Detects		26							
Mean of Detects		361.2							
SD of Detects		19.04							
Number of data		26							
Number of suspected outliers		1							
NDs not included in the following:									
			Potential	Obs.	Test	Critical	Critical		
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)		
1	361.2	18.67	420	7	3.151	2.84	3.16		
For 5% Significance Level, there is 1 Potential Outlier Therefore, Observation 420 is a Potential Statistical Outlier									
For 1% Significance Level, there is no Potential Outlier									
Rosner's Outlier Test for 1 Outliers in TDS (m-54)									
Total N		27							
Number NDs		0							
Number Detects		27							
Mean of Detects		3011							
SD of Detects		190.8							
Number of data		27							
Number of suspected outliers		1							
NDs not included in the following:									
			Potential	Obs.	Test	Critical	Critical		
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)		
1	3011	187.2	2300	23	3.798	2.86	3.18		

Appendix B Outlier Statistics

Number NDs		0						
For 5% Significance Level, there is 1 Potential Outlier								
Therefore, Observation 2300 is a Potential Statistical Outlier								
For 1% Significance Level, there is 1 Potential Outlier								
Rosner's Outlier Test for 1 Outliers in TDS (m-59)								
Total N		26						
Number NDs		0						
Number Detects		26						
Mean of Detects		2712						
SD of Detects		127.5						
Number of data		26						
Number of suspected outliers		1						
NDs not included in the following:								
			Potential	Obs.	Test	Critical	Critical	
#	Mean	sd	outlier	Number	value	value (5%)	value (1%)	
1	2712	125	2300	22	3.291	2.84	3.16	
For 5% Significance Level, there is 1 Potential Outlier								
Therefore, Observation 2300 is a Potential Statistical Outlier								
For 1% Significance Level, there is 1 Potential Outlier								
Rosner's Outlier Test for 1 Outliers in TDS (m-60)								
Total N		28						
Number NDs		0						
Number Detects		28

1 PROJECT SUMMARY

1.1 PURPOSE

Arizona Public Service Company (APS) is the largest electric utility in Arizona, and the principal subsidiary of publicly traded S&P 500-member Pinnacle West Capital Corporation. APS and PacifiCorp jointly own and operate the Cholla Generating Station located near Joseph City. The generating station generates electricity by burning sub-bituminous coal and uses cooling water from the man-made Cholla Lake. As part of its onsite operations, APS installed monitoring wells, extraction wells, and seepage intercept trenches downgradient of the Fly Ash Pond (FAP) in the Geronimo and Hunt areas to intercept potentially impacted groundwater. Wells were recently installed in the Geronimo seepage intercept area as part of Corrective Measures to address groundwater impacts resulting from the FAP. APS is conducting corrective action activities to support compliance with coal combustion residuals (CCR) corrective action requirements detailed in 40 Code of Federal Regulations (CFR) Part 257 (herein referred to as the CCR Rule) (Federal Register, 2020).

This document provides a final completion description of the system constructed at the FAP to equip 5 recently installed extraction wells and 4 existing wells and sumps with pumps and piping to facilitate extraction of water from this area, as part of Corrective Measures installed as CCR Remedy.

1.2 FACILITY AND CCR UNIT DESCRIPTION

Facility Description. Cholla is a coal-fired power plant that had two electric generating units (Units 1 and 3) in operation during 2022. Units 1 and 3 with a combined nameplate capacity of 425.9 megawatts are owned and operated by APS. Unit 4 was retired on December 24, 2020. Coal burned at the plant was previously sourced from the McKinley Mine in New Mexico. When the McKinley Mine closed in 2009, the source of coal switched to the Lee Ranch and El Segundo mines near Grants, New Mexico.

Facility Location. The plant and associated infrastructure are located on land owned/leased by APS adjacent to Interstate 40 (I-40) between the City of Winslow and the City of Holbrook in Navajo County, Arizona. The plant sits next to Cholla Reservoir, a cooling pond for Unit 1 and water storage reservoir for the plant that was originally constructed in the early 1900s by the Joseph City Irrigation Company (Shilling, 2005) but was more recently configured in its current location and design by APS in 1961. Cholla Reservoir receives deliveries of groundwater pumped from the nearby Cholla Well Field extracting from the Coconino Sandstone Aquifer. The typical water surface elevation of Cholla Reservoir is 5,022 feet (ft) above mean sea level (amsl).

CCR Unit Description. Plant infrastructure includes four single CCR units referred to as the Fly Ash Pond (FAP), Bottom Ash Pond (BAP), Bottom Ash Monofill (BAM), and Sedimentation Pond (SEDI). All the CCR units except the SEDI are located north of I-40. The SEDI was the first of the CCR units placed into service in 1976. The FAP and BAP dams were completed in 1978, and the BAM came into operation in the late 1990s.

The FAP is located north of the I-40 Interstate and east of the Plant. The Geronimo seepage collection area is located south of the FAP dam, north of I-40, while the Hunt seepage collection area is located south of both the FAP and the I-40.

APS has installed monitoring wells, extraction wells, and seepage intercept trenches down gradient of the FAP to intercept potentially impacted groundwater.

APS has contracted with WSP USA Environment & Infrastructure Inc. (WSP) for design services to equip five new wells (EW-01, EW-02, EW-03, EW-04, GSX-1R) with well pumps, flow regulators, flow meters, valves, piping, and all required electrical and instrumentation for each of the wells. Three existing sumps (GSX-4, GSX-3, Hunt A) and one existing well (HSX-1) have also been upgraded by adding flow regulators, flow meters, new level sensors, hour meters, additional valving, piping as needed and associated electrical work. The extracted water will be pumped via the 2-inch existing discharge piping system for the Geronimo and Hunt Seepage Areas. The 2-inch discharge piping drops into a 4.5-inch pipeline with atmospheric break that converts the flow to gravity flow as it flows back to the main Cholla facility for use. The project also includes replacement of two totalizing turbine meters with magnetic flow meters. After the Plant ceases operation, the water will be diverted to a future evaporation pond utilizing the existing discharge piping and disposed of there. Piping was modified to ensure full pipe flow and provide a bypass line to allow for easier meter maintenance. Air release valves have been provided at each flow meter. The as-built drawings for this system are provided in **Appendix A**.

1.3 CONSTRUCTION TEAM

Contractor: Allied Power

- Edwin (Dave) Bitner, Project Manager, edwin.bittner@aps.com
- Jess Edmenson, Project Superintendent, jedmenson@alliedpwr.com
- James (Quentin) Scott, Project Superintendent, James.Q.Scott@aps.com
- JBar4 subcontractor for piping and civil

Construction management: Mountain West Consulting

- Terry Stewart
- Stephen (Milo) Nicholson

WSP oversight:

- Maren Henley, Project Manager
- Becky Weaver, Project Engineering Oversight, Civil, Mechanical
- Andrea Kagie-Hay, Certifying Engineer, Civil, Mechanical
- Brad Rohwer, Design Engineer, Electrical
- Jeff Jorgensen, Certifying Engineer, Electrical
- Darren Mack, Field Engineering Oversight

APS

- Byron Conrad, Project Manager (retired September 2022)
- Kurt Adams, Project Manager
- Natalie Chrisman-Lazarr, Environmental Engineer
- Ray Markley, Geotechnical Engineer
- Cody Miller, Onsite Environmental Lead

2 EXISTING FACILITIES

2.1 GERONIMO

The Geronimo seepage intercept collection system consists of two intercept trenches connected to two collection sumps, Geronimo C (GSX-3) and Geronimo D (GSX-4), and two seepage extraction wells, Geronimo A (GSX-1) and Geronimo B (GSX-2). The two original extraction wells (GSX-1 and GSX-2) were abandoned in a previous project, while 5 new extraction wells (EW) were installed, EW-01 through EW-04 and GSX-1R. For this project, the five new extraction wells were equipped with pumps and associated valves, piping, meters, and level control to provide the ability to extract groundwater as part of their remediation work. All five wells are constructed with a 6-inch diameter schedule 80 PVC well casing within a 10-inch well borehole. Each well also has a 10-inch outer casing installed that extends from approximately 2-3 feet above grade to approximately 5 feet below grade. This project also included the upgrade of the existing sumps by adding valves, piping, meters and replacing the level controls, matching the new well equipment where possible. See the table below for the existing well construction details for the 5 extraction wells and 2 sumps located in the Geronimo seepage area.

2.1.1 WELLS

The wells on the Geronimo side are summarized in the Table 2.1 below.

Table 2.1 Geronimo Well Details

WELL	GROUND SURFACE ELEV. (ft amsl)	TOTAL DEPTH (ft bgs)	SCREEN INTERVAL (ft bgs)		SCREEN ELEV. (ft amsl)		BEFORE CONSTRUCTION STATIC WATER LEVEL (ft bgs)
			FROM	TO			
EW-01	5035.09	55	20	50	5015.09	4985.09	22.5
EW-02	5034.01	53	18	48	5016.01	4986.01	19.67
EW-03	5035.20	52	17	47	5018.20	4988.20	23.04
EW-04	5037.18	24	9	19	5028.18	5018.18	0.2
GSX-1R	5035.85	54	29	49	5006.85	4986.85	23.49

Notes: Vertical datum is North American Vertical Datum 1988, horizontal coordinate system is NM West State Plane (ft), North American Datum 1983

Notes: bgs- below ground surface, ft - feet/foot, amsl - above mean sea level

2.1.2 SUMPS

The sumps on the Geronimo side are summarized in the Table 2.2 below.

Table 2.2 Geronimo Sump Details

WELL / SUMP NO.	GROUND SURFACE ELEV. (ft amsl)	TOTAL DEPTH (ft bgs)	WELL / SUMP DIA. (in)
GSX-3	5036.46	10.5	48
GSX-4	5035.00	10.5	48

Notes: Vertical datum is North American Vertical Datum 1988, horizontal coordinate system is NM West State Plane (ft), North American Datum 1983
 Notes: bgs- below ground surface, ft - feet/foot, amsl - above mean sea level

2.2 HUNT

The Hunt seepage intercept collection system consists of one intercept trench connected to one collection sump, Hunt A, and one extraction well, HSX-1 (Hunt B). This project will upgrade the existing Hunt sump and well by adding valves, piping, meters and replacing the level controls, matching the new well equipment where possible. The existing well construction details for the sump and extraction well located in the Hunt seepage area are summarized below.

The well and sump on the Hunt side are summarized in the Table 2.3 below.

Table 2.3 Hunt Well and Sump Details

WELL / SUMP NO.	GROUND SURFACE ELEV. (ft amsl)	TOTAL DEPTH (ft bgs)	WELL / SUMP DIA. (in)	SCREEN INTERVAL (ft bgs)		SCREEN ELEV. (ft amsl)	
				FROM	TO		
Hunt A	5032.80	9.5	48	-	-	-	-
HSX-1	5032.80	49	5	19	49	5013.80	4983.80

Notes: Vertical datum is North American Vertical Datum 1988, horizontal coordinate system is NM West State Plane (ft), North American Datum 1983
 Notes: bgs- below ground surface, ft - feet/foot, amsl - above mean sea level

The Hunt trench conveying water to Hunt A does not seem to be receiving any water. In July 2022, 4 potholes along the length of the trench were dug to inspect the trench’s condition. Water was found in 1 of the potholes, and the pipe was exposed and seemed to be clogged. In August 2022, JBar4 repaired the trench in the pothole locations back to original conditions. They placed a new section of pipe placed in gravel, wrapped by fabric and a mesh netting was placed slightly below grade.

2.3 COMBINED FACILITIES

Each sump and well discharge pipe connects to a common 2-inch header pipeline. The below-grade consists of 2-inch-high density polyethylene (HDPE) piping that is assumed buried with a minimum of 3 feet of cover to minimize the potential for freezing. The frost depth in this area can extend approximately 12-24 inches below grade.

2.3.1 HUNT FLOW METER

The common pipeline from the Hunt seepage area travels west parallel to the I-40 until it reaches an underpass where it travels north of the I-40. The flows from the Hunt sump and well are measured in a new magnetic flow meter (replacing the existing turbine flow meter) located north of the I-40. This piping continues north until it meets with the discharge piping from the Geronimo seepage area below ground.

2.3.2 COMBINED FLOW METER

The combined discharge from the Hunt and Geronimo seepage areas is measured in a new magnetic flow meter before it tees off to drop into a 6-inch steel pipe that goes to the Cholla facility. The 2-inch discharge pipe also can continue up the hill to pump into the FAP; however, this option is not used currently. The combination of dropping into a larger pipe and the atmospheric break from the alternate routing means the water flows by gravity in the 6-inch pipe back to the Cholla facility.

3 CIVIL & MECHANICAL

3.1 WELL PUMP INSTALLATION

The five new wells are equipped with a submersible pump with a shroud, pressure transmitter for level control and measurement in the well, piping, valves, flow regulator, flow meter, sampling/flow measuring port, pressure gauge and switch, and heat tracing with insulation on the above-grade piping. Flow regulators are designed with no mechanical parts and an EPDM orifice that is compressed by the fluid to regulate the flow to a constant rate with varying pressures due to static and dynamic head loss changes. The flow regulators are threaded and are installed with a union downstream to allow for regulators to be changed out as needed to achieve the desired flow rates.

Each pump is designed to be operated with a control panel that is able to provide level pump control for on/off operation and a Hand-Off-Auto (HOA) switch for manual control. Each control panel has a pump run time meter, and a pressure switch as a safety permissive. The pump is not allowed to run when pressures in the discharge line exceed the setpoint. Once pressures reduce to the acceptable set point, the pump will be allowed to operate.

New wells are equipped with a Grundfos 5SQ05-90 pump, with a ½-hp motor, capable of operating at an average of 5 gallons per minute (gpm) at a total dynamic head (TDH) of 100 feet. Each well has a flow regulator valve installed that is designed for 0.5 gpm up to 5 gpm, based on the well development data as well as conditions during start-up.

Each pump is installed with a shroud, set at a depth such that the shroud intake (bottom of pump) is located approximately 2 feet above the bottom of the well. These well pumps have 1-inch stainless steel column piping that transition to ½ inch stainless steel piping above grade. The anticipated pumping rates for these new wells are between 0.5 and 5 gpm. The goal is for the flow rate to be selected that allows nearly continuous pumping at each well; however, the wells will also operate as fill and draw, as water levels and recoveries dictate.

3.2 SUMP UPGRADES

The existing sumps and well have been upgraded to provide improved operation and measurement capability for each well. Each sump/well piping has been modified to include a flow meter, flow regulator, air release valve, and pressure switch. The existing level control probes have been replaced with a pressure transducer for level control and to provide level readout at each well. Hour meters have been provided at each control panel for each pump. The following section discusses this equipment in more detail.

3.3 PIPING AND APPURTENANCES

Each well was installed with piping, valves, flow meter, flow regulator and controls to provide a completely functioning system capable of operating automatically or manually. The wells operate independently of each other but discharge into a common header. The flow regulator is constructed with an EPDM orifice that reacts/distorts to the pressure in the line to maintain a relatively constant flow rate for each well, as desired.

Several flow regulators with different flow rates are provided for each well / sump and can be changed out seasonally, or as well production changes over time.

Each well / sump is equipped with the following equipment and appurtenances located above the well, except for the level transmitter, which is installed in the well:

- Pressure transmitter for well level and pump controls
- Level indicator/readout
- Flow regulator
- Check valve
- Magnetic flow meter
- 3-way ball valve for sampling and manual flow measurement
- Ball valve for isolation
- Air/vacuum valve with isolation ball valve
- Pressure gauge and pressure switch assembly
- Heat trace and insulation

The new wells are outfitted with a well flange with modifications to accommodate the required equipment. The outer well conductor casings on each new well has been modified by cutting the existing cap and welding a slip-on flange to the well casing. A custom blind flange has been provided with threaded holes, open holes, and holes with short, welded carbon steel pipe nipples to accommodate the piping and equipment. A ½-inch threaded hole on the blind flange provides for attachment of a ½-inch well vent for each well. Two ½-inch and one 1-inch carbon steel pipe nipples have been welded to the blind flange to allow connection and support for the pump discharge piping, and access for the pump power cable and the pressure transmitter, respectively. Each well also has a 1-inch sounding tube installed to allow for manual water level measurements. The well level readout from the pressure transmitter is accessible in the control panel.

The existing sumps and well reuse the level control probe conduit for the new level pressure transducer. The pump and power connections have not been modified. The well level readout from the pressure transmitter is accessible in the control panel.

Each flow meter measures instantaneous flow rate and has a totalizer for manually recording accumulated flows. The air/vacuum release valve has been installed at a high point in the piping to avoid air lock of the flow in the pipeline. The three-way ball valve can be used for sampling the water, or for manual flow measurement through timed water volume measurements. The three-way ball valve handle is either turned for straight flow through to the common pipeline, or for 90-degree flow through the sampling port. All above-ground piping has been insulated and provided with heat tracing to ensure the water in the piping will not freeze.

4 ELECTRICAL

4.1 EXISTING PANELS

The existing sumps and well have been upgraded to provide improved operation and measurement capability for each well. The existing electrical equipment has been upgraded to include the addition of new starter panels, level controls, flow meters and pressure switches. Hour meters have been provided at each control panel for each pump. The following section discusses this equipment in more detail.

4.2 NEW PANELS

The well pumps have been installed with a local control panel at each well. The pumps will turn on and off based on level measurements from the pressure transmitters installed in each well. The on and off set points are user-adjustable in the field. The flow rates are dictated by a flow regulator that has a specified flow rate. The flow regulator is relatively easy to change, if needed seasonally or as water levels change over time. The control panel has an HOA switch to allow for manual operation when performing maintenance, testing, or other in-field pumping operations. A level indicator was installed on each control panel and reads water levels in feet below ground surface.

Having 3 sumps and 6 wells on one discharge system without interlocking controls means that under certain conditions, smaller flow wells may be overpowered by larger flow wells if the pressure in the line becomes too high. A hydraulic model was developed for the system and the results indicate that all pumps can operate at the same time at slightly lower rates than targeted for some of the smaller wells, when installed with flow control valves at the target flow rates. Without flow control valves, three of the smaller wells would not be able to pump when all pumps are on at the same time. The model may not allow for a complete and accurate picture, as ground surface elevations are estimated in some cases, and the existing piping sizing, conditions, and routing were estimated from available information. As a precaution based on the model accuracy, and the potential for flow control valves to be removed from the pipeline, each well was equipped with a pressure switch that will be set with a high level to turn off the pump and prevent it from pumping if the discharge pressure is too high. Once the pressure is reduced to below the set range, the pump will be allowed to operate again. This is to prevent pumps from operating at higher pressures when it may be unable to pump water.

4.3 PUMP CONTROLS

The pumps are controlled by a pressure transmitter set in each well as described in Table 4.1.

Table 4.1 Pump Controls Set in Field

WELL / SUMP NO.	TARGET PUMP RATE	INSTALLED REGULATOR RATE	PUMP ON		PUMP OFF		TRANSMITTER SET DEPTH (bgs)
			DEPTH (bgs)	TRANSMITTER SET POINT (ma)	DEPTH (bgs)	TRANSMITTER SET POINT (ma)	
EW-01	1.5	1.0	25	10	49.3	4.2	49.8
EW-02	5.0	4.0	25	10	48.5	4.2	49
EW-03	5.0	4.0	20	9	45.5	4.2	46
EW-04	2.5	1.5	15	7.5	18.7	4.2	19.2
G SX-1R	0.75	0.75	20	9	47.3	4.2	47.8

G SX-4	30.0	25.0	10.8	4.5	11.7	4.02	11.8
H SX-1	13.0	11.0	35	12.5	40.7	4.2	41.2
HUNT-A	25.0	20.0	4.5	4.5	6.4	4.02	6.5

Notes: bgs- below ground surface, ft - feet/foot, amsl - above mean sea level

5 FIELD TESTING AND INSPECTION

5.1 CONSTRUCTION OVERSIGHT

The Geronimo and Hunt well and sump upgrades were completed by Allied Power as the prime contractor, and the civil work was subcontracted and completed by JBar4. Along with WSP’s oversight, Mountain West Consulting provided onsite construction management. Allied Power and WSP documented their activities with Construction Reports and field notes included in **Appendix B**. Construction photos are included in **Appendix C**. **Table 5.1** below lists the dates WSP staff were onsite, and a brief description of activities completed during each visit.

Table 5.1 WSP Construction Oversight

DATE	PERSONNEL	ACTIVITY
9/1/2022	Darren Mack	Civil trench work
9/15/2022	Darren Mack	Setting adapters to well, electrical work on control panels
9/21-9/22/2022	Darren Mack	Pressure testing and main header connections
10/6/2022	Darren Mack	Pressure testing and setting pumps
10/11/2022	Darren Mack	Backfilling trenches, materials testing, pump setting
11/3/2022	Darren Mack	Check in on above-ground piping, heat tracing and insulation
11/9/2022	Darren Mack	Check in on above-ground piping, heat tracing and insulation
11/16-11/17/2022	Darren Mack, Andrea Kagie-Hay, Jeff Jorgensen, John Estepa, Leonard Cratic	Walkdown for punch list items as well as resolving leaking ARVs. Also did a site visit of the Bottom Ash Pond and electrical personnel looked at the control panels at the Fly Ash Pond
12/7/2022	Darren Mack	Walkdown for ensure all punch list items completed
12/22/2022	Darren Mack	Walkdown on equipment and fencing
1/18/2023	Darren Mack	Final walkdown and sign off by APS

5.2 PIPELINE PRESSURE TESTING

Allied and JBar 4 conducted the pressure testing for the HDPE piping. Each test was conducted over a 3-hour period where the pipe must hold +/-10% starting pressure. All pipes passed this test and were documented either by Allied or WSP personnel. See **Appendix B** Field Notes for details on pipeline pressure testing.

5.3 MATERIALS TESTING

Speedie Associates was contracted to do the materials testing for this work. A compaction curve was completed on this material which was found to be silty sandy clay with trace gravel. The maximum dry density was 118.4 PCF and the optimum moisture content was 14.1%.

In place density testing of the trenches was completed according to the specifications for a total of 30 tests, 25 on Geronimo and 6 on Hunt. All density tests were acceptable. Test results can be found in **Appendix D**.

6 KEY DEVIATIONS FROM DESIGN

6.1 CIVIL/MECHANICAL

There were a couple key deviations from the issued for construction drawings worth noting:

- The design plans had an 8-inch well diameter, once in the field it was discovered that the well diameter was 10-inch. An adapter flange was welded onto the well casings to downsize to 8-inch.
 - Gravel was placed around the Geronimo sideroad and within the fencing on both Geronimo and Hunt sides. This was done for the safety of field personnel who will be onsite during rainstorms and to keep ice from forming on the ground.
 - Fencing was placed around both GSX-4 and EW-02 together, not separately. This was to ensure field inspectors would only have to unlock 1 gate, as opposed to 2 gates when monitoring.
 - The TWX fencing was replaced but only as repairs to existing fencing and did not include the 2 vehicle swing gates WSP called out in the plans. This upgrade is now proposed to be part of the Bottom Ash Pond upgrades project that is set to be completed early 2024.
-

6.2 ELECTRICAL

- The electrical trenching location deviated from the plans and was routed so that the electrical conduit was placed in a trench alongside the combined HDPE pipe header to keep the utilities in a single area for future maintenance and locating.

7 START UP AND COMMISSIONING

7.1 FINAL WALKTHROUGH

WSP personnel visited the site multiple times during the construction phases. The pre walk through was performed on December 7, 2022 with Milo and Quentin. The goal of this visit was to ensure all equipment was up and running, and to identify any remaining items that Allied needed to address before completion of the system. The final walk through was completed on January 18, 2023 with WSP, Allied, Mountain West and APS personnel attending. At this time, all task items were signed off on and Allied was given a set date (February 6, 2023) for final turnover package to be sent to WSP and APS.

7.2 HAND OVER TO APS

Allied turned over the system on January 18, 2023. The turnover package with all the redlines, manuals, and reports were submitted to WSP and Mountain west on February 8, 2023. **Appendix E** includes the Startup and Commissioning information, final punch list, and pump control setpoints and data.

General Notes:

1. Perform all work in accordance with these drawings and other related contract documents.
2. Any work performed without the approval of the Owner and/or the Engineer, and all work and materials not in conformance with the Specifications are subject to removal and replacement at the Contractor's expense.
3. The Contractor is responsible to obtain all necessary permits prior to construction.
4. Contractor agrees that the job site conditions during the course of construction of this project are their sole and complete responsibility, including the safety of all persons and property.
5. It is the Contractor's responsibility to become familiar with the job site and any underground utilities/facilities, whether shown or not on the plans.
6. Existing utilities and/or other facilities have been shown on the plans from data provided from previous field surveys, existing maps, and/or other current plans within the area of this project. The Contractor must determine the exact location and/or elevation of existing utilities that pertain to and affect the construction of this project.
7. The Contractor must call 811 for underground services to locate utility facilities at least one week prior to performing any excavation. Contractor is responsible for locating onsite utilities.
8. All pipelines, wells, substructures, or utilities of any kind, underground or above ground, must be protected in place, unless otherwise directed. Use caution during construction of the project to avoid damaging existing facilities intended to remain.
9. Take necessary and proper precautions to protect adjacent properties from any and all damage that may occur from the Contractor's operations.
10. Take special precautions around power lines in relation to equipment and project work. Power lines may be energized.
11. It is the Contractor's responsibility to protect the Work from damage due to weather events. The contractor shall accept responsibility for Work damage by weather events in any unprotected areas of the Work.
12. It is the Contractor's responsibility to protect all existing road surfaces from equipment or vehicle damage. Any rutting or other damage to roadways must be repaired in a timely manner to the satisfaction of the Owner.
13. Contractor is to maintain a set of redlines on site at all time, available for review when requested. As part of the redlines, the Contractor is to document existing and newly installed conditions, especially of below-ground piping and conduit bury depth when below-ground piping has been exposed and or located. As-builts will provide depths where possible.

General Piping Notes:

1. Field verify all dimensions before fabricating pipe.
2. All piping and mechanical equipment shall be installed in accordance with APS Fossil Generation Standard ME03-004001, the contract documents, or manufacturer's recommendations. If there is a discrepancy between the documents, the most stringent will apply unless otherwise approved by the Engineer.
3. Excavated areas shall be returned to its original condition.
4. Backfill shall be placed and compacted in 8-inch maximum loose lift thicknesses. Material shall be uniformly moisture conditioned and compacted by hand or mechanical methods to provide the required uniform minimum density without damage to the installation of adjacent structures. The compacted backfill shall be compacted to a minimum of 95% of the maximum dry density at a moisture content of minus 3 to plus 2 of optimum (ASTM D698).
5. All structural welding shall conform to AWS D10.12 Structural Welding Code.
6. Welding of all piping shall conform to ASME B31.1 Code.
7. HDPE pipe fusion must conform to ASTM F2620 standards.
8. Below grade piping shall be installed with tracer wire and underground warning tape in accordance with APS standard installation procedures or the contract documents. The tracer wire must be tested for continuity to the satisfaction of the Engineer.
9. Above grade piping shall be insulated with the specified insulation and aluminum covers or jackets, and heat tracing.

General Earthwork Notes:

1. A minimum of one gradation and plasticity index test (ASTM D422 & D4318) is required per 1000 cubic yards, per soil type, of stockpiled or in-place source material.
2. One laboratory compaction curve (ASTM D698) per soil type is required, matched with an associated gradation and plasticity index test.
3. Field in-place density tests shall be taken at a rate of one test for each 100 cubic yards or three tests per shift (whichever is greater) in each type of material used as fill, or at the discretion of the Engineer's representative. Additional tests will be required in critical areas, as deemed by the Engineer.

Technical Specifications:

1. Project Description: This project is located in the Geronimo and Hunt seepage collection areas located south of the Fly Ash Pond (FAP) at the APS Cholla Generating Station. Seepage from the FAP is collected by a system of seepage intercept trenches and extraction wells located throughout the area. The Geronimo extraction system is located north of the highway and comprises two sumps equipped with pumping equipment, two recently abandoned extraction wells, and five recently installed, but not equipped, extraction wells. The Hunt extraction system is located south of the highway and comprises one sump and one extraction well, both equipped with pumping equipment.
The project consists of equipping the five recently installed extraction wells, modifying the three existing sumps and one extraction well with updated controls and instruments, and replacing two mechanical propeller/turbine flow meters with magnetic flow meters.
The five recently installed wells will be equipped with a submersible well pump, level sensor, check valve, magnetic flow meter, 3-way valve to allow sampling and manual flow testing, isolation valve, flow regulator for flow control, air/vacuum release valve and controls. The controls will allow the pump to be turned on/off by a submersible level pressure transmitter, and read-out flows (instantaneous and total), water level, and pump hour run times. A pressure switch located in the discharge piping for each well will act as a permissive for pump operation to avoid issues with too many pumps operating together and creating too high of a pressure for a pump to operate properly. The well piping will be combined with the existing extraction well discharge system. The discharge piping reaches a high point, then flows by gravity to the APS main site location into a pond or other collection structure.
The modifications to the existing sumps and wells will include adding flow meters, level sensor, air/vacuum releases valves, flow regulator for flow control and controls. Piping will be modified as necessary and discharge piping will be reconnected into the existing well discharge system.
The project will include single phase electrical work, powered from the existing source. Power will be delivered to, and pumps to be controlled by a local control panel located near each of the pumps. The work includes all equipment, piping, valves, meters, instruments, and appurtenances required for a complete and operational system.
2. Submersible Well Pumps
 - a. Provide Grundfos Model 5SQ05-90 submersible pump and shroud where indicated on the drawings. Install local control panels with HOA and level pressure transmitter for automatic on/off control.
3. Pressure Transmitter
 - a. Provide a level pressure transmitter with 4-20 mA output, and minimum accuracy of 0.2% of the set span. Cable length shall be 60 feet and with PE insulation. Seals to be EPDM. Measuring range to be 0-15 psi, relative pressure. Provide Endress+Hauser Waterpilot FMX21 for wells (0.87-in diameter) submersible transmitter, or approved equal.
 - b. Provide external display capable of setting display to show feet below ground surface (bgs) directly with a customizable unit (e.g. FTBGS). Provide Endress+Hauser RIA15, or approved equal.
4. General Piping:
 - a. Dielectric Insulation Flange Kits / Unions shall be utilized when connecting pipes, fittings or valves of dissimilar metals.
 - b. Non-detectable Underground Warning Tape shall be provided on all below-grade piping. Material shall be 4 mil thick polyethylene film with permanent 1-inch minimum lettering. Tape shall be 3-inch wide, blue, with "Caution Water Line Below" wording. Provide Christy's TA-ND-3-BW tape, or approved equal.
 - c. Tracer Wire shall be provided for all below-grade piping. Material shall be 12- or 14-gauge copper clad steel wire with high-density polyethylene (HDPE) insulation, minimum 30 mil thickness. Connectors must be moisture-resistant, corrosion-resistant and designed for direct bury applications. Do not wrap wire around piping. All end points must be properly grounded. See electrical specifications and design drawings for details.
 - d. Insulation shall be provided on all above-ground piping.
 - i. Provide pre-formed insulation on above-ground piping, with aluminum jacket and covers on above-ground piping. Insulation thickness shall be minimum 1-1/2 inches, rated for a minimum temperature of 5° F or lower and a maximum temperature of 100° F or higher. Insulation shall be compatible with heat tracing installation.
 - ii. Provide ArmaFlex insulation or approved equal.
 - e. Heat tracing - Provide heat tracing on all above ground piping, per the electrical specifications and design. HDPE pipe to be wrapped with aluminum tape or other compatible insulation layer to protect from excessive heat from heat trace wiring.

6. Piping Materials:

- a. Stainless Steel piping shall be ASTM A312 316 alloy Seamless Schedule 40. All fittings shall be ASTM A351, Class 150, threaded.
- b. Carbon Steel piping shall be ASTM A106 Grade B Seamless Schedule 40. All fittings shall be ASTM A105 Grade II, 2000 lb., threaded.
- c. HDPE piping shall be PE4710 material, IPS pipe size DR 11.

7. General Valves:

- a. Valves in steel piping shall be 316 stainless steel material with Teflon seats.

8. Air/Vacuum Release Valves

- a. Provide 1/2-inch (preferred) or 1-inch air/vacuum release valve with same size isolation ball valve as shown in drawings.
- b. Provide A.R.I. model D-040, DeZurik model 143C, or approved equal. Provide with A.R.I. polyurethane thermal protection jacket accessory or similar jacket for insulation.

9. Ball Valves

- a. Provide stainless steel body in-line ball valve with full port size and quarter-turn open to close, threaded connections, Teflon seat, and designed for minimum 200 psi CWP.

10. Check Valves

- a. Provide soft-seated plunger Y-type check valve with stainless steel body, 316 stainless steel internals and Teflon disc. Valve to have threaded connections. Provide Flomatic model 816 (part no. YV-001-110100), or approved equal.

11. Three-way Valve

- a. Provide stainless steel 3-way ball valve with T-shaped port to allow straight-through flow in one position and 90° flow in the other position from one inlet to one of two outlets. Seats must be designed to ensure full shut-off to discharge not being used. Valve body shall be 316 SS with Teflon seats. Provide Bonomi Model 956N, or approved equal.

12. Flow Regulator Valve

- a. Provide flow regulator valve with stainless steel body, buna-N orifice, and FNPT threaded end connections. Provide regulators with sizes as shown and flow rates as listed on design drawings. Provide Dole Valves Model SSGX, Flomatic Model Flo-Trol CDX, or approved equal.

13. Flow Meters

- a. Provide magnetic flow meters where shown on the drawings with integral field-mounted transmitter of the size shown.
- b. Power required shall be single-phase 120 VAC. Local display shall be digital with totalizer and have 4-20 mA output. Provide two grounding rings with the flow meter.
- c. Electrode shall be lined with PTFE material.
- d. Provide Rosemount Model 8705 magnetic flow meter with Model 8732 transmitter, or approved equal.

14. Pressure Switch/Gauge Assembly

- a. Provide heavy-duty pressure switch and digital or analog gauge installed with isolation ball valves. Each component is to be suitable for installation on pipeline with an operating range of 0-150 psi.
- b. Provide pressure switch with form c contacts, with field-settable cut-in and cut-out pressures.
- c. Pressure switch and pressure gauge to be rated for outdoor installation at temperatures from 0 to 175 deg F and a minimum rating of IP65.
- d. Provide Mercoid, or approved equal.

1. CONTRACTOR TO USE FINE AGGREGATE AS INITIAL BACKFILL AS DEFINED AS BEING ABLE TO PASS A NO. 4 US STANDARD SIEVE BUT NOT A NO. 200 US STANDARD SIEVE AND MUST NOT CONTAIN ANY DELETERIOUS MATERIALS.
 2. CONTRACTOR TO BACKFILL AND COMPACT TO 95% IN 8 INCH LIFTS. SEE TECHNICAL NOTES.
 3. CONTRACTOR TO USE CLSM, ABC, AND/OR GRANULAR OR SCREENED NATIVE BACKFILL.
 4. INSTALL WARNING TAPE ENTIRE LENGTH OF BURIED PIPING. SEE TECHNICAL SPECIFICATIONS.

- NOTES:
1. TRACER BOXES SHALL BE LOCATED AT EACH ELBOW.
 2. MAXIMUM SPACING OF TRACER BOXES SHALL BE 1000'.

DETAIL 2 TYPICAL TRACER BOX
NTS PIPES THAT ARE BELOW GROUND

DETAIL 3 TYPICAL TRACER BOX
NTS PROTECTION COLLAR

- NOTES:
1. TRACER BOXES SHALL BE LOCATED AT EACH ELBOW.
 2. MAXIMUM SPACING OF TRACER BOXES SHALL BE 1000'.
 3. COBRA T1 USED WITH NO GROUNDING ANODE.
 4. COBRA T2 USED WITH GROUNDING ANODE.

DETAIL 4 TYPICAL TRACER BOX
NTS PIPES THAT COME ABOVE GROUND

NOTES

1. ALL CONCRETE SHALL BE CLASS 'C' PER SECT. MAG 725.
2. FITTINGS NOT SPECIFICALLY DETAILED SHALL BE HEAVY DUTY DESIGN.
3. STRAIN POSTS SHALL BE SPACED AT 500' MAXIMUM SPACING.
4. BOTH CORNER AND STRAIN POSTS SHALL HAVE STRAIN PANELS.
5. ALL POSTS SHALL BE CAPPED.
6. MEMBER SIZES SHALL BE THE FOLLOWING:

MEMBER	AISC SIZE	OUTSIDE DIA.
CORNER POST	2-1/2"	2.875"
LINE POST	1-1/2"	1.900"
STRAIN POST	1-1/2"	1.900"
BRACE	1-1/4"	1.666"
STRETCH BAR	3/16"x3/4" FLAT	3/16"x3/4" FLAT
GATE POST	3-1/2"	4.000"
TOP RAIL	1-1/4"	1.666"

7. CONSTRUCTION AND MATERIALS SHALL CONFORM TO MAG SECT. 420 AND 772, RESPECTIVELY. SEE TABLE 772-1 FOR WEIGHTS OF MEMBERS.

DETAIL 160 FROM MARICOPA ASSOCIATION OF GOVERNMENTS (MAG).

DETAIL 5 6' CHAIN LINK FENCE AND GATE

FAP SEEPAGE SYSTEM EXTRACTION WELLS PUMP INSTALLATION WA# CHC08903
ELECTRICAL INSTALLATION SCOPE

INTRODUCTION – APS CHOLLA PRESENTLY HAS A FAP SEEPAGE SYSTEM WITH 4 EXISTING WELL PUMPS AND TWO ABANDONED PUMPS. THIS PROJECT INCLUDES UPGRADING THE EXISTING 4 PUMP CONTROLS, DEMOLISHING THE TWO ABANDONED PUMP CONTROLS, AND ADDING 5 NEW PUMPS WITH THEIR ASSOCIATED ELECTRICAL EQUIPMENT. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO FIELD VERIFY THE LOCATION, CONDITION, AND SPECIFICATIONS OF ALL ELECTRICAL COMPONENTS, LOCATIONS AND DEPTHS OF WIRING AND CONDUIT PRIOR TO COMMENCING ANY WORK ON THE SITE.

DEMOLITION – GSX-1 AND GSX-2 WELL PUMPS ARE PRESENTLY REMOVED AND OUT OF SERVICE. CONTRACTOR IS TO REMOVE THEIR ASSOCIATED ELECTRICAL EQUIPMENT, WHICH INCLUDES WIRING FROM ELECTRICAL PANEL 24A1 TO STARTERS, AND FROM STARTERS TO PUMPS. REMOVE EXISTING STARTER PANELS AND LEVEL CONTROLS. REMOVE EXISTING HEAT TRACING. DO NOT REMOVE EXISTING PANEL 24A1 BREAKERS – THEY WILL BE RE-USED TO FEED NEW WELL PUMPS. REFER TO DRAWING 240456 SHEET 3D FOR MORE DETAILS.

NEW WELL ELECTRICAL EQUIPMENT INSTALLATION – NEW EW-1 THRU 4 AND GSX-1R WELL PUMPS ELECTRICAL ARE TO BE INSTALLED, WHICH INCLUDES:

1. WIRING FROM EXISTING PANEL 24A1 POWER PANEL TO NEW MOTOR STARTER PANELS. EW-3 & 4 WILL UTILIZE EXISTING PANEL BREAKERS PREVIOUSLY USED BY GSX-1 & 2 PUMPS (SEE DEMOLITION ABOVE).
2. CONTRACTOR TO PROVIDE AND INSTALL NEW GSX-1R FEEDER BREAKER AND ASSOCIATED HEAT TRACE FEEDER BREAKER IN EXISTING PANEL 24A1.
3. CONTRACTOR TO PROVIDE AND INSTALL NEW EW-2 FEEDER BREAKER AND ASSOCIATED HEAT TRACE FEEDER BREAKER IN EXISTING PANEL 24A2.
4. CONTRACTOR TO PROVIDE AND INSTALL NEW EW-1 POWER PANEL WITH ITS ASSOCIATED FEEDER BREAKERS. REFER TO PROJECT B44308 DRAWINGS.
5. CONTRACTOR TO PROVIDE FIVE (5) NEW PUMP MOTOR STARTER PANELS PER THE PROJECT B-44450 DRAWINGS. START PANELS SHALL INCLUDE: STARTERS, MOORE INDUSTRIES SPA2/HLPRG/2PRG/UI-DPDT/DIN ALARM RELAY LEVEL CONTROLLERS. ALL ASSOCIATED CIRCUIT BREAKERS, AND TERMINAL BLOCKS PER THE DRAWINGS. THE STARTER PANEL DOOR SHALL INCLUDE AN ETM, HAND-OFF-AUTO (HOA) SELECTOR SWITCH, AND E+H RIA15 LEVEL DISPLAY. ALL DEVICES SHALL BE WIRED AND LABELED PER THE DRAWINGS. PANEL ENCLOSURE SHALL BE NEMA 4 RATED. ALL NEW PUMP MOTOR STARTER PANELS SHALL BE FABRICATED, WIRED, TESTED AND LABELED TO MEET UL 508 BY A CERTIFIED INDUSTRIAL CONTROL PANEL FABRICATOR.
6. CONTRACTOR SHALL PROVIDE AND INSTALL NEW ENDRESS-HAUSER (E+H) LEVEL TRANSMITTERS AND PROVIDE WIRING FROM TRANSMITTERS TO THEIR LEVEL DISPLAYS AND MOORE LEVEL RELAY CONTROLLERS.
7. CONTRACTOR SHALL PROVIDE AND INSTALL NEW ROSEMOUNT FLOW TRANSMITTERS AND PROVIDE POWER WIRING FROM STARTER PANEL BREAKERS TO TRANSMITTERS.
8. CONTRACTOR SHALL PROVIDE AND INSTALL THE PRESSURE SWITCHES, PROVIDE POWER WIRING FROM STARTER PANEL BREAKERS TO SWITCHES, AND CONTROL WIRING FROM HIGH PRESSURE SWITCH CONTACT TO ITS RESPECTIVE STARTER.
9. CONTRACTOR SHALL PROVIDE AND INSTALL NEW HEAT TRACING EQUIPMENT FOR ALL NEW WELL PIPING ABOVE GROUND. ALSO WIRING FROM POWER PANEL FEEDER BREAKER TO HEAT TRACING EQUIPMENT.
10. THE EXISTING HUNT POWER CIRCUIT SHALL BE INTERRUPTED IN MID-RUN (UNDERGROUND) TO PROVIDE POWER TO PANEL 24A12. PULL BOX 23428 CAN BE USED TO ASSIST IN THIS EFFORT. THE EXISTING CONDUIT RUN SHALL BE MODIFIED TO INSTALL A NEW PULL BOX (23428) INLINE WHICH WILL HAVE A NEW UNDERGROUND SPUR CONNECTION TO THE 24A12 PANEL. CABLE SHALL BE TEE'D OFF AT PULL BOX 23428 SUCH THAT A WATER TIGHT CONNECTION IS MAINTAINED FOR ALL CONNECTIONS.
11. CONTRACTOR SHALL PROVIDE AND INSTALL 2 ADDITIONAL NEW FLOW TRANSMITTERS – ONE FOR COMBINED GERONIMO / HUNT FLOW INDICATION, AND A SECOND FOR HUNT SYSTEM FLOW INDICATION. WIRING FROM NEW POWER PANEL 24A12 TO TRANSMITTERS SHALL BE INCLUDED.

EXISTING WELL ELECTRICAL EQUIPMENT MODIFICATIONS – EXISTING PUMPS LOCATIONS HUNT A, HUNT HSX-1, GERONIMO GSX-3 AND GSX-4 WILL BE UPGRADED. THESE UPGRADES INCLUDE ADDITION OF NEW STARTER PANELS, LEVEL CONTROLS, FLOW TRANSMITTERS, AND PRESSURE SWITCHES. AS A RESULT, THE FOLLOWING MODIFICATIONS ARE NEEDED AT EACH OF THE 4 EXISTING SITES:

12. EXISTING WARRICK LEVEL SENSORS AND ASSOCIATED CONTROL EQUIPMENT SHALL BE DEMOLISHED, AND ITS ASSOCIATED WIRING.
13. CONTRACTOR SHALL PROVIDE AND INSTALL NEW E+H LEVEL TRANSMITTERS AND PROVIDE WIRING FROM TRANSMITTERS TO THEIR LEVEL DISPLAYS AND MOORE LEVEL RELAY CONTROLLERS.
14. CONTRACTOR SHALL PROVIDE AND INSTALL NEW ROSEMOUNT FLOW TRANSMITTERS AND PROVIDE POWER WIRING FROM STARTER PANEL BREAKERS TO TRANSMITTERS.
15. CONTRACTOR SHALL PROVIDE AND INSTALL THE PRESSURE SWITCHES, PROVIDE POWER WIRING FROM STARTER PANEL BREAKERS TO SWITCHES, AND CONTROL WIRING FROM HIGH PRESSURE SWITCH CONTACT TO ITS RESPECTIVE STARTER.
16. CONTRACTOR TO PROVIDE FOUR (4) NEW PUMP MOTOR STARTER PANELS TO FEED THE EXISTING PUMP MOTORS PER THE PROJECT B-44450 DRAWINGS, (SAME AS FOR NEW PUMPS EXCEPT WITH OVERLOAD RELAY).
17. EACH EXISTING PUMP STARTER PANEL FEEDS A GRUNDFOS CAPACITOR START PANEL WHICH IS REQUIRED FOR EACH EXISTING PUMP (NOT REQUIRED FOR THE FIVE NEW PUMPS). THE WIRING BETWEEN THE GRUNDFOS PANELS AND THE EXISTING STARTERS IS NOT DEFINED ON EXISTING APS SCHEMATICS OR ON THE NEW SCHEMATICS ATTACHED TO THIS RFP. THE CONTRACTOR IS RESPONSIBLE FOR DOCUMENTING THE EXISTING INTERWIRING BETWEEN BOTH AND DUPLICATING ITS FUNCTIONALITY WITHIN THE NEW STARTER PANELS. SCHEMATICS SHALL BE REDLINED TO PROVIDE AN ASBUILT RECORD OF THE FUNCTIONING INSTALLATION WHEN COMPLETED. THE EXISTING STARTER AND GRUNDFOS SUPPORTS WILL NEED TO BE MODIFIED TO MOUNT BOTH.

THE CONTRACTOR SHALL PERFORM AND PROVIDE THE ABOVE SCOPE AND PER THE ATTACHED PROJECT DRAWINGS. IF DIFFERENCES EXIST, THE CONTRACTOR SHALL CONTACT APS OR APS'S REPRESENTATIVE FOR CLARIFICATION.

ALL WORK SHALL MEET ALL NEC AND OSHA REQUIREMENTS.

CONTRACTOR SHALL PROVIDE A REDLINED COPY OF ALL ELECTRICAL DRAWINGS TO APS OR THEIR REPRESENTATIVE AT COMPLETION OF EQUIPMENT START-UP.

AS-BUILT CERTIFICATION

THIS SET OF AS-BUILT/RECORD DRAWINGS REFLECT CHANGES FROM THE ORIGINAL CONTRACT DRAWINGS THAT WERE MADE DURING CONSTRUCTION AND HAVE BEEN PREPARED FROM INFORMATION PROVIDED TO THE ENGINEER BY THE CONSTRUCTION CONTRACTOR(S). THE ENGINEER DOES NOT WARRANT THIS DRAWING SET TO BE COMPLETE AND ACCURATE IN ALL RESPECTS.

WELL CONTROL PANEL AND LIGHTING PANEL FOR EW-01

WELL CONTROL PANEL & DISCONNECT SWITCH TYPICAL FOR EW-02, EW-03, EW-04 & GSX1R

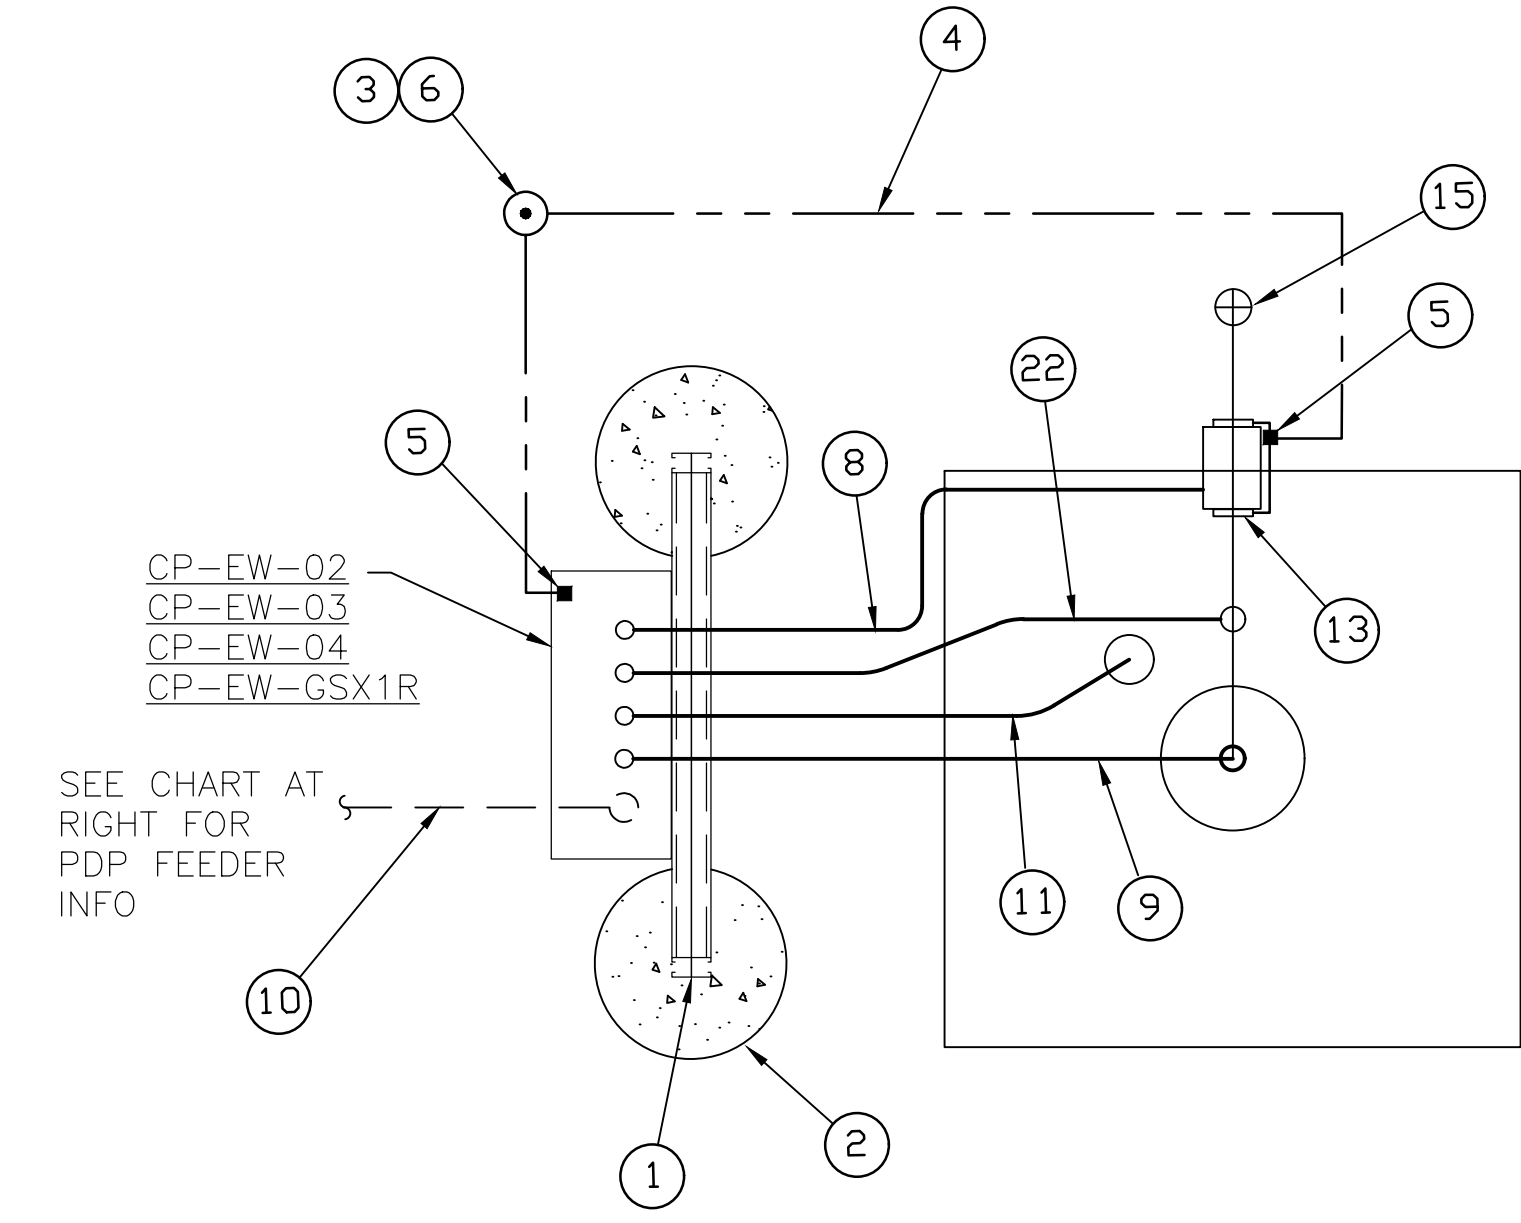

CHAIN LINK FENCE GROUNDING

- KEY NOTES:**
1. GALVANIZED BACK TO BACK P1001 UNISTRUT.
 2. 36" LONG BY 16" DIAMETER SONOTUBE. CENTER UNISTRUT WITHIN TUBE AND FILL TO 2" ABOVE GRADE WITH 4000 PSI CONCRETE. SLOPE TOP CONCRETE SURFACE TO FACILITATE WATER RUN OFF.
 3. 3/4" X 10' LONG COPPER CLAD STEEL GROUND ROD.
 4. #2 BARE COPPER GROUND WIRE.
 5. BOLTED GROUNDING CONNECTOR.
 6. CADWELD GROUNDING CONNECTION.
 7. CADWELD CABLE TO CABLE GROUND CONNECTION.
 8. 3/4" RIGID STEEL CONDUIT FOR FLOW METER.
 9. 3/4" RIGID STEEL CONDUIT FOR PUMP MOTOR POWER. CABLE PROVIDED BY MANUFACTURER.
 10. 1 1/2" RIGID STEEL CONDUIT FOR DISCONNECT POWER.
 11. 3/4" RIGID STEEL CONDUIT FOR LEVEL TRANSMITTER.
 12. NOT USED.
 13. CONTRACTOR TO INSTALL FLOW METER GROUNDING RINGS ON BOTH SIDES OF THE FLOW METER. GROUND ACCORDINGLY.
 14. 1" RIGID STEEL CONDUIT FOR CONTROL PANEL POWER.
 15. PIPING TO COMMON HEADER.
 16. ALL EXPOSED PIPING SHALL HAVE HEAT TRACE.
 17. 4" IPS, PVC PLASTIC DB-120 DIRECT BURIAL 20' LENGTH WITH COUPLING OR BELL END.
 18. NOT USED
 19. NOT USED
 20. RECEPTACLE, WEATHER PROOF, DUPLEX, 15 AMPS, 120V, GFCI.
 21. PANEL BOARD, 1 PHASE, 3 WIRE, 120/240VAC, CUTLER-HAMMER #E2T2036S, W/1-100A 2 POLE MAIN BREAKER, 1-30A 2 POLE BKR, 1-20A 1 POLE BKR, 3-15A 1 POLE BKRS.
 22. 3/4" RIGID STEEL CONDUIT FOR PRESSURE TRANSMITTER.
 23. CONNECTOR, GROUND, BRONZE, BOLTED, 1-1/2" SPS (1-7/8" OD) PIPE TO FLEXIBLE COPPER BRAID.
 24. CONNECTOR, GROUND, BRONZE, BOLTED, 2-1/2" SPS (2-7/8" OD) PIPE TO FLEXIBLE COPPER BRAID.
 25. BRAID, COPPER, TINNED, ROLLED (FLAT), 1-1/2" WIDE.

POWER AND GROUNDING DIAGRAM FOR EW-01

NOTE:
SITE LAYOUT AND CONDUIT ROUTING ARE DIAGRAMMATIC. CONTRACTOR TO FIELD VERIFY LAYOUT AND MAKE ADJUSTMENTS AS NECESSARY.

POWER AND GROUNDING DIAGRAM TYPICAL FOR EW-02, EW-03, EW-04 & GSX1R

NOTE:
SITE LAYOUT AND CONDUIT ROUTING ARE DIAGRAMMATIC. CONTRACTOR TO FIELD VERIFY LAYOUT AND MAKE ADJUSTMENTS AS NECESSARY.

11. SPA2/HLPRG/2PRG/U/-DPDT/DIN IS COMPLETE PART NUMBER FOR MOORE ALARM RELAY.

AS-BUILT CERTIFICATION

THIS SET OF AS-BUILT/RECORD DRAWINGS REFLECT CHANGES FROM THE ORIGINAL CONTRACT DRAWINGS THAT WERE MADE DURING CONSTRUCTION AND HAVE BEEN PREPARED FROM INFORMATION PROVIDED TO THE ENGINEER BY THE CONSTRUCTION CONTRACTOR(S). THE ENGINEER DOES NOT WARRANT THIS DRAWING SET TO BE COMPLETE AND ACCURATE IN ALL RESPECTS.

- SHEET NOTES:**
1. WHEN THE PUMP IS RUN IN THE AUTO MODE IT IS CONTROLLED BY THE LEVEL (LIC) TRANSMITTER.
 2. LIC CR1 (LSL) CONTACT CLOSING WHEN WELL LEVEL RISES ABOVE THE "SHUT PUMP OFF" DEPTH.
 3. WHEN THE LEVEL FALLS BELOW THE "SHUT PUMP OFF" DEPTH, LIC CR1 (LSL) WILL OPEN STOPPING THE MOTOR.
 4. LIC CR2 (LSH) CONTACT CLOSING WHEN THE WELL LEVEL RISES ABOVE THE "START PUMP DOWN" LEVEL AND THE WELL STARTS.
 5. M (HOLDING CONTACT) CLOSING WHEN THE CONTACTOR IS ENERGIZED. THE CONTROL CIRCUIT WILL KEEP THE PUMP OPERATING AS THE LEVEL BEGINS TO FALL.
 6. IF THE PUMP IS RUN MANUALLY (HAND MODE) FROM THE CONTROL PANEL, THE OPERATOR MUST NOT LET THE PUMP RUN DRY BY MONITORING THE FLOWMETER.
 7. THE SYSTEM WILL CYCLE LIKE THIS AS LONG AS THE WELL HAS POWER.
 8. PROVIDE ENM MODEL T18BG52BC02 ELAPSED TIME METER (ETM).
 9. PROVIDE W/E+H RIA15-AAA3-PCPD ANALOG LEVEL DISPLAY & NAMEPLATE MOUNTED ON ENCLOSURE DOOR.
 10. PSH CONTACT OPENS WHEN PRESSURE INCREASES ABOVE SHUTDOWN SETPOINT, STOPPING THE MOTOR. (NC CONTACT OPEN AT 100PSI).

Pre-Fab Small Bore Piping (On Going)	Allied Mechanical	09/06/22 through 09/08/22
Civil work for Electrical	J-4	09/06/22 through 09/08/22
Underground HDPE Piping	J-4	09/06/22 through 09/08/22
Underground Conduit	Allied Electrical	09/06/22 through 09/08/22

We discovered a test well under grade that we will have to route our HDPE piping around and angle the above ground piping to match the shortened distance from well

Underground HDPE piping & Pump Install	J-4	09/26/22 through 09/29/22
Underground conduit and Wire Pulls	Allied Electrical	09/26/22 through 09/29/22

Darren Mack was on-site to witness the start and finish of the test and witnessed the full three hours. We lost 8 #’s of pressure due to starting at a warmer temperature and as the rains came the temperature dropped about 15° thus affecting the HDPE

PROJECT SUMMARY

REPORT DATE	PROJECT NAME	PREPARED BY
10/12/22	Cholla Fly Ash Pond Seepage Project	Jess Edmenson

TODAY'S WORK

Began installing small bore piping and running electrical for the transmitters and switches

Installed concrete for pipe stands

Set Valve boxes for Corp valves underground and compacting backfill

TASKS THAT WE ARE WORKING NOW

TASK	% DONE	DUE DATE	DRIVER	NOTES
Install above ground piping	90%			EW-01,02,03,04 & GSX-1R
Electrical conduit trenching	100%			Geronimo Side / Backfill left
Electrical Control Panel's	100%			7 of 7 on Geronimo Side
HDPE Trenching (Backfill)	90%			Geronimo Side
Well Pump Install	100%			Geronimo Side

MATERIAL RECEIVED OVERVIEW

	Mini-excavator				
TIME	DESCRIPTION OF WORK PERFORMED				
7/20/2022					
10am	Team assembled at the Hunt trench location, near the sump.				
10-2pm	<p>J-4 excavated a total of 4 test pits with the mini-ex. Three of these pits were along the Hunt seepage trench (TP-1 through TP-3 in order along the trench from the sump headed east). TP-4 was located south of the trench (southeast of the sump). The collection trench and pipe were encountered in all 3 test pits along the trench alignment, but groundwater was only encountered in TP-2, at ~8.5' below grade, which later rose to about ~6.3' below grade (when measured a couple hours after digging pit). An APS employee was onsite in the early afternoon to measure elevation readings and locations of each test pit. After this information was collected TP-1 and TP-4 were backfilled at the direction of Wood and TP-2 and TP-3 were left open overnight to see if there would be any addition seepage of groundwater into those trenches. Allied was directed to establish</p> <p><u>Survey Information, in sequence excavated:</u></p> <p><i>TP-1</i> Ground surface at SW corner: N. 148913.699; E. 669632.109; Elevation: 5030.0 Top of pipe elevation: 5062.2</p> <p><i>TP-2</i> Ground surface at NE corner: N. 1428753.516, E. 669830.406, Elevation: 5032.9Top of pipe: - 3.2' or Elevation ~5029.7 Groundwater: -6.3' or Elevation ~5026.6</p> <p><i>TP-3</i> Ground surface at NW corner: N. 1428672.905, E. 669930.967, Elevation: 5036.0 Top of pipe: - 7' or Elevation ~5029.0 Bottom of TP: -9' or Elevation ~5027.0</p> <p><i>TP-4</i> Ground surface at SW corner: N.1428890.196, E. 669607.036, Elevation: 5030.0 Bottom of TP: - 8.2 or Elevation ~5021.8</p>				

DAILY FIELD RECORD (continued)

Page 2 of 2

Project and Task Number:

Date: 7/21/2022

TIME	DESCRIPTION OF WORK PERFORMED
9am	B. Weaver and K. Tahghighi returned to the Hunt trench to inspect TP-2 and TP-3 along with Allied personnel (name not recorded). In TP-2 groundwater in the pit had risen about 6 inches to approximately 5'9 inches below the ground. No picture was taken. There was no groundwater present in TP-3. Allied was directed by Wood to refill both holes.

TP-1 on 7/20/2022

TP-2 on 7/20/2022, 11:35am

TP-3 on 7/20/2022

TP-4 on 7/20/2022

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

September 1, 2022

People Onsite:

- Wood: Darren Mack
- APS: Steven (Milo) Nicholson
- Allied: Jesse Edmensen, Jack, Quinten
 - J4: Joe, Carlos

Activities

- Electrical trenching
- HDPE trenching
- Backfilled portion of electrical trench to be able to drive across (placed warning tape)
 - Will get sand and back fill correctly after

Field Notes

- Found buried unmarked monitoring well approx. 16' East of EW-04
 - Not sure if abandoned or in use – need to verify
 - Need approval on how to move forward – bury, leave lid/cover exposed, etc.
 - Will need to bend HDPE to avoid this well
- Unmarked utility from GSX-3 sump
 - 6" fiberglass tubing (TRANSITE – AVOID) PLACE RIBBON/tracer wire ABOVE FOR FUTURE DIGGING/WARNING) *yellow tape stating asbestos
 - Approx. 2' below grade – electrical can go over and HDPE go under (USE INSULATION OR BLANKET)
- North-South seepage trench is more west than shown on plans, approx. 3' wide with standing water at 2' below grade. HDPE will need to go over. Can place fabric between gravel and HDPE
- Electrical trench from EW-02 curved East to existing PDP-24A2, no 90 bend like on plans (field fit is ok)
- Allied wants to 45 out of EW-04 to avoid existing trench/fabric to north – will send photos and ask for approval (field fit is ok)
- Allied wants to tie in vertically at GSX-1 instead of horizontally – will send photos and ask for approval
- Who is representative for air pressure testing? What are req's? what pressure is expected?
- Jess mentioned some kickback with pump manufacturer, they don't recommend this pump for this purpose, they recommended an environmental pump
 - Milo brought up the pumps used at 4 corners that are working well– can provide the submittals for those
 - Working on this TBD from URS

Action Items

- Wood (Darren) to send email with photos of unknown monitoring well to everyone to get approval for next steps
- Allied to send RFIs or at least emails asking for approval if any deviations from plans

Outstanding RFIs

- Two outstanding RFIs

- Submittal to change small carbon use to Stainless Steel – Jess submitted these a couple weeks back – asked to resend to get an answer ASAP
- Submittal about connections from new wells to existing feed line. It is 5' deep, Jess submitted RFI about possible connection on 8/31/22

Main Photos:

Fly Ash Pond Seepage Interception System CHOLLA Generating Station Wells Pump Installation-APS Contract CHC08903 Field Visit Notes

September 15, 2022

People Onsite:

- Wood: Darren Mack
- Allied: Welders and Electrical

Activities

- Welding 8" to 10" adapters
- Control panels

Field Notes

- No civil work – rained out
- Welded 8" to 10" adapters
- Located main HDPE feed line approx. 4' below grade
- 1 control panel remaining to install – posts are set

Outstanding RFIs

None

Photos:

8" to 10" adapter

looking east – HDPE and conduit trench

Located HDPE feed line

electrical tie into box

Fly Ash Pond Seepage Interception System CHOLLA Generating Station Wells Pump Installation-APS Contract CHC08903 Field Visit Notes

September 21, 2022

People Onsite:

- Wood: Darren Mack
- APS: Milo, Kurt
- Allied: Quinten, Jess
 - JBar4: Joe, Carlos

Activities

- Pressure testing at EW-01
 - Held 141psi for the 3-hour test (held overnight for about 28hrs total)
- Pressure testing at EW-02
 - Started at 142psi, dropped 1psi after 2 hours
 - Changed to 2-hour duration due to lightning
- Excavating for HDPE tie in for EW-03

Field Notes

- Electrical trench on North side instead of South side
- Brass connection into main feed line to be corrosive wrapped and photo verified the valve is open before backfilling
- J4 may start on Hunt side in next 2 weeks
- Approx. 90LF of foam insulation board to be used for shallow HDPE trench from EW-04

RFIs

- Insulation board for pipe burials less than 3-ft
- PVC Shroud

Photos:

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

September 22, 2022

People Onsite:

- Wood: Darren Mack
- APS: Milo, Kurt
- Allied: Quinten, Jess, Dave
 - JBar4: Joe, Carlos Jesus

Activities

- Pressure testing at EW-02
 - Started at 142psi, dropped 1psi after 2 hours (done on 9/21/22)
 - Was 133psi 21 hours after test started (checked morning of 9/22/22)
- HDPE tie in trench for EW-03
 - Slow digging to go across 2 existing diagonal electrical conduits
 - Tie into feed line will be below an existing electrical conduit not marked on plans
- Pressure testing at EW-03
 - Started at 140psi (was sunny weather and pipe was warm)
 - After 3 hours was at 132psi (15-degree weather drop)
 - Back to 135psi after storm at 3 hours 30mins
- Backfilled some of EW-01 and EW-02 and electrical trench from EW-01
 - Placed tracer wire above pipe
- All conduit placed from EW-01 to Hunt/Geronimo tie in pipes

Field Notes

- More PVC conduit delivered for the mag meter trench
- Electrical conduit running below feed line – may be abandoned as it does not tie into PDP-24A2

Questions

- Crossing seepage trench from EW-04 on south side of conduit and going through seepage trench at 3' if no pipe found
 - This avoids insulation and elevations changes requiring ARVs
 - Will hand dig seepage trench to see if they find an existing pipe
- Possible RFI about the well head detail
 - As of now, it can be installed to plan, but any future maintenance will be a pain
 - Having the screw off the flange will twist the wires/turn pump
 - Allied/J4 suggesting having 2 holes through flange to be able to pull without twisting entire flange

RFIs

- NONE

Photos:

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

October 6, 2022

People Onsite:

- Wood: Darren Mack
- Allied: Quinten, Jess,
 - JBar4: Joe, Carlos

Activities

- EW-01 and EW-02 both pumps set and capped
 - Working on above ground piping
- EW-03 finished setting pump
- Set GSX-1R pump and capped
- Pressure tested Hunt HSX-1
 - Lost 5psi after 3 hours (temperature drop from storm)

Field Notes

- Trench from EW-04 to GSX-1R backfilled
- Electrical trenches backfilled
- HDPE trenches almost complete
 - Connections to main feed left exposed for new valve boxes

Questions

- NONE

RFIs

- NONE

Photos:

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

October 11, 2022

People Onsite:

- Wood: Darren Mack
- Allied: Quentin
 - JBar4: Joe, Carlos, others
 - Speedie & Associates

Activities

- Setting risers and valve boxes at HDPE main feed tie ins
- Back filling in lifts and compacting
- Compaction testing being done by Speedie
 - Took samples and readings for compaction
 - Will have results 10/12 morning
 - JBar4 stopped increasing lifts incase compaction is not adequate – will continue 10/12
- Above ground piping being installed on GSX-1R

Field Notes

- Above ground piping done on EW-01, EW-02 and EW-03
- Pump set on EW-04
- Concrete should be poured 10/12 for pipe support footings
- JBar4 will finish their work next week
 - This includes the fencing
- Believe start up activities will be first week of November

Questions

- NONE

RFIs

- NONE

Photos:

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

November 3, 2022

People Onsite:

- Wood: Darren Mack
- Allied: Quentin
 - Mountain West: Milo

Activities

- Heat tracer and insulation being done on all above ground piping
 - Existing equipment completed
 - New wells insulating today
- Reviewing startup and commissioning checklist plan

Field Notes

- Fencing to start next week, 11/7
- Formal startup/commissioning likely week of 11/14
- GSX-3 failure from 10/27
 - Was a weak pump and when pulled it was clogged
 - Up and running now
- Hunt side was difficult this week, few late nights due to working in shifts

Questions

- NONE

RFIs

- NONE

Photos:

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

November 9, 2022

People Onsite:

- Wood: Darren Mack

Activities

- Heat tracer and insulation still being done on all above ground piping
- No fencing started yet
 - Several weeks out for completion, hopefully will start next week
- Looked at Hunt side wells, heat tracing and insulation done there
- Will meet with Milo on 11/16 to walk through the startup and commissioning plan documents

Field Notes

- Fencing to hopefully start next week, 11/14
- EW-01: still working on insulation, heat tracing done
- EW-02: still working on insulation, heat tracing done
- GSX-4: still working on insulation, heat tracing done
- EW-03: done with insulation and heat tracing
- GSX-3: done with insulation and heat tracing
- GSX-1R: done with insulation and heat tracing
- EW-04:: done with insulation and heat tracing
- Hunt-A: done with insulation and heat tracing
- HSX-1: done with insulation and heat tracing

Questions

- NONE

RFIs

- NONE

Photos:

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

November 16, 2022

People Onsite:

- Wood: Darren Mack
- Allied: Quentin
- Mountain West: Milo

Activities

- Met with Milo to walk through the startup and commissioning plan documents
 - Wells are not ready for commissioning
- Noticed leaks at ARVs on wells
 - EW-01 and EW-03 leaking the most
 - Will attach hoses to route water away from well/footings
 - Will remove the insulation and redo it

Field Notes

- Fencing still hasn't started
- EW-01: leaking at ARV
- EW-03: leaking at ARV
- GSX-3: leaking at
- Hunt/Geronimo combined flowmeter: ARV leaking and was in off position
- Hunt flowmeter: ARV leaking and was in off position
- Will install concrete collar around the valve caps at EW-01, EW-02, and EW-03 to protect from vehicles
- Will fill in the fenced areas with gravel

Questions

- NONE

RFIs

- Allied will be submitting an RFI to install a vertical check valve to fix ARV leakage
 - Not 100% sure this is what will fix this

Photos:

EW-01 leaking

Valve cap/boxes that will need concrete collars

Leaking at EW-03

Leaking at GSX-3

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

November 17, 2022

People Onsite:

- Wood: Darren Mack, Doug Fisher, Andrea Kagie-Kay, John Epsta, Brad, Leo
- APS: Pamela Norris, Cody Miller, Caleb, and Jeremy
- Allied: Quentin
- Mountain West: Milo

Activities

- Met with APS personnel, walked through the BAP areas to inspect existing conditions
- Walked through Geronimo wells to see electrical panels and wells status
- Opened the ARVs at Hunt flowmeter, EW-01 and EW-03
 - Hunt flowmeter was not dirty, perhaps float was set off, no longer leaking
 - EW-01 had HDPE filings packed into the ARV, cleaned it out and reset the float, no longer leaking
 - EW-03 also had HDPE filings as well as mud, cleaned out and no longer leaking
 - Allied is to open the remaining ARVs and inspect, and clear out the lines of any debris
- Removed the insulation at GSX-3 to find where the leak was coming from
 - Leak was at the union, tightened the union and no longer leaking

Field Notes

- Fencing still hasn't started
- EW-01 and EW-03 were not leaking once cleaned out and opened
- GSX-3 was not leaking after tightening the union in the piping

Questions

- NONE

RFIs

- Allied will be submitting an RFI to install a vertical check valve to fix ARV leakage

Photos:

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

December 07, 2022 & December 8, 2022

People Onsite:

- Wood: Darren Mack
- Allied: Quentin
- Mountain West: Milo

Activities

- Met with Milo to do a final walk down of the equipment to ensure all punch list items were resolved
- Working on commissioning documents
- Went through flowmeter totalizers and pump run times

Field Notes

- Fencing still hasn't started (12/13)
- Hunt-A ARV leaking steady water
 - Allied to remove insulation, clean out ARV, and replace insulation
- Allied to start working on grading and restoring the site to prior conditions
- Outstanding punch list items are fencing, gravel inside the fenced areas, replacing all paper manuals that were destroyed by sun, hoods for control panels, and fix painting of equipment
- WSP/APS haven't seen the soil compaction/testing results, Allied to share the data for final commissioning report
- Final walk thought likely second week of January (1/11 or 1/12)

EQUIPMENT	DEPTH (FT)	RUN TIME (HR)	FLOW TOTAL (GAL)
EW-01	22.5	327	18,531
EW-02	17.6	271	44,831
GSX-4	.6	530	152,383
EW-03	18.5	485	59,650
GSX-3	.3	104	22,381
GSX-1R	18.3	625	15,939
EW-04	17.4	528	40,267
HUNT-A	1.0	246	10,909
HSX-A	36.6	672	83,941
HUNT FLOWMETER			463,283
COMBINED FLOWMETER			95,780

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

December 22, 2022

People Onsite:

- Wood: Darren Mack
- Allied: Quentin

Activities

- Met with Quentin to do last walk through of control panels and well settings/controls to complete commissioning documents
- Went through punch list items that have been completed and the ones that are still outstanding

Field Notes

- Fencing started; posts are all set – working on chain link on Geronimo side
 - Should be completed by end of next week
 - Allied wasn't aware of the vehicle gates on BAP side, showed him TWX fencing document to show what was expected to be done
- ARVs are needed to be cleaned out periodically due to debris from pumped water
 - Not sure if this is a design flaw or if the water is dirtier than expected but this should be part of O&M
 - Allied to remove insulation, clean out ARV, and replace insulation
- Grading of site and gravel placed, there will be another batch of gravel down to complete the road
- For the existing monitoring wells, the gravel will be raked away from the covers to keep them exposed so they will not be lost
- Outstanding punch list items are fencing, replacing all paper manuals that were destroyed by sun, hoods/covers for control panels, and suspending the cables at GSX-3 so they are not resting on the sump cover
- Final walk through/APS turnover likely second week of January (1/11 or 1/12) – Milo to schedule once he approves the completion of punch list items

Future Design Items

- Include covers, hoods on the control panels
- Different ARV to avoid the debris/leaking issues
- Include a check valve or ball valve on vertical of wells so they can isolate system in case of maintenance on ARV
- Make the entire system either flanged or welded, not back and forth. Will make easier for construction

Fly Ash Pond Seepage Interception System

CHOLLA Generating Station

Wells Pump Installation-APS Contract CHC08903

Field Visit Notes

January 18, 2023

People Onsite:

- WSP: Darren Mack
- Allied: Quentin
- APS: Kurt Adams, Cody Miller
- Mountain West: Milo Nicholson

Activities

- Final walkdown with Allied and APS personnel
- Construction/labor signed off on – Allied has until 2/6/23 to get all documentation done

Future Design Items (BAP)

- Include covers, hoods on the control panels to protect from UV
 - Make control panels face north
- Different ARV to avoid the debris/leaking issues
- Include a check valve or ball valve on vertical of wells so they can isolate system in case of maintenance on ARV
- Don't reuse old material (control panel supports), try to make all new material to not mix old with new
- Pipe supports to support below pipe, can use a U-clamp so insulation will no on better
- Insulation to be called out to be done like final FAP wells
- Control panels were properly sized, may need to be larger if there is a SCADA system that automates readings
- Specs to include gravel inside of the fenced areas, concrete collards around T-boxes, existing well caps, etc.
- All concrete to be domed, no flat concrete to be spec'd
- Reference all RFI's from FAP project and use in specs to eliminate future back and forth
- Include a thermostat with light for heat tracing

Questions

1 GENERAL SITE INFORMATION

Equip two new wells (CM-01 and CM-02) with pumps, flow regulators, flow meters, valves, piping, and all required electrical and instrumentation. Build piping system to take extracted water to Sump 10 through a common header pipe that discharges into a discharge trench for an onsite blow-down operation. The trench discharges into Sump 10.

3 COMMISSIONING PROCESS

The commissioning process for this project has a number of steps to follow and inspect to ensure that each component of this system is working properly. The pump electrical components and configuration should be checked for proper working setup for each well. The piping and well components and appurtenances should be checked prior to operating the pumps. Once the pumps have been set to design working conditions and the electrical components are working as designed, the operation of the entire system should be evaluated to ensure it is operating in compliance with the project goals. Refer to the Operations and Maintenance Manual for details on the model types, operation, and settings for each component.

4 EQUIPMENT STARTUP CHECKLISTS

The following items should be completed as part of project commissioning and start-up. Contractor is responsible to coordinate with the APS Staff and the Manufacturer to ensure proper start-up and testing are performed per the specifications and per Manufacturer requirements. In addition, the Contractor is responsible to ensure all auxiliary components are functioning properly through installation and start-up procedures.

4.1 ELECTRICAL COMPONENTS

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
EW-01	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Circuit breaker inspected without issue
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac
EW-02	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Circuit breaker inspected without issue
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac
EW-03	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Quentin Scott (Allied Power) Circuit breaker inspected with no issues found
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac
EW-04	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Circuit breaker inspected without issue
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac
GSX-1R	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Circuit breaker inspected without issue
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac
GSX-3	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Circuit breaker inspected without issue
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
GSX-4	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Circuit breaker inspected without issue
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac
HSX-1	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Circuit breaker inspected without issue
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac
Hunt-A	Visual and mechanical inspection of fusible disconnect switch	12/1/22 Circuit breaker inspected without issue
	Visual and mechanical inspection of control panel and components	12/1/22 Control panel inspected without issue
	Panel Power supply function test	L1 & L2 to ground - 123vac L1 to L2 - 247vac

4.2 PIPING/TRENCH/FENCE COMPONENTS

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
Geronimo Piping	Piping Installation (materials and size)	HDPE - 2" / PVC 1" (GSX-4)
	HDPE Joints and fusion checked? Per ASTM F2620 standards	12/1/22 Verified followed
	Bury depth adequate?	12/1/22 Verified met project directives
	Tracer wire and underground warning tape installed. Tracer wire tested?	12/1/22 Verified complete
	Air and vacuum release valves on high spots?	12/1/22 Verified met project design
	Above ground piping insulated?	12/5/22 Verified complete
	Leak testing performed?	12/1/22 Verified complete
Geronimo Trenching	Trenching backfill gradation and plasticity index test per 1000 cubic yards or soil type received?	12/1/22 Complete (test results furnished)
	Compaction tests per 100 cubic yards or three tests per shift results received and are acceptable?	12/1/22 Complete (test results furnished)
	Excavation returned to original condition?	12/1/22 In progress
	Road crossings repaired to original surface?	

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
Geronimo Fencing	EW-01: Installed to specification, grounded, out of traffic?	12/8/22 Not complete
	EW-02: Installed to specification, grounded, out of traffic?	12/8/22 Not complete
	GSX-4: repaired to specification, grounded, out of traffic?	12/8/22 Not complete
	EW-03, GSX-1R, GSX-03 Area: repaired to specification, grounded, out of traffic, drive through gates operational and all components accessible around gates?	12/8/22 Not complete
	EW-04: Installed to specification, grounded, out of traffic?	12/8/22 Not complete
Hunt Piping	Piping Installation (materials and size)	HDPE - 2"
	Joints and fusion checked? Per ASTM F2620 standards	12/1/22 Verified followed
	Bury depth adequate?	12/1/22 Verified met project directives
	Tracer wire and underground warning tape installed. Tracer wire tested?	12/1/22 Verified complete
	Air and vacuum release valves on high spots?	12/1/22 Verified complete
	Above ground piping insulated?	12/1/22 Verified complete
	Leak testing performed?	12/1/22 Verified complete
Hunt Trenching	Trenching backfill gradation and plasticity index test per 1000 cubic yards or soil type received?	12/1/22 Complete (test results furnished)
	Compaction tests per 100 cubic yards or three tests per shift results received and are acceptable?	12/1/22 Complete (test results furnished)
	Excavation returned to original condition?	12/1/22 In progress
Hunt Fencing	HSX-01: repaired to specification, grounded, out of traffic?	12/1/22 Not complete
TWX Area Fencing	Repaired to specification?	12/1/22 Not complete

4.3 PUMPS & APPURTENANCES

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
EW-01 Appurtenances	Pump Grundfos SQ pump w/ ½-hp motor capable of 1.5 gpm average	12/1/22 Verified project gpm average
	Pump shroud installed?	10/4/22 Verified complete
	Pump depth set: 53' specified	12/1/22 52' 10"
	Pressure transducer set depth: 49.2' specified	12/1/22 49' 10"
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Level indicator settings adjustment to field conditions	11/30/22 Verified correct
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 1.5, 1.0, 0.75 gpm	12/1/22 Verified 1.0 gpm
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete
	Insulation and heat trace installed	12/1/22 Verified complete
Pressure gauge and switch assembly functioning?	12/1/22 Verified complete	

EW-02 Appurtenances	Pump Grundfos SQ pump w/ ½-hp motor capable of 5 gpm average	12/1/22 Verified project gpm average
	Pump depth set: 51' specified	12/1/22 52'
	Pressure transducer set depth: 47.2' specified	12/1/22 49'
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Level indicator settings adjustment to field conditions	11/30/22 Verified correct
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 5.0, 4.0, 3.0 gpm	12/1/22 Verified 4.0 gpm
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete
	Insulation and heat trace installed	12/1/22 Verified complete
	Pressure gauge and switch assembly functioning?	12/1/22 Verified complete

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
EW-03 Appurtenances	Pump Grundfos SQ pump w/ ½-hp motor capable of 5 gpm average	12/1/22 Verified project gpm average
	Pump depth set: 50' specified	12/1/22 49'
	Pressure transducer set depth: 46.2' specified	12/1/22 46'
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Level indicator settings adjustment to field conditions	11/30/22 Verified correct
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 5.0, 4.0, 3.0 gpm	12/1/22 Verified 4.0 gpm
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete
	Insulation and heat trace installed	12/1/22 Verified complete
Pressure gauge and switch assembly functioning?	12/1/22 Verified complete	

EW-04 Appurtenances	Pump Grundfos SQ pump w/ ½-hp motor capable of 2.5 gpm average	12/1/22 Verified project gpm average
	Pump depth set: 22' specified	12/1/22 22' 2"
	Pressure transducer set depth: 18.2 specified	12/1/22 19' 2"
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Level indicator settings adjustment to field conditions	11/30/22 Verified correct
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 2.0, 1.5, 1.0 gpm	12/1/22 Verified 1.5 gpm
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete
	Insulation and heat trace installed	12/1/22 Verified complete
Pressure gauge and switch assembly functioning?	12/1/22 Verified complete	

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
GSX-1R Appurtenances	Pump Grundfos SQ pump w/ ½-hp motor capable of 0.75 gpm average	12/1/22 Verified project gpm average
	Pump depth set: 52' specified	12/1/22 50' 10"
	Pressure transducer set depth: 48.2' specified	12/1/22 47' 10"
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Level indicator settings adjustment to field conditions	11/30/22 Verified correct
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 1.0, 0.75, 0.5 gpm	12/1/22 Verified .75 gpm
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete
	Insulation and heat trace installed	12/1/22 Verified complete
Pressure gauge and switch assembly functioning?	12/1/22 Verified complete	

GSX-3 Appurtenances	Pressure transducer set depth: 8' specified	12/13/22 Verified 9' 8"
	Existing Pump operational	12/1/22 Verified operational
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 20, 25 gpm	12/1/22 Verified 25.0 gpm
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete
	Insulation and heat trace installed	12/1/22 Verified complete
	Pressure gauge and switch assembly functioning?	12/1/22 Verified complete

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
GSX-4 Appurtenances	Pressure transducer set depth: 8' specified	12/13/22 Verified 11' 10"
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Pump operational?	12/1/22 Verified operational
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 20, 25 gpm	12/1/22 Verified 25.0 gpm
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete
	Insulation and heat trace installed	12/1/22 Verified complete
	Pressure gauge and switch assembly functioning?	12/1/22 Verified complete

HSX-1 Appurtenances	Pressure transducer set depth: 41.2 specified	12/1/22 Verified 41' 2"
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 10.0, 11.0, 12.0 gpm	12/1/22 Verified 11.0 gpm
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete
	Insulation and heat trace installed	12/1/22 Verified complete
	Pressure gauge and switch assembly functioning?	12/1/22 Verified complete

ITEM	DESCRIPTION	DATE CHECKED/ RESULTS/NOTES/NA
Hunt-A Appurtenances	Pressure transducer set depth: 7' specified	12/13/22 Verified 5' 6"
	Pressure transducer 4-20 mA / span settings checked	11/30/22 Verified correct
	Flowmeter installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed correct direction?	12/1/22 Verified correct flow direction
	Flow regulator valve installed flow rating: 15, 20 gpm	12/1/22 Verified 20.0 gpm
	3-way ball valve function	12/1/22 Verified without issue
	Start-up position straight flow-through position	12/1/22 Verified without issue
	90-degree sampling position works	12/1/22 Verified without issue
	Isolation ball valve exercised	12/1/22 Complete
	Air/vacuum valve w/ isolation ball valve exercised	12/1/22 Complete

**CHC08903 Fly Ash Seep project
Punch List of Incomplete Items**

Item #	Item Name	Item Description	Spec Sections or Drawing Number	Created By	Creation Date	Assigned To	Complete Date	Status
1	Geronimo side	Various condulets need covers and gaskets		DB	11/13/22	Allied	11/30/22	Complete
2	PDP 24A12	Main breaker need cover blank installed		DB	11/13/22	Allied	12/1/22	Complete
3	Hunt A	Install ground wire - unistrut to panel		QS	11/13/22	Allied	12/1/22	Complete
4	HSX-1	Install ground wire - unistrut to panel		QS	11/13/22	Allied	12/1/22	Complete
5	EW-1	Install ground rod & wiring		QS	11/13/22	Allied	12/5/22	Complete
6	PDP 24A12	Label breakers		DB	11/13/22	Allied	11/30/22	Complete
7	Pump pressure switches	Set all pump discharge pressure switches to N.O at 100psi		QS/DB	11/13/22	Allied	11/30/22	Complete
8	Hunt A	Reroute heat trace under insulation blanket		QS	11/13/22	Allied	11/30/22	Complete
9	Above ground piping insulation	Revise top insulation cones (standardize)		MWC	11/30/22	Argus	12/1/22	Complete
10	Above ground piping insulation	Use 90 degree installations where available		MWC	11/30/22	Argus	12/1/22	Complete
11	Above ground piping insulation	Revise installation where in contact with unistrut		MWC	11/30/22	Argus	12/1/22	Complete
12	Panel electrical receptacles	Check plugs for wiring integrity and polarity		MWC	11/30/22	Allied	12/1/22	Complete
13	Above ground piping insulation	Install insulated blankets on valves, mag flows, ARV, etc.		MWC	11/30/22	Argus	12/1/22	Complete
14	Pump controls panels	Remove/replace paper manuals		MWC	11/30/22	Allied	12/1/22	Complete
15	Well sounding tubes	Install pipe caps on each well sounding tube port		MWC	11/30/22	Allied	11/29/22	Complete
16	Magnetic flowmeters	Verify grounding rings necessity with manufacturer (Rosemount)		MWC	11/30/22	Allied	12/5/22	Complete
17	Well casings	Paint above ground well casings including extensions		MWC	11/28/22	Allied	12/1/22	Complete
18	Common header valves	Protect and identify (3) underground valve boxes		WPS	11/30/22	Allied	12/1/22	Complete
19	Grade project area	Grade out ruts in pump areas & roadway		Allied	12/5/22	JBar4	12/16/22	Complete
20	Install fencing	Install individual pump enclosure fencing		Allied	Scope	JBar4	12/16/22	Complete
21	Flowmeter supports	Install pipe supports on Hunt & Combined flowmeter piping		Allied	Scope	Allied	12/1/22	Complete
22	Insulate flowmeter piping	Insulate with metal piping on Hunt & Combine flowmeter piping		WPS	11/28/22	Argus	12/1/22	Complete
23	Above ground piping	Perform blowdown of all piping and devices (remove debris)		Allied	Scope	Allied	12/1/22	Complete

NOTES

All dimensions are approximate

BGS - Below Ground Surface

Well depth information - Drawing depth - indicated on project IFC drawings

Well depth information - Actual depth is measured depth and includes 42" for above ground flange for new project pumps (EW-1, EW-2, EW-3, EW-4, & GSX-1R)

Pump depth for (EW-1, EW-2, EW-3, EW-4, & GSX-1R) is from the above ground flange to bottom of pump

Pump depth for (GSX-3, GSX-4, Hunt A, & HSX-1) is from ground to bottom of pump. The project did not install above ground flanges for these pumps

Level transmitter depth (Waterpilot) is from ground level to bottom of probe

Waterpilot level probe assemblies (cables & probes are 60' total length). Probe length is 12" - leaving 59' or 708" total length of assembly. Cables were not shortened and excess cable was rolled up in control panel.

*Feet above transducer

Summary

Came on site to program E&H FMX21 level transducer to a Moore SPA2 and E&H RIA15. First the SPA2 and RIA15 had to be rewired for proper operation. All well FMX 21 were 0-30 PSI, sump FMX21 0-15 psi, set up RIA15 to display in feet above pump. Set the pump on controls based on the static water level of the well. The pump off was set to 6 inches above the transducer for the wells. The sumps the pump off is set for 1" above the transducer.

Allied Power Fly Ash Seep project (CHC08903)

Allied Power Control Panel & Pump check-out plan

(Tuesday - 10/18/22) – Scott, Roubal, and Bittner

- Order of priority
 - EW-1, EW-2, EW-3, EW-4, GSX-1
- Prime pumps (if necessary) – **Not necessary**
- Install level probes in each well on Geronimo side (do not shorten cables, coil up excess in control panel) – **Complete**
- Install hose on sample nipple and route to nearest sump - **Complete**
- Set motor overload relay to 6.4 amp setting - **Complete**
- Verify CB-2 is open - **Complete**
- Verify CB-3 is open - **Complete**
- Close main breaker at PDP
 - Verify incoming voltage in panel is normal – **121vac**
- Close CB-1 – check voltage – **121vac**
- Bump pump in Hand – **Complete**
 - Make sure contactor picks up
- Run pump in hand and monitor discharge at hose – **Complete**
- Record pump amps while running
 - **EW-1 – 1.8 amps**
 - **EW-2 – 2.0 amps**
 - **EW-3 – 1.9 amps**
 - **EW-4 – 2.0 amps**
 - **GSX-1 – 1.9 amps**
- Record pump flow on flowmeter
 - **EW-1 – 7.6 gpm**
 - **EW-2 – 1.45 gpm**
 - **EW-3 – 3.81 gpm**
 - **EW-4 – 1.54 gpm**
 - **GSX-1 – .73 gpm**
- Record pump discharge pressure
 - **EW-1 – 38 psi**
 - **EW-2 – 41 psi**
 - **EW-3 – 20 psi**

- EW-4 – 50 psi
- GSX-1 – 18 psi
- Put switch in Auto – **Complete**
 - Check voltage at 1A
 - Jumper 1A to 1B
 - Check voltages at CM1 – **120vac at all pumps**
- Turn switch to Off – **All steps complete**
 - Leave jumper on 1A to 1B
 - Jumper CM1 to NO2
- Turn switch to Auto – **Complete with no issues**
 - Pump should start
 - Check discharge at hose
- Turn H-O-A switch to Off – **Complete**

Wednesday (10/19/22) - - Scott, Roubal, and Bittner

- Order of priority
 - GSX-3 & GSX-4
- Prime pumps (if necessary) – **Not necessary**
- Install level probes in each well (do not shorten cables, coil up excess in control panel) – **Complete**

- Bump pump in Hand
 - Make sure contactor picks up – **Complete**
- Run pump in hand and monitor discharge at hose – **No issues found**

- Record pump amps while running
 - Hunt A – 9.2 amps
 - HSX-1 – 9.5 amps
- Record pump flow on flowmeter
 - Hunt A – 13.5 gpm
 - HSX-1 – 4.87 gpm
- Record pump discharge pressure
 - Hunt A – 52 psi
 - HSX-1 – 38 psi
- Put switch in Auto – **All complete with no issues found**
 - Check voltage at 1A
 - Jumper 1A to 1B
 - Check voltages at CM1
- Turn switch to Off – **All complete with no issues found**
 - Leave jumper on 1A to 1B
 - Jumper CM1 to NO2
- Turn switch to Auto – **All complete with no issues found**
 - Pump should start
 - Check discharge at hose
- Turn H-O-A switch to Off - **Complete**

Monday (10/24/22) – Mere (IAC), Scott, and Bittner

Mike Mere (Instrument & Controls) technician arrived around 9am. The level controls for all nine (9) new pump controls panels were calibrated during his visit

- Program and set up level controls (Moore relay and Waterpilot probes)
 - EW-1
 - EW-2
 - GSX-4
 - GSX-3
 - GSX-1
 - EW-3
 - EW-4
- After settings downloaded, simulated pump on and pump off. Went well with no issues
- As left settings (saved in 7705 – Capital – Seep 2022)

Tuesday (10/25/22)

- Finished all set up and level control checkout – Mere (IAC) left site in early afternoon

- Programmed Hunt A & HSX-1 level controls at Kelly building to be installed 10/31/22 week

Wednesday (10/26/22)

- Took full LOTO
 - Geronimo side five new pump underground discharge valves
 - Main Hunt breaker
 - Valve (existing piping on west end below Fly Ash dam)
 - GSX-3 valve
 - GSX-3 & GSX-4 control panel breakers
- Cutover new piping (existing pump discharge to common header) on GSX-3 & GSX-4
- Installed blind flanges on abandoned underground discharge piping
- Cutover power feeds to new control panels for GSX-3 & GSX-4
- GSX-3 would not run, troubleshooting indicated bad pump

Thursday (10/27/22)

- Clean up of area and verification

Monday (10/31/22)

- Argus began insulating on the Geronimo side

Tuesday (11/1/22)

- Took full LOTO
- Installed HSX-1 control panel
- Tied in HSX-1 piping to header
- Removed bad pump on GSX-3. Used separate work order (CH964064)
- Argus continued insulating Geronimo side

Wednesday (11/2/22)

- Took full LOTO
- Installed Hunt A new control panel
- Tied in Hunt A piping to header
- Finished pump changeout on GSX-3 (CH964064)

W-307R AND M52A AQUIFER
TESTING TECHNICAL
MEMORANDUM

TECHNICAL MEMORANDUM

To: Arizona Public Service Company **Project No.** 14-2022-2029
400 N. 5th Street
Phoenix, Arizona 85004

By: Brenden Enos, PG **Reviewed by:** Rebecca Weaver, PE

Date: January 17, 2024

Re: **W-307R and M-52A Aquifer Testing, Bottom Ash Pond**
Cholla Power Plant – Navajo County, Arizona

INTRODUCTION

This technical memorandum documents the performance and analysis of aquifer tests conducted by WSP Environment and Infrastructure, Inc. (WSP) at wells W-307R and M-52A. The monitoring wells are located hydraulically downgradient of the Arizona Public Service Company (APS) Cholla Power Plant (Site) Bottom Ash Pond (BAP) in Navajo County, Arizona (**Figure 1**). The aquifer tests were conducted as part of the BAP Pre-design Studies, which are being done to support the selection and design of the groundwater remedy for the BAP, to satisfy the corrective action requirements detailed in 40 Code of Federal Regulations (CFR) Sections (§) 257.90 through 257.98 (herein referred to as the Coal Combustion Residuals [CCR] Rule, Federal Register, 2020).

SITE BACKGROUND

CCR groundwater monitoring system and historical operational information is presented in the *Annual Groundwater Monitoring and Corrective Action Report for 2023* (WSP, 2024). The BAP is one of four CCR units at the Site. The BAP is an unlined surface impoundment that receives slurried bottom ash from the plant. The BAP was constructed between 1976 and 1978 in an ephemeral surface water channel that formerly discharged into Tanner Wash. The BAP dam is comprised of southern and eastern dams operating as one dam system. The BAP dam system was primarily constructed on top of the Tanner Wash Alluvium (Alluvium), which consists of heterogeneous and laterally discontinuous layers of clay, sand, and gravel, and the Moenkopi Moqui formation (Moqui), which is a mudstone that acts as the primary confining unit below the Alluvium. Additionally, portions of the eastern dam were constructed on the Moenkopi Holbrook formation (Holbrook), and the Chinle formation (Chinle), which are both relatively permeable sandstone units that overlie the Moqui.

The BAP dams have a clay core that extend through the alluvium to bedrock where the alluvium was less than 20 ft thick at the time of dam construction. In regions where the alluvium was greater than 20 ft thick, a cutoff wall was constructed that generally extended to bedrock. However, due to the depths involved, the cutoff wall does not extend to bedrock in the middle of the channel underlying the southern dam. There is an approximately 30 to 40-ft thick layer of alluvium below the base of the cutoff wall in this region.

Water from the BAP seeps through below the clay core of the southern and eastern dams and below the cutoff wall in the southern dam along preferential pathways located within the Alluvium, Holbrook, Chinle, and likely within weathered sections of the upper portions of the Moqui. This seepage migrates to portions of the Tanner Wash Alluvial basin located downgradient of the BAP, where it infiltrates the uppermost aquifer within the Alluvium and upper portions of the Moqui. While the Moqui is the primary confining unit beneath the Alluvium, weathered sections of the upper part of the unit located downgradient of the BAP are observed to be saturated and hydrogeologically connected to the overlying alluvial aquifer. Groundwater in the uppermost aquifer downgradient of the BAP generally flows to the southwest along the footprint of Tanner Wash.

PURPOSE

The Pre-design Studies were conducted to collect additional data related to sediment geochemistry, groundwater quality and aquifer properties to evaluate the effectiveness of potential containment and treatment technologies (including monitored natural attenuation (MNA)) and to aid in updating the Site's numerical groundwater model. This work will allow for a performance evaluation of Corrective Measures (CM) supporting remedy selection and can be used to aid in advancing preferred containment or treatment technologies, or combination thereof.

Aquifer testing was conducted at W-307R in November 2021 as part of the Pre-design Studies to better understand aquifer properties in the central portion of the Tanner Wash Alluvial basin located east and downgradient of the BAP dam. The aquifer testing included the performance of a 36-hour constant-rate test, during which time a pumping rate of 20 gallons per minute (gpm) was sustained. The pumping rate and duration sustained during this aquifer test failed to stress the aquifer in the vicinity of W-307R adequately to evaluate if there are hydraulic barriers, recharge areas or other types of connectivity between the well location and the BAP (and immediately downgradient seep areas) as there were no impacts observed in wells located between the pumping well and the BAP facilities. WSP recommended performing the constant rate aquifer test again at a higher flow rate and for a longer duration, to further evaluate aquifer properties and connectivity between the well location and the BAP (WSP, 2023).

Aquifer testing was also conducted at TDX-5 (formerly referred to as BSX-03) in June 2021 as part of the Pre-design Studies to better understand aquifer properties south of the southern BAP dam, and to evaluate the effectiveness of TDX-5 to intercept seepage from the BAP. The aquifer testing included the performance of a constant rate test, during which time pumping rates varied between 1.4 gpm and 1.7 gpm until the water level at the test well drew down to the pump intake at approximately 10 hours after the test began. The constant-rate test results indicate TDX-5 is likely incapable of supporting a pumping rate greater than 1 gpm.

During the TDX-5 constant-rate test, a drawdown in water level attributed to the aquifer test at TDX-5 was observed at nearby wells M-52A, MW-69A, and MW-70M, which indicates these wells are all hydraulically connected (WSP, 2023). M-52A, located approximately 40 ft north of TDX-5, is completed in the same setting of the alluvial aquifer as TDX-5 (with a screened interval that spans across the contact between the Alluvium and weathered sections of the upper Moqui). Because the two wells are completed approximately in the same lateral and vertical location downgradient of the southern BAP dam, WSP recommended performing aquifer tests at M-52A so that the pumping rates sustained during that test could be compared to those sustained at TDX-5, as no previous aquifer testing was completed at M-52A during its construction (WSP, 2023). If pumping rates sustained during the M-52A aquifer tests proved to be higher than those sustained at TDX-5, then M-52A could be converted to an extraction well to intercept seepage downgradient of the southern BAP dam instead of TDX-5. MW-70M and MW-69A were also observed to be hydraulically connected to TDX-5, however these wells were not considered for evaluation as potential extraction wells due to the location of their well screens within the alluvial aquifer. Specifically, MW-70M is screened only in the Moqui and could potentially miss seepage in the Alluvium from the BAP if it were utilized for seepage collection. The

drawdown response observed at MW-69A during the TDX-5 aquifer test was slower and more delayed than the other observation wells, indicating MW-69A is completed in a portion of the alluvial aquifer that is separated from the portion of the alluvial aquifer in which TDX-5 and M-52A are completed by a leaky-confining layer (WSP, 2023). MW-69A could miss seepage from the BAP in the lower portions of the Alluvium and upper weathered sections of the Moqui if it were utilized for seepage collection.

AQUIFER TEST OBJECTIVES AND DESIGN

Primary objectives for the June 2023 aquifer tests included the following:

- ▶ Calculating aquifer properties downgradient of the BAP (e.g., hydraulic conductivity, transmissivity, storativity), specifically at W-307R, to update the current understanding of aquifer properties in the central portion of the Tanner Wash Alluvial basin near W-307R;
- ▶ Evaluating the potential of converting M-52A to an extraction well;
- ▶ Obtaining specific capacity data for M-52A to assist in pump sizing in the event that M-52A is converted to an extraction well; and
- ▶ Evaluating connectivity between wells downgradient of the BAP (i.e., radius of influence of pumping wells).

The aquifer tests were planned as one constant-rate test at W-307R, and one step-rate test and one constant-rate test at M-52A. The location of W-307R and the observation points for the W-307R constant-rate test are depicted on **Figure 2**. The location of M-52A and the observation points for the M-52A aquifer tests are depicted on **Figure 3**. Construction details for each test well and observation point are summarized in **Table 1**.

DESCRIPTION OF FIELD ACTIVITIES

AQUIFER TEST EQUIPMENT

A 3-inch nominal diameter test pump (Grundfos Model 30 SQE10-130) was used to conduct the aquifer tests at W-307R and M-52A. A PRM Filtration mechanical propeller type flowmeter with totalizer (model 21M-003186) was used to measure test flow rates during the W-307R constant-rate test. Aquifer test flow rates were measured during the M-52A step-rate and constant-rate tests by periodically measuring the time necessary to fill a container of known volume. Observation point water-level data were collected using 15 pounds per square inch gauge (psig) In-Situ Level TROLL[®] 700 pressure transducers with vented cables. Water-levels at test wells were collected using a 30 psig In-Situ Level TROLL[®] 700 pressure transducer with a vented cable and a hand-held water level meter. Groundwater produced during the W-307R aquifer tests was temporarily containerized in a 1,000-gallon (gal) water storage tank located near the W-307R wellhead within the United States Department of the Interior Bureau of Land Management (BLM) easement and transferred to a 12,000-gal water storage tank located near W-304 through a pipeline consisting of flexible hose which was positioned within the BLM easement as outlined in **Figure 1**. Water was then transferred from the 12,000-gal water tank to the BAP via a 12,000-gal water truck. Groundwater produced during the M-52A aquifer test was discharged into the 12,000-gal water truck and transferred to the BAP.

SITE MOBILIZATION

The aquifer tests were conducted between June 12 and 22, 2023. Pre-test activities included constructing the water management systems, collecting background water-level data, and function testing of the pump configurations at

each well. WSP deployed pressure transducers at W-307R observation wells W-304, MW-79A, MW-71A, and MW-73A to record background data at 1-minute intervals prior to the start of aquifer testing at W-307R. Similarly, WSP deployed pressure transducers at M-52A observation wells MW-69A, MW-70M, and TDX-5 to record background data at 1-minute intervals prior to the start of aquifer testing at M-52A.

W-307R TESTING

Constant-Rate Test

The constant-rate test at W-307R was conducted between June 13 and 16, 2023. Prior to starting the test, the static water level (SWL) in W-307R was 19.86 ft bgs. The test pump was installed at approximately 63 ft bgs and the pressure transducer was secured to the pump column for an installation depth of 61.23 ft bgs.

Water level measurements were collected using the pressure transducer at the test well. Collection of manual measurements using a water-level meter was not possible during the constant-rate test due to erroneous instrument readings, which were likely caused by the interference of groundwater cascading through the well screen. The pressure transducers installed at W-304, MW-79A, MW-71A, and MW-73A were restarted prior to the start of the constant rate test to monitor water levels during the constant rate test at W-307R. The pressure transducers were programmed to record at 1-minute intervals. The locations of the observation wells in relation to W-307R are presented in **Figure 2**.

The constant rate test was started at 10:36 am on June 13, 2023. An initial target pumping rate of 30 gallons per minute (gpm) was chosen based on drawdown response observed during the 36-hour constant rate test performed at W-307R in 2021 (WSP, 2023), however, the pumping rate varied between 28 gpm and 32 gpm until the pumping rate settled at 28 gpm at approximately 26 minutes after the start of pumping. The 28 gpm pumping rate was designated as the target pumping rate for the remainder of the constant-rate test to avoid further manual adjustments and potential manipulation of the time/drawdown data. The nominal pumping rate of 28 gpm was successfully maintained for the duration of the constant rate test. The table below summarizes the pumping rate and drawdown observed during the test, and pumping rates are specified on the W-307R Constant-Rate Test Form, included in **Appendix A**.

Table 2 – W-307R Constant-Rate Test Summary

PUMPING RATE (GPM)	PUMPING RATE DURATION (MINUTES)	TOTAL ELAPSED TEST TIME (MINUTES)	DRAWDOWN (FT)
28	4,321	4,321	27.49

Water level drawdown in response to pumping at W-307R during the constant rate test was not observed at any of the observation wells.

After stopping the test, water level was monitored for approximately 4,197 minutes. Water level recovered to over 90% the static water level approximately one minute after the pump was stopped. Drawdown and recovery data recorded at the test well during the constant-rate test is included on **Figure 4** and drawdown and recovery data recorded at the observation wells during the constant-rate test is included on **Figure 5**.

Groundwater Quality Sampling

WSP collected three groundwater samples over the course of the W-307R constant-rate test. Each sample was labeled and placed on ice for transport to Eurofins Environment Testing USA (Eurofins), an Arizona Department of Health-

certified laboratory (AZ0728) for analysis. The samples were analyzed for aluminum, boron, calcium, cobalt, iron, magnesium, potassium, and sodium. Additionally, the last sample collected (CRT3-W307R-0623) was analyzed for chloride, sulfate, and alkalinity. The laboratory analytical report is included as **Appendix B**. Water quality parameters, including temperature, pH, specific conductance, dissolved oxygen, oxidation reduction potential, and turbidity were measured at the time of sample collection. Sample analysis and field parameters results are summarized in **Table 3**.

M-52A TESTING

Step-Rate Test

A step-rate test was conducted at M-52A on June 20, 2023. Prior to starting the test, the SWL at M-52A was measured at 17.82 ft bgs. The test pump intake was installed at approximately 68 ft bgs and the transducer in the pumping well was secured to the pump housing for an installation depth of 63.72 ft bgs.

The step-rate test began at 08:33 am at an initial pumping rate of 1 gpm. The step-rate test was conducted for approximately 123 minutes and consisted of pumping at 1 and 2 gpm in approximate 60-minute intervals. A summary of the step-rate test is provided in the table below, and pumping rates are specified on the M-52A Step-Rate Test Form, included in **Appendix A**.

Table 4– M-52A Step-Rate Test Summary

PUMPING RATE	PUMPING RATE (GPM)	PUMPING RATE DURATION (MIN)	TOTAL ELAPSED TEST TIME (MIN)	DRAWDOWN (FT)
1	1.0	60	60	19.95
2	2.0	63	123	47.75

Drawdown did not stabilize during either the first or the second pumping step. However, drawdown rates significantly reduced at the end of the first step (between 45 minutes after the start of the test until the pumping rate was increased to 2 gpm, at 60 minutes after the start of the test). During this time, the drawdown rates reduced from an average of approximately 0.66 feet per minute (fpm) (between 26 and 45 minutes after the start of the test) to an average of approximately 0.03 fpm (between 45 and 60 minutes after the start of the test). Drawdown data was used from this time period to calculate specific capacity for the well, since drawdown rates were most stable during this time period. The calculated specific capacity for the end of the first step is approximately 0.05 gpm/ft.

The test pump and transducer were left in the well overnight to monitor water-level recovery prior to the start of the M-52A constant-rate test. Drawdown and recovery data recorded at the pumping well during the step-rate test is included on **Figure 6** and drawdown and recovery data recorded at the observation wells during the step-rate test is included on **Figure 7**.

Constant-Rate Test

The M-52A constant-rate test was conducted on June 21, 2023. Prior to starting the test, the SWL was measured at 18.07 ft bgs. A pumping rate of 1 gpm was selected for the constant-rate test since water level drawdown was close to stabilizing at that rate during the step-rate test. The constant-rate test began at 08:24 am and was performed uninterrupted for 8 hours. Water was pumped from the well at a rate of 1 gpm for the first 60 minutes of the constant-rate test, at which point the pumping rate was reduced due to an observed rapid decline in water level. After this

point, pumping rates varied between 0.69 and 0.9 gpm for the remainder of the constant-rate test. Pumping rates and drawdown is summarized in **Table 5** below and are specified on the M-52A Constant Rate Test Form, included in **Appendix A**.

Table 5– M-52A Constant-Rate Test Summary

PUMPING RATE (GPM)	PUMPING RATE DURATION (MIN)	TOTAL ELAPSED TEST TIME (MIN)	DRAWDOWN (FT)
1.0	60	60	21.32
0.9	11	71	22.96
0.8	4	75	23.37
0.76	80	155	29.70
0.68	30	185	31.68
0.72	15	200	32.65
0.69	3	203	32.84
0.79	87	290	37.90
0.82	15	305	38.79
0.75	45	350	40.96
0.72	31	381	41.87
0.76	99	480	42.94

After stopping the test, water level was monitored for approximately 947 minutes. Water level recovered to over 90% the static water level approximately 358 minutes after the pump was stopped. Drawdown and recovery data recorded at the test well during the constant-rate test is included on **Figure 8** and drawdown and recovery data recorded at the observation wells during the constant-rate test is included on **Figure 9**.

Groundwater Quality Sampling

WSP collected three groundwater samples throughout the M-52A constant-rate test. Each sample was labeled and placed on ice for transport to Eurofins for analysis. The samples were analyzed for Boron and Cobalt. Additionally, water quality parameters including temperature, pH, specific conductance, dissolved oxygen, oxidation reduction potential, and turbidity were measured in the field using a calibrated water quality meter. The laboratory analytical report is included as **Attachment A**. Sample analysis and field parameters results are summarized in **Table 6**.

ANALYSIS OF AQUIFER TEST RESULTS

The conceptual site model (CSM), as described in *Annual Groundwater Monitoring and Corrective Action Report for 2023*, was used as a basis for aquifer test analysis assumptions (Wood, 2024). In addition, lithologic logs, well construction diagrams, and previous aquifer test results were reviewed to assess hydrogeologic conditions at each of the test and observations wells. In summary, the hydrogeological setting in which the test and observation wells are completed consists of the uppermost alluvial aquifer located within the Tanner Wash Alluvial basin downgradient of the BAP.

This aquifer primarily consists of unconsolidated heterogeneous layers of clay, silt, sand, and gravel and receives recharge from Tanner Wash and leakage from the BAP. The aquifer primarily consists of unconsolidated heterogeneous layers of clay, silt, sand, and gravel. Wet zones noted in the Holbrook and Moqui indicate BAP seepage/groundwater likely flows through preferential pathways and highly weathered zones below the alluvial unit. Generally, groundwater flows in a southwest direction through potentially discontinuous preferential pathways. The heterogeneity of the aquifer in the area of the BAP likely results in variable thickness and hydraulic conductivity across relatively small areas.

ZONE OF INFLUENCE EVALUATION

The radius of influence is defined as the radial distance from a pumping well where drawdown is effectively zero and the zone of influence is the area within this radial distance (Duffield, 1996). Due to the heterogeneity and anisotropic characteristics of the alluvial aquifer downgradient of the BAP, the zones of influence produced during past aquifer tests downgradient of the BAP vary widely (WSP, 2023). The zones of influence produced by the W-307R and M-52A constant rate tests were evaluated by observing water level drawdown at the observation wells during the tests. **Figures 2 and 3** show the locations of the observation wells in relation to W-307R and M-52A, respectively. **Figures 5 and 9** present time-drawdown plots of groundwater levels recorded at the observation wells during the W-307R and M-52A constant rate tests, respectively.

W-307R

Water level drawdown response was not observed at any of the observation wells during the W-307R constant rate test, so the zone of influence induced from the pumping well during the constant rate test was smaller than the distance to the closest observation well (MW-71A, located 660 feet to the northwest).

M-52A

Water level drawdown response which corresponded to the M-52A constant-rate test, was observed at MW-69A, MW-70M, and TDX-5, located approximately 22 ft southwest, 32 ft southwest, and 38 ft south of M-52A, respectively. Drawdown response was observed at each of the observation wells. Based on these observations, the extent of the radius of influence produced from the M-52A constant rate test exceeded a radial distance of 38 ft which correspond to the distances from M-52A to TDX-5.

The time-drawdown data collected at MW-69A and presented on **Figure 9** does not clearly demonstrate a time-drawdown trend that corresponds with the trends seen at TDX-5 and MW-70M, however, the drawdown observed at this well is likely a result of pumping at M-52A (screened from 20 to 70 ft bgs) during the aquifer test. MW-69A is screened in shallow (17-27 ft bgs) and clay-rich sections of the alluvium while TDX-5 and MW-70M are both screened deeper (36-76 ft bgs and 46-76 ft bgs, respectively) in weathered sections of the Moqui (**Appendix C**). A similar response was observed between MW-69A and TDX-5 during the constant rate test conducted in 2021 (WSP, 2023). The low permeability rates of the clay-rich alluvium likely create a slow and delayed drawdown response in the water table at MW-69A, which resulted in the linear trend seen for the time-drawdown data included on **Figure 9**.

SATURATED THICKNESS

The thickness of the aquifer (b) used for each aquifer test evaluation was based on the saturated thickness in the pumping well and is included in **Table 7**. The wells were considered to partially penetrate the aquifer based on the placement of the well screen within the aquifer. The hydraulic conductivity ratio of vertical conductivity (Kz) to

horizontal conductivity (K_r) was assumed to be 0.1 for each test analysis to comply with parameters set in recent analytical modelling of the Tanner Wash alluvial aquifer near the BAP (Montgomery & Associates).

W-307R

A b value of 45.14 ft was based on the vertical distance between the SWL measured at the test well prior to the start of the constant-rate test (22.69 ft bgs) and the bottom of the W-307R well screen (65 ft bgs). For the analysis, W-307R well construction was defined as partially penetrating the aquifer because the well screen interval is from 35 to 65 ft bgs (i.e., the 45.14 ft aquifer is partially screened over 30 ft), and saturated soil was logged above the well screen interval.

M-52A

A b value of 54.65 ft was based on the vertical distance between the SWL measured at the test well prior to the start of the constant-rate test (18.07 ft bgs) and 75 ft bgs, which is approximately the average depth at which dry Moqui has been encountered in nearby borings MW-70M (73 ft bgs) and TDX-5 (82 ft bgs). Lithologic data from these wells was used to determine the base of the saturated zone because lithologic data from the M-52A boring indicates the well was terminated in a zone of Moqui containing moisture (above the base of the saturated zone). M-52A well construction was defined as partially penetrating the aquifer because the well screen interval is from 20 to 70 ft bgs (i.e., the 54.65 ft aquifer is partially screened over 50 ft).

AQUIFER TEST ANALYSIS RESULTS

Drawdown and recovery data recorded from the test wells and their respective observation wells (as applicable) was analyzed to determine aquifer properties such as transmissivity, storativity, and hydraulic conductivity. Values for transmissivity and storativity were obtained from the analysis of test data using the AQTESOLV (Duffield, 1996) software package. Analytical solutions used to assess the test data include the Hantush-Jacob drawdown and recovery methods for leaky-confined aquifers (1955), the Cooper-Jacob method (1946), and the Theis drawdown and recovery methods (1935). The Hantush-Jacob method was used to assess time-drawdown and recovery data and assumes a homogeneous, anisotropic, leaky, confined aquifer with vertical flow in the aquitard(s) (Hantush and Jacob, 1955). The Cooper-Jacob solution was used to assess late time-drawdown data and assumes a homogeneous, isotropic, unconfined aquifer with unsteady flow (Cooper and Jacob, 1946). The Theis solution was used to assess late time drawdown data and assumes a homogenous, isotropic, unconfined aquifer with unsteady flow (Theis, 1935). The Theis solution was also used to assess late time recovery data which assumes a homogenous, isotropic, confined aquifer with unsteady flow (Theis, 1935).

Hydraulic conductivities were estimated using the following equation:

$$T=Kb$$

(T =transmissivity [ft^2/day], K =hydraulic conductivity [ft/day], and b =aquifer thickness [ft])

The analytical solutions are presented in **Appendix D** and summarized on **Table 7**. Time-drawdown data used for the W-307R constant-rate test analysis are presented on **Figures 4** and **5**, and time-drawdown data used for the M-52A constant-rate test analysis are presented on **Figures 8** and **9**.

W-307R

W-307R constant-rate test drawdown and recovery data was analyzed using the Hantush-Jacob, Cooper-Jacob methods. W-307R recovery data was analyzed using the Theis analysis method. Transmissivity values produced from these analyses range from 126.3 ft^2/d (944.7 gpd/ft) to 5,115.8 ft^2/d (38,266.2 gpd/ft). Hydraulic conductivity values ranging from 2.8 ft/d to 113.3 ft/d were calculated by dividing the transmissivity values from the aquifer test analysis

by the saturated thickness of 45.1 ft. The average transmissivity is 2,128.8 ft²/d (15,923.2 gpd) and the average hydraulic conductivity is 47.2 ft/d. These results are presented in **Table 7**. Due to the lack of drawdown response observed at any observation well during the W-307R constant-rate test, the Theis solution for residual drawdown data was selected as the most applicable solution for this location since this method does not require observation well data.

The rate at which water level drew-down during the constant rate test came close to stabilizing (approximately 0.4 ft/hour average) until approximately 3,444 minutes after pumping started, at which time the water level drew down approximately 1 foot over the course of 3 minutes (from 3444.73 to 3447.73 minutes after starting the test). Following this brief interval of increased drawdown, the rate of water level draw-down was comparable to the rate of water level drawdown prior to 3444.73 minutes after starting the pump (approximately 0.27 ft/hour). This period of increased drawdown either suggests the presence of a boundary condition or an undetected mechanical issue with the pump. However, field observations collected at the time of the test indicate pumping rates stayed at 28 gpm during and after the brief moment of increased drawdown and no problems with the pump configuration were documented during the test, so the period of increased drawdown can likely be attributed to a boundary condition. The cone of depression created by the constant rate test may have intercepted a small zone of less permeable sediments in the alluvial aquifer which increased the drawdown rate at the test well. This is an expected occurrence in heterogeneous aquifers such as the Tanner Wash alluvial aquifer, which is composed of laterally discontinuous layers of transmissive sediments. Water level drawdown at the pumping well is presented as **Figure 4**.

M-52A

M-52A constant-rate test drawdown and recovery data was analyzed using the Hantush-Jacob, Cooper-Jacob, and Theis analysis methods for data obtained at M-52A, MW-70M, and TDX-5. Drawdown and recovery data collected at MW-69A was not included in the test analysis because the time-drawdown data trend was not defined enough to support accurate curve matching. Transmissivity values range from 1.2 ft²/d (9.1 gpd/ft) to 277.3 ft²/d (2,074.2 gpd/ft) with an average of 154.3 ft²/d (1,154.0 gpd/ft). The hydraulic conductivity estimates, obtained by dividing the transmissivity values by the saturated thickness of 54.7 ft, range from 0.02 ft/d to 5.07 ft/d, with an average of 2.82 ft/d. Excluding the residual drawdown analysis from M-52A, the average transmissivity is 169.6 ft²/d (1,268.5 gpd/ft) and the average hydraulic conductivity is 3.1 ft/d. These results are presented in **Table 7**.

Water level drawdown rates did not stabilize during the M-52A constant-rate test (**Figure 8**). Changes in water level drawdown rates observed during the constant rate test are generally attributed to changes in the pumping rate, however, a noticeable increase in drawdown rates between approximately 30.7 to 47.7 minutes after the start of the test does not correlate with pumping rate fluctuations documented on the aquifer test field form (**Figure 8 and Appendix A**). A similar change is observed in the recovery data at approximately 737.9 minutes after the start of the test, where a noticeable decrease in the water level recovery rate is observed on **Figure 8**. This same drawdown trend is observed on the observation well plots presented on **Figure 9** at approximately 39.5 minutes after the start of the test, where, prior to this point, drawdown rates in observation wells MW-70M and TDX-5 is noticeably slow, and no drawdown is observed at MW-69A. After this point, drawdown at the MW-70M and TDX-5 increases and drawdown begins at MW-69A. Additionally, a noticeable decrease in recovery rates is apparent in the MW-70M and TDX-5 recovery data at approximately 737.9 minutes after the start of the test, which matches the trend seen on the test well recovery data (**Figure 9**). Drawdown is also observed to end and recovery begins at MW-69A at approximately this same time.

A similar change in drawdown rates was observed during the step-rate test. The accelerated drawdown rate observed at the test well during the first step between approximately 26 and 45 minutes after the start of the test corresponds to the same interval observed during the constant-rate test. Additionally, a period of decreased recovery rates is

apparent in the step-rate test recovery data for the test well and observation wells at approximately 400 minutes after starting the test.

This change in drawdown and recovery rates is interpreted as the interception of a less-permeable layer by the cone of depression induced by pumping during both the pumping and recovery monitoring phases of the aquifer tests. It's postulated that during the beginning 39.5 minutes of the constant-rate test, groundwater moved through a less permeable aquifer layer, which slowed recharge rates (and accelerated drawdown rates) at the pumping well and delayed drawdown at the observation wells. Once the cone of depression impacted a zone of higher permeability, water was able to be supplied to the test well at a faster rate (which slowed the drawdown rate at the pumping well), and the cone of depression extended out to the observation wells, which increased drawdown at those locations. This same layer was intercepted again at 737.9 minutes after the start of the test when the water table was recovering, which slowed recovery rates at the test and observation wells.

The observed drawdown and recovery trends indicate the presence of a leaky confining layer which overlies a more permeable aquifer at depth. Lithologies observed during borehole advancement further support this claim. The presence of a layer of clay-rich alluvial sediments are noted on the M-52A, TDX-5, and M-70M boring logs above the wells respective screened intervals (from 0-10 ft bgs, 15-29 ft bgs, and 13-19 ft bgs, respectively), and similar clay-rich alluvial sediments are noted on the MW-69A boring log throughout and directly below the well's screened interval (from 13-19 ft bgs and 25-29 ft bgs) (**Appendix C**). Additionally, saturated and highly weathered Moqui is noted directly below the contact between the alluvium and Moqui on the MW-70M, MW-69A, and TDX-5 boring logs (**Appendix C**). MW-69A is screened in or directly above the clay-rich leaky confining unit. The screened intervals at M-52A and TDX-5 partially intercept this clay-rich leaky confining unit, but also intercept the more permeable aquifer located at the contact between the alluvium and weathered Moqui. The MW-70M screened interval is below the leaky confining layer and only penetrates the more permeable aquifer. This relationship created the delayed drawdown and recovery trend observed at MW-69A and the accelerated and slowed drawdown and recovery rates observed at M-52A, TDX-5, and MW-70M.

These observed hydrogeologic conditions support the selection of the Hantush-Jacob solution, which assumes leaky-confined conditions for the aquifer, as the most applicable aquifer test analysis solution for this location. The average of the conductivity values obtained from this method is 2.7 ft/d.

WATER QUALITY ANALYSIS

Analytical results for the groundwater samples collected during the constant rate tests at W-307R and M-52A were evaluated to understand changes in groundwater chemistry at the test well locations throughout the constant rate tests. The analytical results for samples collected during the W-307R constant rate test are summarized in **Table 3**, and the analytical results for samples collected during the M-52A constant rate test are summarized in **Table 6**. Each table includes analytical data from groundwater samples collected at the respective test well in April 2023, October 2022, and April 2022, for comparison. The laboratory analytical report for the samples collected during the constant rate tests are included in **Appendix B**. The sampling of groundwater during the constant rate tests were not performed in accordance with the Sampling and Analysis Plan (SAP) for the Site (Wood, 2022). This data was reviewed for a qualitative comparison and should not be considered statistically relevant data as part of the detection and assessment monitoring programs for CCR corrective action, closure, and post-closure.

W-307R

No significant variation in constituent concentration is apparent between the three samples that were collected during the W-307R constant-rate test. Generally, the highest constituent concentrations were observed for the first

sample collected (CRT1-W-307R-0623) and the lowest concentrations are observed for the last sample collected (CRT3-W307R-0623); however, the differences between the highest and lowest concentrations are relatively small and the concentrations are within the ranges of concentrations from recent sample events (October 2022 and April 2023, respectively). Additionally, no significant variation in the field parameters measured at the time each sample was collected is observed between the three samples collected during the W-307R constant-rate test.

M-52A

No significant variation in constituent concentration is apparent between the three samples collected during the M-52A constant rate test. Additionally, the constituent concentrations are within the ranges of concentrations from recent sample events (October 2022 and April 2023, respectively).

Variation in the field parameters measured during sample collection was observed between samples. One parameter which showed considerable variability was ORP, which decreased from 159.5 millivolts (mV) for the first sample to -0.3 mV for the last sample collected during the constant-rate test. This transition from oxidizing to reducing groundwater conditions indicates that the groundwater pumped from M-52A early in the test was likely sourced from higher elevations in the alluvial aquifer and the groundwater pumped later in the test was likely sourced from lower elevations in the alluvial aquifer. Groundwater in the alluvial aquifer sourced from higher elevations in the area around M-52A has historically had a positive ORP value and groundwater sourced from lower elevations have historically had a negative ORP value. Samples collected at MW-69A and M-52A during the three most-recent semi-annual sampling events supports this relationship; all three samples collected at MW-69A were positive (35.4 mV, 20.5 mV, and 61 mV for sample collected in April 2022, October 2022, and April 2023, respectively) and all three samples collected at M-52A were negative (Table 6). This relationship indicates that M-52A has the potential to capture groundwater located in both higher and lower elevations of the alluvial aquifer. Additionally, this relationship indicates groundwater is limited in the higher elevation portions of the alluvial aquifer near M-52A.

Significant variation in turbidity was also observed, which rose from 9.81 to 557 NTUs between the first and second sample, and then decreased to 77 NTUs with the third sample. The variation in turbidity can likely be attributed to the changes made to the pumping rate during the test.

SUMMARY AND CONCLUSIONS

The average aquifer properties calculated from the aquifer test data are summarized below.

Table 8 - Summary of Aquifer Test Results

TEST WELL	TRANSMISSIVITY (GPD/FT)	HYDRAULIC CONDUCTIVITY (FT/D)	STORATIVITY (DIMENSIONLESS)
W-307R	38,266.2	113.3	0.08*
M-52A	1,119.8	2.7	0.05

*Value is the ratio of storativity during pumping to storativity during recovery

The W-307R aquifer test did not stress the aquifer in the vicinity of W-307R adequately to evaluate connectivity between the well location and other wells located downgradient of the BAP because there was no evidence of impacts at observation wells used during the W-307R aquifer test. Additional observation points are recommended prior to conducting future aquifer tests at W-307R for the purpose of evaluating connectivity between W-307R and the BAP or

other portions of the Tanner Wash Alluvial aquifer. These additional observation points should be located closer to W-307R than the existing points, ideally within 100 to 200 feet of the well.

The lack in variability of the groundwater quality obtained during the W-307R aquifer test indicates the groundwater pumped from W-307R during the aquifer test was from a single source which was not depleted during the 72-hour pumping cycle. The size and extent of this body of groundwater is currently unknown. WSP recommends conducting further investigations in the central portion of the Tanner Wash Alluvial basin located between W-307R and the BAP to better define the lithology of the aquifer and extent of the body of groundwater located near W-307R. Investigative techniques in this area could include geophysical surveys (resistivity and seismic surveys), drilling exploratory borings, or installing additional extraction wells. However, future investigations in this area may be limited to established access easements due to land ownership around W-307R (**Figure 1**).

The pumping rates attempted during the M-52A constant-rate test all exceeded the maximum sustainable pumping rate for the well, as the water level drawdown never stabilized during the test. At this time, WSP does not recommend converting M-52A to an extraction well. Instead, TDX-5, located approximately 40 feet to the south of M-52A, is more suitable as an extraction well in this area. TDX-5 is a newer 6-inch well (installed in 2021) and sustained higher pumping rates (1.5 gpm) for a longer period of time (approximately 10 hours) than M-52A during aquifer testing conducted at that well in 2021 (WSP, 2023).

The drawdown trend observed at MW-69A, and the periods of increased drawdown rates and decreased recovery rates observed during the M-52A constant-rate and recovery tests indicates a layer of less-permeable alluvial sediments is present throughout the screened interval of MW-69A and either above or near the top of the screened intervals of M-52A, MW-70M, and TDX-5. Additionally, this indicates groundwater flow in this area is likely preferential along the contact between the alluvium and Moqui.

REPORTS

ANALYTICAL REPORT

PREPARED FOR

Attn: Natalie Chrisman
Arizona Public Service Company
4801 Cholla Lake Rd
Joseph City, Arizona 86032

Generated 7/11/2023 12:33:23 PM

JOB DESCRIPTION

Aquifer Testing
SDG NUMBER APS Cholla Power Plant

JOB NUMBER

550-203635-1

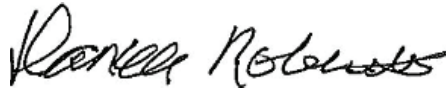

Eurofins Phoenix

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Job ID: 550-203635-1
SDG: APS Cholla Power Plant

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
550-203635-1

Comments

No additional comments.

Receipt

The samples were received on 6/16/2023 4:36 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.8° C.

HPLC/IC

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Method 200.7 Rev 4.4: The continuing calibration blank (CCB) for analytical batch 550-303709 contained Sodium above the reporting limit (RL). All reported samples associated with this CCB were either ND for this analyte or contained this analyte at a concentration greater than 10X the value found in the CCB; therefore, re-analysis of samples was not performed.

CRT3-W307R-0623 (550-203635-1), CRT2-W307R-0623 (550-203635-2) and CRT1-W307R-0623 (550-203635-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

L3	The associated blank spike recovery was above method acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Arizona Public Service Company
Project/Site: Aquifer Testing

Job ID: 550-203821-1

Comments

No additional comments.

Receipt

The samples were received on 6/22/2023 3:23 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.0° C.

Metals

Method 200.7 Rev 4.4: The laboratory control sample (LCS) associated with preparation batch 550-303134 and analytical batch 550-303578 was outside acceptance criteria for Boron, Molybdenum and Zinc. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.2,1.5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Gravel fraction: gravel to 2.3 in. consisting of fine grained brown sandstone, green sandy siltstone, and trace chert. Non-lithified. Low plasticity. Well graded. Reaction to acid: moderate.
65.0 - 70.0	Qal	WELL GRADED GRAVEL WITH SILT AND SAND (GW-GM): Moderate brown [5YR4/4]; gravel 60%, angular to rounded fine sand 30%, silt and clay 10%. Gravel fraction: gravel to 2.6 in. consisting of chert, fine grained brown sandstone, and green sandy siltstone. Non-lithified. Low plasticity. Well graded. Reaction to acid: moderate.
70.0 - 75.0	Qal	WELL GRADED GRAVEL WITH SILT AND SAND (GW-GM): Moderate brown [5YR4/4]; gravel 70%, angular to rounded fine sand 20%, silt and clay 10%. Gravel fraction: gravel to 0.6 in. consisting of fine grained brown sandstone, red and green sandy siltstone, and trace chert. Non-lithified. Low plasticity. Well graded. Reaction to acid: moderate.
75.0 - 79.0	Qal	WELL GRADED GRAVEL WITH SILT AND SAND (GW-GM): Moderate brown [5YR4/4]; gravel 70%, angular to rounded fine sand 20%, silt and clay 10%. Gravel fraction: gravel to 1.4 in. consisting of fine grained brown sandstone, red and green sandy siltstone, and trace chert. Non-lithified to moderately lithified. Low to medium plasticity. Well graded. Reaction to acid: weak to moderate.
TRIASSIC MOENKOPI FORMATION (TRm)		
79.0 - 83.0	TRm	SANDSTONE AND SILTSTONE: Moderate brown [5YR4/4]; Weakly to moderately lithified. Reaction to acid: weak to moderate.

Gravel/sand division based on USCS scale. Grain size fractions estimated using manual field methods.

EXPLANATION

 Depth to Water Level

Note: All PVC blank and slotted casing is Schedule 80; slot size is 0.020 inches.

APPENDIX

SEMIANNUAL REPORT DOCUMENTING PROGRESS IN REMEDY SELECTION FOR THE FLY ASH POND AND BOTTOM ASH POND

2023-07-15

Arizona Public Service Company
400 N. 5th Street
Phoenix, Arizona 85004

**Subject: Semiannual Report Documenting Progress In Remedy Selection
Fly Ash Pond And Bottom Ash Pond
Cholla Power Plant – Navajo County, Arizona**

In accordance with 40 Code of Federal Regulations (CFR) Section (§) 257.97(a) of the Coal Combustion Residuals (CCR) Rule, this Semiannual Remedy Selection Progress Report (Semiannual Report) has been prepared on behalf of Arizona Public Service Company (APS) to document progress in selection of remedies for CCR units which have been identified as potentially impacting groundwater at the APS Cholla Power Plant, located in Navajo County, Arizona (the Site). The identified applicable site CCR units include the Fly Ash Pond (FAP) and the Bottom Ash Pond (BAP). Semiannual progress reporting to support remedy selection began on July 15, 2019. The most recent update was provided in the *Annual Groundwater Monitoring and Corrective Action Report (GMCAR) for 2022*, dated January 31, 2023. This Semiannual Report serves as the ninth update on remedy selection progress at the Site and documents activities completed to date in 2023.

SUMMARY OF ACTIVITIES COMPLETED IN 2023

Activities completed by APS in the first half of 2023 in support of remedy selection for the FAP and the BAP include the following:

- *Groundwater Monitoring at the FAP and BAP.* Groundwater monitoring, per requirements CFR § 257.95, has continued at both the FAP and BAP at a minimum on a semiannual basis.
- *Integration of Extraction Wells into Seepage Collection System Operations at the FAP.* Construction of improvements to the Geronimo and Hunt Seepage Collection Systems was completed and start up and operation began in January 2023. Completed activities associated with incorporating the extraction wells into the system and ongoing performance monitoring will be documented in the 2023 GMCAR.
- *Integration of Extraction Wells and Improvements to Intercept Trenches into Seepage Collection System Operations at the BAP.* Design of improvements to make the Seepage Collection Systems operate more effectively was initiated in early 2023.
- *Operation of Existing FAP and BAP Seepage Collection Systems.* As part of interim response measures at both the FAP and BAP, existing seepage collection systems have continued to operate during the first half of 2023. Annual contaminant mass removal estimates from both seepage collection systems as they stand to date were calculated for 2022 and will continue to be calculated and included in the 2023 GMCAR.

F: +1 602-733-6100
wsp.com

- *Numerical Groundwater Model Update.* The numerical groundwater model for the FAP and BAP was updated to assess potential water quality impacts and support selection of a groundwater remedy for the CCR units. Hydrogeologic and water quality data obtained to date were used to update and calibrate the model. The modeling procedures and results will be documented in a summary report in accordance with industry standards and guidelines and included as an appendix to the Remedy Selection Report.
- *Evaluation of FAP Dewatering Strategies.* A pilot-test field program to evaluate the extent and removal of drainable pore water upgradient of the FAP dam was conducted in May and June 2023. Multiple wells were installed through the ash to the alluvium underlying the FAP and testing was performed. Data are currently being evaluated. A summary of results will be presented in the 2023 GMCAR.
- *Remedy Selection Reports for the FAP and the BAP.* Preparation of a remedy selection report continued through the beginning of 2023 to document how the selected remedy will meet the requirements of 40 CFR §257.97(b).

FUTURE PLANNED ACTIVITIES

APS plans to perform the following activities in support of remedy selection during the second half of 2023 (and in upcoming years, as noted):

- *Integration of Extraction Wells and improvements to Intercept Trenches into Seepage Collection System Operations at the BAP.* The installation of extraction wells and improvements to seepage intercept trenches at the BAP will likely begin in late 2023. Completed activities associated with incorporating the extraction wells and intercept trenches into the system will be documented in the 2023 GMCAR.
- *Continued Operations of Existing FAP and BAP Seepage Collection Systems.* The seepage systems at both the FAP and BAP will continue to serve as part of interim response measures at both CCR units until remedial activities begin. The updated seepage collection systems at both units will also likely be a part of final selected remedies.
- *BAP In-Situ Remedy Pilot Study.* Based on recommendations put forth in the bench-scale evaluation, a pilot-scale study of in-situ strategies for cobalt remediation may be conducted at the BAP. The pilot-scale study would implement testing of groundwater oxidation amendments at near select wells. Implementation and assessment of the pilot-scale study would likely be part of initial remedial activities for adaptive remedy options.
- *Remedy Selection Reports for the FAP and BAP.* Preparation of a remedy selection report documenting how the selected remedy will meet the requirements of 40 CFR §257.97(b) will continue during the second half of 2023.
- *Initiation of Remedial Activities.* Upon completion of the FAP and BAP Remedy Selection Reports, within 90 days APS will initiate and begin documentation of remedial activities for each CCR unit pursuant to 40 CFR §257.98(a).

Respectfully submitted,

WSP USA Environment & Infrastructure Inc.

**Subject: §257.103(f)(2) ANNUAL PROGRESS REPORT DOCUMENTING
THE CONTINUED LACK OF ALTERNATIVE CAPACITY AND
PROGRESS TOWARDS CLOSURE OF THE FAP AND BAP
Cholla Power Plant – Navajo County, Arizona**

In accordance with the requirement for an annual progress report required by 40 CFR §257.103(f)(2)(x), this report documents the continued lack of alternative disposal capacity for coal combustion residuals (CCR) at the Arizona Public Service Company (APS) Cholla Power Plant during the reporting period (i.e., December 1, 2022 through November 30, 2023). This report also describes progress made during the reporting period towards closure of two CCR units that APS has requested a site-specific alternative deadline to initiate closure for: the Fly Ash Pond (FAP) and the Bottom Ash Pond (BAP). Our demonstration prepared pursuant to §257.103(f)(2) was submitted to the United States Environmental Protection Agency (US EPA) on November 30, 2020 and was determined by the US EPA to be complete on January 11, 2022. As a consequence of submitting a complete demonstration, the deadline to cease receipt of waste at the FAP and BAP has been tolled until the US EPA issues a final determination regarding the demonstration.

Background. The 420-acre FAP and 80-acre BAP are unlined surface impoundments that receive CCR from coal-fired boiler operations at the Cholla Power Plant. In accordance with the requirements of federal CCR regulations, both the FAP and BAP must cease receiving CCR in the near term and “close for cause.” Since APS plans to cease coal-fired boiler operations at Cholla Power Plant no later than April 2025 and complete closure of the FAP and BAP by October 17, 2028, APS seeks to continue receiving CCR and non-CCR wastestreams in the FAP and BAP under the alternative closure provision of §257.103(f)(2) through June 2025 to accommodate decommissioning.

Lack of Alternative Disposal Capacity. There have been no changes in alternative disposal capacity since submittal of our §257.103(f)(2) demonstration. If the FAP and BAP were not available to receive CCR, coal-fired electrical generation operations at Cholla Power Plant would need to shut down because:

- The FAP and BAP are the only existing CCR units located on-site that are sized and designed appropriately to receive CCR and non-CCR wastestreams generated by operation of Cholla Power Plant.
- Management of CCR and non-CCR wastestreams in wet temporary storage on-site is not technically feasible, let alone safe or adequately protective of the environment, given the projected volumes and the corresponding number of temporary tanks that would be required to contain the wastestreams.
- It is not technically feasible to send wet CCR off-site for disposal – there is no appropriate off-site treatment or disposal facility nearby that the CCR could be piped to and trucking/conveying by rail significant quantities of liquids to an appropriate waste processing facility or landfill is unlikely to be successful. Off-site transport of this

liquid CCR risks creating significant threats to public safety; these risks far out-weigh the benefit of off-site disposal of CCR.

Progress Towards Closure. During the reporting period, APS elected to modify the closure strategy for the BAP from closure in place to closure by removal with placement of the excavated CCR from the BAP in the Bottom Ash Monofill (BAM), an existing CCR landfill at the facility. APS is currently in the process of advancing a conceptual design for closure of the BAP by removal and will modify the closure plan to reflect this change as soon as feasible.

Attachment D(2) of our §257.103(f)(2) demonstration identified multiple tasks required to advance closure of the FAP and BAP by October 17, 2028. An updated version of Attachment D(2) is enclosed with this report. Progress on these tasks is as follows:

- Minimize discharge to the FAP – Since the date of the previous annual progress report (November 29, 2022), discharges from an overflow/blowdown flash tank to the scrubber solids sump that discharges to the FAP were rerouted as part of our commitment to minimizing discharges into the FAP.
- FAP Water Level Monitoring – Decant (free) water level monitoring in the FAP continued during the reporting period and is being conducted to track progress of dewatering the unit. Based on the results of monthly monitoring, the level of the FAP has declined by 2.9 feet thus far in 2023 which is higher than declines typically observed by this time each year. Declines between the December of the previous year and November of 2020 and 2021 were 1.5 and 2.0 feet, respectively; above average rainfall during the summer and fall of 2022 is believed to have resulted in an a relatively low level of decline in 2022 (0.27 feet).
- Stockpile bridge lift material at the FAP – APS is currently in the process of relocating bottom ash from the BAM to be used as future bridge lift material; this activity began in July 2023 and is anticipated to continue through most of 2024. The estimated volume of bottom ash relocated from the BAM to the FAP to date is approximately 160,000 cubic yards.
- Land Acquisition for Closure – Decommissioning and closure planning supporting the shutdown of Cholla Power Plant has necessitated a review of property ownership in the vicinity of the facility. A comprehensive ALTA survey of Cholla property began in September 2022 and was completed in June 2023. The survey has been useful in discussions with adjacent private property owners regarding the potential acquisition of/access to land for sources of borrow materials used in closure. An access agreement for testing of potential soils near the FAP was executed in October 2023. Preliminary conceptual designs for the FAP identified the potential need for land to install stormwater diversion channels around the FAP. At this time, retention of stormwater upstream of the FAP is planned and the acquisition of land for stormwater diversion channels around the FAP is not expected to be necessary.
- Run-On Diversions and Cofferdams (Push Up) Dams – Temporary dams used to divert stormwater upstream of the FAP from contributing run-on to the FAP were completed in December 2022.
- FAP Dewatering – APS conducted detailed design, procurement, and installation of twelve RWI Pittboss mechanically enhanced evaporators to promote evaporation of free water in the FAP in 2022. Since the units began operating in August of 2022, issues with the units becoming detached from their mooring and capsizing led to intermittent operation. The evaporators were taken offline in early March 2023 and redeployed using a new anchoring system in June 2023. Given the limited progress

of decant water evaporation, additional measures to address the water were progressed during the reporting period.

- FAP Geotechnical Investigations and Design Engineering – During the reporting period, geotechnical investigations assessing the surface of the FAP for stability were conducted. Investigations included the construction and testing of a number of roads using various materials and evaluation of nearby soils for use as capping material. With respect to design engineering, an analysis of three different options for addressing stormwater run-on and capping approaches was conducted which identified full containment of stormwater run-on upstream of the FAP as the most viable approach to stormwater management after closure. An evapotranspiration capping strategy was retained as the preferred method for capping the FAP.
- Dewatering of Drainable Porewater at the FAP Using Extraction Wells - Preliminary assessment of engineering control measures to remove drainable porewater within the waste sluiced to the FAP began in 2022; this work has continued through 2023 and included the installation and operation of multiple dewatering test wells in the FAP. The results of testing will assist in refining the FAP closure plan. Once the design of engineering control measures has been suitably progressed, the FAP closure plan will be updated to demonstrate closure performance requirements.
- BAP Design Engineering – Given the change in closure approach for this unit, APS progressed the conceptual design of closing the BAP by removal which is anticipated to include removal of bottom ash from the BAP with placement in the BAM. A lateral expansion of the BAM will likely be required into the northern footprint of the BAP once bottom ash has been removed from this region.

If you have any questions regarding this progress report, please contact Natalie Chrisman Lazarr at 602.316.1324 or via email at natalie.chrisman@aps.com.

Sincerely,

Michael Hancock

Michael Hancock
Plant Manager - Cholla Power Plant

Enclosure: Attachment D(2) – Updated for 2023

ATTACHMENT D(2) – 2023 Updates in GREEN Text

**CHOLLA POWER PLANT
CLOSURE SCHEDULE NARRATIVE
40 CFR 257.103(f)(2)(v)(D)**

Arizona Public Service Company (APS) has been planning for the closure of the Fly Ash Pond (FAP) and Bottom Ash Pond (BAP) for some time. Figures D-1 (FAP Closure Activities) and D-2 (BAP Closure Activities) present Gantt charts depicting the tasks that must be completed as part of pond closure with the corresponding planned schedule for those tasks. This narrative supplements the Closure Plans presented as Attachment D(1) and presents supporting detail regarding the tasks and schedule identified in each Gantt chart.

1. Closure of the Fly Ash Pond

1.1 Pre-Construction

1.1.1 Minimize Discharge to the FAP

Continue implementing measures that limit discharges to the FAP; this activity has been ongoing since early 2016 and has included sale of fly ash to a local cement manufacturer, shut down of Unit 2 and Unit 4, diversion of water from seepage collection systems to general water (this flow previously discharged into the FAP), diversion of reject from the reverse osmosis water treatment system, and various plant operational modifications. This activity will continue thru plant shut down.

1.1.2 Stockpile Closed Ash Pond 1 CCR Material ~~for Bridge Lift~~

Move 767,000 cubic yards (cy) of ash from closed Ash Pond 1 to a stockpile area located within the Fly Ash Pond footprint and store for utilization as ~~bridge lift material~~ **fill and stabilization material** for closure activities. Work began in September 2020 and was completed in December 2021.

1.1.3 Stockpile Bottom Ash for Bridge Lift

Relocate approximately ~~6~~**4**00,000 cy of bottom ash from the Bottom Ash Monofill (BAM) to a stockpile area located within the FAP footprint and store for utilization as bridge lift material for closure activities. Initiated development of a haul route and procurement package in 2022. This work ~~will can~~ started in **second quarter of 2023 and is anticipated to be complete by fourth quarter of 2024.**

1.1.4 Land Acquisition/**Access for Closure** (~~e.g. Diversion Channels~~)

No later than 3 years prior to starting closure activities, acquire land **(or access to land)** adjacent to the FAP for soil borrow areas ~~and construction of diversion channels~~. Investigation of borrow soil areas on APS property was conducted in 2022 to justify the need for offsite borrow areas. An ALTA survey supporting land acquisition was initiated in September 2022 and ~~is projected to be completed in~~ **second quarter of 2023. An agreement for access to land for soil borrow testing was completed in October 2023.**

1.1.5 Run-On Diversions and Coffers (Push Up) Dams

Upstream in the drainage channels, build small retention coffer dams to capture precipitation run on. This work ~~will~~ was completed in late 2022.

~~1.1.6 Excavate Abutment Diversion Channels and Stockpile Select Soil~~

~~Start the excavation of abutment diversion channels approximately one year prior to the cessation of discharge of CCR material (as early as Second Quarter 2024).~~

~~1.1.76 Fly Ash Pond Dewatering~~ **Enhanced Evaporation of Decant Water Area**

Design and construction of a mechanically enhanced evaporation system for increasing the rate of evaporation and accelerating drawdown of free water within the FAP occurred in 2022. Twelve units began operation in August 2022.

1.2 Engineering

1.2.1 Design Engineering

Start design engineering activities in 2023; these activities ~~will~~ include approximately 21 months of design engineering work. The objective of these activities is to produce design drawings and specifications that will be used to procure a contractor for FAP closure activities.

1.2.2 Geotechnical and Borrow Investigations/Bridge Lift Testing

~~Start the geotechnical soils evaluation after acquisition of lands adjacent to abutments. Identify usable soils for borrow materials. If possible, build roads onto the FAP beach for access of light-weight geotechnical test equipment.~~

~~1.2.3 Bridge Lift Test Fill~~

~~Start construction test fills over the CCR material exposed in the pond next to the dam embankment. Test fills to measure internal water pressures generated by bridge lift loading. Estimate techniques and materials needed to construct full-scale soil fill cap.~~

1.3 Permits

1.3.1 Arizona Department of Water Resources (ADWR) Dam Modifications

Anticipate that the permitting process with the ADWR Dam Safety Bureau to modify a jurisdictional high hazard dam will require nine months. Consult early with ADWR to identify if additional time is needed. Initiated discussions with ADWR regarding FAP closure in late 2022.

~~1.3.2 Arizona Department of Environmental Quality (ADEQ) or US Environmental Protection Agency (EPA) CCR Rule Closure Plan Approval~~

Anticipate up to six months will be required to achieve approval of proposed Closure Plan from ADEQ or US EPA **if a permit program is in place before construction begins** ~~ADEQ does not have primacy.~~

1.4 Procurement

1.4.1 Preliminary Construction Contracts

Anticipation of six months duration for procurement of the primary construction contract (includes bid event and award of contract).

1.5 Final Boiler Closures

1.5.1 Plant Final Boiler Closures

Cease generation using coal no later than April 2025.

1.6 Construction

1.6.1 ~~Gravity Drain Down CCR Pile~~ Dewatering of Drainable Pore Water

Install and test extraction wells completed in CCR. Initiate extraction well operations and optimize the extraction of drainable pore water for the interception and removal of pore water that contributes to seepage from the FAP. Allow up to 18 months to gravity drain the delta of CCR material adjacent to the dam. This activity may include pushing out of bridge lift material to help squeeze pore water from the CCR material. This task can begin following cessation of discharge of CCR material to the FAP.

~~1.6.2 Complete Diversion Channel Rock Excavations~~

~~Complete diversion channels; rock excavations started in pre construction. Continue to segregate the selected materials for construction borrow material (activities started Second Quarter 2025).~~

1.6.23 Fill and Stabilize Remaining Water Ponds Areas with Rockfill from Diversion Channel Cuts

Backfill remaining free water at the upstream toe of CCR with rock fill material to entrap remaining free water stabilize soils in preparation for capping this activity should coincide with the excavation of the diversion channels. Utilize rock from diversion excavation.

~~1.6.4 Build Rockfill Toe Buttress to Stabilize Upstream Toe of CCR Pile~~

~~Build the toe buttress with larger rock to stabilize the CCR material. This activity will coincide with the rockfill to trap the remaining free water. Can start Fourth Quarter of 2025.~~

1.6.35 Excavate Upstream Stormwater Basins Diversion Channels and Cofferdams

Finish eExcavating upstream basins to intercept and retain stormwater run-on. diversions to connect with the diversion channels around the abutments. Work starts Third Quarter of 2025 and requires 21 months.

1.6.46 Build Stormwater Detention Basins and Outlet Works

Construct Install a composite liner system in each upstream stormwater detention basins. These basin which will outfall into culverts that convey water under Interstate 40.

1.6.57 Build the ~~South and North Half Bridge Lifts and Construct Evapotranspiration (ET) Cap~~

Construct the bridge lifts and place the ET cap material over the supporting bridge lift material as area comes available. These construction activities will be split along the north and south halves of the pond, advancing the cap materials from southwest to northeast to squeeze pore water out of the CCR pile. ET cap placement will follow the bridge lift construction activities as areas become available. Work starts ~~Second~~ **First** Quarter 2027**6**.

1.6.68 Vegetate ET Cap

Seed the ET cap as sections are completed. Finish September or October 2028.

2. Closure of the Bottom Ash Pond

2.1 Pre-Construction

2.1.1 Land Acquisition for Closure (e.g. ~~Borrow Areas~~ **Diversions Channels)**

~~If needed~~ No later than 3 years prior to starting closure activities, acquire land adjacent to the BAP for soil borrow areas and construction of diversion channels. An ALTA survey supporting land acquisition was initiated in September 2022 and ~~is projected to be~~ **was** completed in **second quarter of 20223**.

2.1.2 Mine Out West Cell from BAP

Excavate bottom ash from the west cell of the BAP and relocate material to the BAM or the FAP for use as bridge lift material.

2.1.3 Divert Bottom Ash Discharge to West Cell

Modify BAP operations to discharge into the BAP west cell in preparation for dewatering of the northern area of the BAP.

2.1.4 Collect Samples from BAM Expansion Area and BAP Dam Shell

Collect samples to evaluate the condition of the BAM expansion area and determine whether the BAP dam shell material is suitable for use as an ET cap.

2.1.5 Dewater Northern Area of the BAP

Promote gravity drain down of the northern area of the BAP.

~~**2.1.2 Stop Mining of Bottom Ash from BAP (to Bottom Ash Monofill)**~~

~~Suspend removal of bottom ash from the BAP with placement of the ash in the BAM so that the material can be used in closure activities.~~

~~**2.1.3 Allow Sluice of Bottom Ash into Decant Area to fill with BA**~~

~~Allow ash from the plant to fill in the decant west and east cells in the BAP.~~

2.2 Engineering

2.2.1 Design Engineering

~~Design engineering activities starting in 2023 approximately 21 months of design engineering work.~~ Start design engineering activities in 2023; these activities will include approximately 18 months of design engineering work. The objective of these activities is to produce design drawings and specifications that will be used to procure a contractor for BAP closure activities.

2.2.2 Geotechnical and Borrow Investigations

~~Start the geotechnical soils evaluation after acquisition of lands adjacent to abutments. Identify usable soils for borrow materials. Build roads onto bottom ash beach areas to~~ for access of light-weight geotechnical test equipment.

2.3 Permits

2.3.1 ADWR Dam Modifications

Anticipate that the permitting process with the ADWR Dam Safety Bureau to breach modify a jurisdictional high hazard dam will require fifteen nine months. Consult early with ADWR to identify if additional time is needed.

2.3.2 ADEQ or US EPA CCR Rule Closure Plan Approval

Anticipate up to six months will be required to achieve approval of proposed Closure Plan from ADEQ or US EPA if a permit program is in place before construction begins ADEQ does not have primacy.

2.4 Procurement

2.4.1 Preliminary Construction Contracts

Anticipation of six months duration for procurement of the primary construction contract (includes bid event and award of contract).

2.5 Final Boiler Closures

2.5.1 Plant Final Boiler Closures

Cease generation using coal no later than April 2025.

2.6 Construction Activities

2.6.1 ~~Transfer~~ Remove Remaining Decant Water from BAP to General Sump for Use during Decommissioning

Siphon or pump extensively sending all free water possible to the plant for use in decommissioning activities or disposal.

2.6.2 Gravity Drain-Down CCR Pile

Allow up to 18 months to gravity drain the delta of CCR material. Activities may include the use of drainage ditches, vacuum wells, and/or pushing out of bridge lift material to help squeeze pore water from the CCR material. Starts with the cessation of discharge of CCR material.

2.6.3 Excavate CCR from the BAM Expansion Area

Remove dewatered bottom ash from the northern area of the BAM and place in the BAM. This activity is anticipated to begin before boiler shutdown but could be ongoing when boiler shutdown occurs.

2.6.4 Construct a BAM Expansion Landfill and Associated Stormwater Controls

Construct a lateral to the existing BAM landfill in the northern area of the BAP footprint after the CCR has been removed from this expansion area. The new lateral will be lined. After CCR has been sufficiently removed from area around the new lateral, construct stormwater control channels.

2.6.5 Build and Vegetate an ET Cap on BAM Expansion Landfill

After CCR excavated from the BAP has been placed in the new lateral, construct an ET cap on the new expansion area, likely using soil from breaching the dam. The ET cap will be seeded for soil stabilization as the cap is placed.

2.6.6 Excavate CCR from BAP and Place in BAM

As the BAP is dewatered, excavate CCR and place the material in the BAM and the new BAM expansion landfill. This effort is anticipated to take 27 months to complete.

2.6.7 Grade and Stabilize Soils in Footprint of Former BAP

After the CCR has been removed from the footprint of the former BAP, regrade the area, as necessary, to promote proper drainage. Seed the soils thereafter to promote soil stabilization. Finish no later than October 2028.

2.6.8 Breach the BAP Dam

When safe to do so, breach the BAP dam to remove this structure from the ADWR jurisdiction.

~~**2.6.3 Grade Pond Using Drained Bottom Ash**~~

~~Grade cut and fill utilizing drained bottom ash material to achieve the final surface configuration. This activity should start as soon as possible with the gravity drain down of the bottom ash material.~~

~~**2.6.4 Excavate Upstream Diversion Channels and Retention Pond**~~

~~Excavate upstream diversion channels to connect with the diversion channels around the abutments. Work will start First Quarter of 2026 and continue for 15 months.~~

~~**2.6.5 Build ET Cap Using Stockpiled Soil from Diversion Channel Cuts**~~

~~ET cap placement will follow the grade cut and fill construction activities as areas become available. Activities will start in Third Quarter of 2027.~~

~~**2.6.6 Vegetate ET Cap**~~

~~Seed the ET cap as sections are completed. Finish September or October 2028.~~

Figure D-1

Planned Schedule for FAP Closure Activities

Last Updated: 11.27.2023 (2023 Updates in Green Text)

NOTES:

- 1. Does not describe any removal of free water to Evaporation Pond or unlined basins
- 2. ~~Does not describe any measures for enhancing drain-down or pore pressure relief within CCR pile.~~
- 3. For cap construction, a south/north distinction has been made to allow an extra year for ~~dewatering drain-down~~ of the more fine-grained northern half.

TASK	START	END	Duration	2020				2021				2022				2023				2024				2025				2026				2027				2028			
				1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4
Pre-Construction																																							
Minimize discharge to FAP	20Q1	25Q2	63 months	[Blue bar spanning 20Q1 to 25Q2]																																			
Stockpile 767,000 cy existing fly ash for fill and stabilization material	20Q3	22Q1	18 months	[Blue bar spanning 20Q3 to 22Q1]																																			
Stockpile 400,000 cy of BAM BA for bridge lift material	23Q3	24Q4	15 months	[Green bar spanning 23Q3 to 24Q4]																																			
Land acquisition/access for closure (e.g. borrow diversion channels)	23Q1	24Q2	15 months	[Blue bar spanning 23Q1 to 24Q2]																																			
Run-on control diversions and coffer (push-up) dams	22Q4	23Q1	3 months	[Blue bar spanning 22Q4 to 23Q1]																																			
Excavate abutment diversion channel, stockpile select soils																																							
Enhanced evaporation of decant water (i.e., free water) area FAP dewatering	22Q2	25Q2	36 months	[Blue bar spanning 22Q2 to 25Q2]																																			
Engineering																																							
Design engineering (SG2)	23Q1	24Q4	21 months	[Red bar spanning 23Q1 to 24Q4]																																			
Geotechnical and borrow investigations/bridge lift testing	23Q1	24Q1	12 months	[Red bar spanning 23Q1 to 24Q1]																																			
Bridge lift test fill																																							
Permits																																							
ADWR dam modifications	23Q4	24Q3	9 months	[Green bar spanning 23Q4 to 24Q3]																																			
ADEQ/USEPA CCR closure plan approval (as applicable)	24Q2	24Q4	6 months	[Green bar spanning 24Q2 to 24Q4]																																			
Procurement																																							
Primary construction contract(s)	24Q3	25Q1	6 months	[Purple bar spanning 24Q3 to 25Q1]																																			
Final Boiler Closures																																							
Plant final boiler closures	25Q2	25Q2	0 months	[Orange bar at 25Q2] Coal Fired Boiler Shutdown																																			
Construction																																							
Dewatering of drainable pore water using extraction wells	23Q4	28Q4	60 months	[Yellow bar spanning 23Q4 to 28Q4]																																			
Gravity drain-down CCR pile																																							
Complete diversion channel rock excavations																																							
Fill and stabilize remaining water pond areas with rockfill from diversion channel cuts	25Q2	25Q4	6 months	[Yellow bar spanning 25Q2 to 25Q4]																																			
Build rockfill toe buttress to stabilize upstream toe of CCR pile																																							
Excavate upstream stormwater basins diversion channels and coffer dams	25Q3	27Q2	21 months	[Yellow bar spanning 25Q3 to 27Q2]																																			
Build stormwater detention basins and outlet works	27Q2	28Q2	12 months	[Yellow bar spanning 27Q2 to 28Q2]																																			
Build south half of bridge lift using stockpiled fly ash																																							
Build south half of ET cap using stockpiled soil from diversion cuts	27Q2	27Q4	6 months	[Yellow bar spanning 27Q2 to 27Q4]																																			
Build north half of bridge lift using stockpiled fly ash	27Q1	27Q4	9 months	[Yellow bar spanning 27Q1 to 27Q4]																																			
Build north half of ET cap using stockpiled soil from diversion channel cuts	27Q4	28Q3	9 months	[Yellow bar spanning 27Q4 to 28Q3]																																			
Vegetate ET cap	28Q3	28Q4	3 months	[Yellow bar spanning 28Q3 to 28Q4]
