**CCR Program Documentation
Closure – Notification of Closure Completion
CH_ClosProgComplete_004_20221021**

Subject: Closure – Notification of Closure Completion; Sedimentation Pond - Cholla Power Plant

Pursuant to 40 C.F.R. §§ 257.102(h), APS is providing notice of its completion of closure of the Sedimentation Pond located at the Cholla Power Plant, Joseph City, Arizona. This notification includes the appended qualified professional engineer certification statements in the form of two supporting documents:

- CCR Groundwater Assessment Monitoring; Statistical Evaluation of Appendix IV Constituent Data, October 10, 2022
- SEDI Pond Closure by Removal and Construction Certification, October 13, 2021

In accordance with 40 CFR 257.101(a)(1), the unit was closed in accordance with its Closure Plan and the provisions of 40 CFR 257.102(c).

For questions regarding this Notification, please consult the CCR information webpage located within APS.com or contact neal.brown@aps.com.

Re: **CCR Groundwater Assessment Monitoring**
Statistical Evaluation of Appendix IV Constituent Data
Collected From the Sedimentation Pond Through April 2022
Arizona Public Service Company Cholla Power Plant – Navajo County, Arizona

Please be advised that, effective September 21, 2022, Wood Environment & Infrastructure Solutions, Inc. was acquired by WSP. due to the acquisition, we have changed our name to WSP USA Environment & Infrastructure Inc. no other aspects of our legal entity or capabilities have changed for this report, including our Federal Tax ID which remains 91-1641772. correspondence for this report should continue to be addressed to the undersigned.

INTRODUCTION

This Technical Memorandum (Tech Memo) presents the results of a statistical evaluation of groundwater monitoring data collected from monitoring wells downgradient of the Sedimentation Pond (SEDI) located at the Arizona Public Service Company (APS) Cholla Power Plant (Site) in Navajo County, Arizona. The statistical evaluation was performed by Geoscience Consulting Strategies LLC (Geoscience Consulting), a subcontractor to Wood Environment and Infrastructure Solutions, Inc. (Wood) pursuant to Coal Combustion Residuals (CCR) Rule requirements for groundwater monitoring and corrective action detailed in 40 Code of Federal Regulations Sections 257.90 through 257.98 (CCR Rule) (Federal Register, 2020).

The SEDI is a Site CCR unit that is currently in the assessment monitoring program. The SEDI stopped receiving wastes in October 2020 and, by October 2021, the unit was demolished and excavated. CCR removal activities associated with closing the SEDI were certified as complete by a professional engineer on October 13, 2021. The CCR Rule currently requires ongoing evaluation on a semiannual basis of Appendix IV constituent data collected from SEDI downgradient wells to determine if an Appendix IV constituent exceeds its respective groundwater protection standard (GWPS) at a statistically significant level (SSL) following removal of CCR from the unit. The SEDI will be considered closed when groundwater monitoring indicates that all Appendix IV constituents are less than GWPSs for a minimum of two consecutive sampling events. The statistical evaluation documented herein incorporates Appendix IV constituent data collected from SEDI downgradient wells M-56A, M-57A, and M-58A through April 25, 2022 to determine if a GWPS has been

wsp.com

exceeded. The April 2022 sampling event constitutes the ninth sampling round under the SEDI Groundwater Assessment Monitoring Program, and the second sampling event conducted after removal of CCR from the unit.

STATISTICAL EVALUATION RESULTS

Attachment A presents the statistical evaluation conducted by Geoscience Consulting. The results of the evaluation are summarized as follows:

- ▶ There are no GWPS exceedances for Appendix IV constituents at the SEDI downgradient wells for the last two sampling events.
- ▶ Chromium and cobalt were detected above the background threshold value (BTV) at M-57A at concentrations of 0.0820 and 0.0035 mg/L, respectively. These constituent detections remained below the GWPSs.
- ▶ A statistically significant decreasing temporal trend is evident for barium and molybdenum at M-56A; for cobalt at M-57A; and for molybdenum at M-58A. A statistically significant increasing temporal trend is evident for arsenic at M-56A and M-58A and for chromium at M-57A.

CONCLUSIONS

Based on the results of the statistical evaluation presented in Attachment A and pursuant to the CCR Rule (257.102[c]), there are currently no GWPS exceedances or exceedances of respective background threshold values in Appendix IV constituent concentrations based on evaluation of the groundwater monitoring data collected in April 2022. Assessment monitoring for Appendix IV constituents at the SEDI have been below GWPSs for the minimum of two consecutive sampling events following CCR removal from the unit as of October 2021. As documented in the Geoscience Technical Memorandum, the SEDI has shown routine compliance under Assessment Monitoring since 2015, including two consecutive semi-annual sampling events post-closure certification. These findings are consistent with the Federal Register (2020), which states the SEDI can achieve clean closure status if, for two consecutive sampling events following CCR waste removal, Appendix IV groundwater constituent concentrations are compliant with their respective GWPSs. CCR removal and decontamination of the CCR unit are complete and constituent concentrations throughout the CCR unit and any areas affected by releases from the CCR unit have been removed and groundwater monitoring concentrations do not exceed the groundwater protection standard established pursuant to § 257.95(h) for constituents listed in appendix IV to this part.

CERTIFICATION STATEMENT

This limited certification for closing the Sedi Pond CCR unit addresses only the groundwater quality monitoring concentrations relative to groundwater quality protection standards. This limited certification does not address removal of CCR from the CCR unit.

I, Rebecca Weaver, being a Registered Professional Engineer in good standing in the State of Arizona, do hereby certify, to the best of my knowledge, information, and belief that the concentrations of all Appendix IV concentrations have remained less than applicable Groundwater Protection Standards in CCR compliance wells located downgradient of the Sedimentation Pond for two consecutive sampling events following removal of the CCR from the unit based on the statistical analysis contained in the Wood Technical Memo titled, CCR Groundwater Assessment Monitoring Statistical Evaluation of Appendix IV Constituent Data Collected from the Sedimentation Pond through April 2022. Further, I certify that the referenced statistical analysis has been prepared in accordance with the accepted practice of engineering and that the work was completed in accordance with the requirements of 40 CFR § 257.95 and 40 CFR § 257.102.

**Subject: CCR Groundwater Assessment Monitoring
Statistical Evaluation of April 2022 Sedimentation Pond Data
Arizona Public Service Company Cholla Power Plant– Navajo County, Arizona**

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) documents the routine statistical evaluation of assessment monitoring groundwater data collected in April 2022 from the Sedimentation Pond (SEDI) located at the Arizona Public Service Company (APS) Cholla Power Plant (Cholla) in Navajo County, Arizona. The SEDI is being closed by removal. The SEDI stopped receiving wastes in October 2020 and, by October 2021, the unit was demolished and excavated. The objectives of the subject statistical evaluation are to assess groundwater monitoring compliance and to determine closure status for the SEDI.

This statistical evaluation is completed by Geoscience Consulting Strategies LLC in accordance with the Statistical Data Analysis Work Plan (SDAWP) for the Cholla Power Plant and the Coal Combustion Residuals (CCR) Rule (Federal Register, 2018; Wood, 2018).

2.0 STATISTICAL EVALUATION APPROACH

The subject analysis was completed using ProUCL software (United States Environmental Protection Agency [US EPA], 2015). Appendix A contains the ProUCL data upload table Wood Environment & Infrastructure Solutions, Inc. (Wood) put forth to complete the subject analysis, which includes SEDI compliance well data collected from November 2015 through April 2022.

The Appendix IV analytes are listed by name as column headers in the ProUCL data upload table. Each analyte has a corresponding data column (indicated with a "D_" prefix) that indicates if the analyte was detected or not at a concentration that exceeds the analytical reporting limit, where detectable concentrations are symbolized by a "1" and non-detectable concentrations are symbolized by a "0". The non-detectable concentration corresponds to the analyte's reporting limit value for the corresponding sample date. Field and split sample duplicates were retracted from the analysis.

Table 1 presents the concentrations of Appendix IV constituents in samples collected from SEDI background (i.e., M-62A) and compliance monitoring wells (i.e., M-56A, M-57A and M-58A) in April 2022. Additionally, Table 1 reflects BTVs that reflect groundwater samples collected between November 2015 and April 2022. The April 2022 sampling event constitutes the ninth sampling round under the SEDI Groundwater Assessment Monitoring program.

Appendix B presents the raw outputs from the Exploratory Data Analysis (EDA) of SEDI Appendix IV groundwater data incorporating the April 2022 sampling event, including temporal trend analysis for constituents exhibiting a non-detect frequency less than 50%, goodness of fit tests and summary statistics.

3.0 EXCEEDANCE ASSESSMENT

Table 2 summarizes the Groundwater Protection Standards (GWPS) for each Appendix IV constituent (Wood, 2019). GWPS selection is documented in the January 2019 Tech Memo and constitutes either the statistically calculated Background Threshold Value (BTV) (Table 1), the US EPA's promulgated Maximum Contaminant Level (MCL) for Drinking Water, or the risk-based alternative GWPS identified for constituents without MCLs, whichever value is highest. The updated BTV for antimony and lithium are higher than the respective US EPA promulgated, or risk-based alternative value, and constitute the GWPS shown in Table 2.

Table 2 summarizes: 1) compliance well lower confidence limit (LCL) comparisons to their respective GWPS for Appendix IV constituents, 2) which compliance wells exhibit statistically significant temporal trends, and 3) the type of LCL test applied after incorporating the October 2021 sampling event for each monitoring well. The addition of data to the sample population over time can cause the type of statistical test in Table 2 to change from previous evaluations.

This statistical analysis indicates there is insufficient evidence to declare a GWPS exceedance for SEDI monitoring wells M-56A, M-57A, and M-58A. Several compliance monitoring wells exhibit statistically significant ($p < 0.05$) temporal trends, including statistically significant ($p < 0.05$) decreasing temporal trends in M-56A (barium and molybdenum), M-57A (cobalt) and M-58A (molybdenum) in addition to statistically significant ($p < 0.05$) increasing temporal trends in M-56A (arsenic), M-57A (chromium) and M-58A (arsenic). Temporal trends can be present without an SSI exceedance because the current concentration trends fall below their respective GWPS.

4.0 RECOMMENDATION

The SEDI has shown routine compliance under Assessment Monitoring since 2015, including two consecutive semi-annual sampling events post-closure certification. These findings are consistent with the Federal Register (2015), which states the SEDI can achieve clean closure status if, for two consecutive sampling events following CCR waste removal, Appendix IV groundwater constituent concentrations are compliant with their respective GWPSs. On this basis, there is no statistical justification to suspect the SEDI is a source of contamination in groundwater for Appendix IV constituents.

Appendix IV	Lithium	mg/L	0.2	---	<0.20	<0.2	---	<1*	0.09	0.092	0.087	0.088
Appendix IV	Mercury	mg/L	0.0002	---	<0.00020	NA	---	<0.0002	<0.0002	<0.0002	<0.0002	<0.0002
Appendix IV	Molybdenum	mg/L	0.015	0.0024	0.0026	0.0028	0.0091	0.004	0.015	0.0041	0.0053	0.0032
Appendix IV	Total Radium	pCi/L	2.5	<0.7000	NA	0.8000	---	NA	<0.8000	<0.8000	<0.6000	<0.6
Appendix IV	Selenium	mg/L	0.01	---	<0.0005	NA	---	<0.0025	<0.0010	0.0016	0.0010	<0.0005
Appendix IV	Thallium	mg/L	0.0005	<0.0001	<0.0001	<0.0001	0.0002	<0.0005	<0.0002	<0.0002	0.0000	<0.0001

Notes:

Constituent concentrations that exceed BTVs are presented in bold text.

*The non-detectable sample concentration exceeds the corresponding BTV.

Acronyms:

--- = not applicable or evaluated
 BTV = Background Threshold Value
 mg/L = milligrams per liter
 NA = not available at the time of assessment
 SU = standard units
 NS = no standard
 pCi/L = picocuries per liter
 < = sample concentration below the reporting limit value
 SEDI = Sedimentation Pond
 TDS = total dissolved solids

Table 2
GWPS Exceedance Summary for Data Collected from the Sedimentation Pond through April 2022

Lower Confidence Limit (LCL) Results - Appendix IV Constituents									
Analyte	Units	GWPS	M-56A		M-57A		M-58A		Exceedance
			LCL	Recent Test	LCL	Recent Test	LCL	Recent Test	
Antimony	mg/L	0.05	0.0010	NP-LCL	0.0010	NP-LCL	0.0500	DQR	No
Arsenic	mg/L	0.01	0.0008	NP-LCL	0.0028	P-LCL	0.0038	P-LCLT	No
Barium	mg/L	2	0.0388	P-LCLT	0.0420	NP-LCL	0.0614	P-LCL	No

Chromium	mg/L	0.1	0.0024	P-LCL	0.0014	P-LCLT	0.0010	NP-LCL	No
Cobalt	mg/L	0.006	0.0006	P-LCL	0.0049	NP-LCL	0.0010	NP-LCL	No
Fluoride	mg/L	4	0.4000	NP-LCL	0.4000	NP-LCL	0.4000	NP-LCL	No
Lead	mg/L	0.015	0.0005	DQR	0.0005	NP-LCL	0.0005	NP-LCL	No
Lithium	mg/L	0.2	0.2000	NP-LCL	0.2000	NP-LCL	0.2000	NP-LCL	No
Mercury	mg/L	0.002	0.0002	DQR	0.0002	DQR	0.0002	DQR	No
Molybdenum	mg/L	0.1	0.0052	P-LCLT	0.0035	P-LCL	0.0017	NP-LCL	No
Total Radium	pCi/L	5	0.6275	P-LCL	0.6000	NP-LCL	0.7000	NP-LCL	No
Selenium	mg/L	0.05	0.0005	NP-LCL	0.0005	NP-LCL	0.0005	NP-LCL	No
Thallium	mg/L	0.002	0.0001	NP-LCL	0.0001	DQR	0.0001	DQR	No

Notes:

Statistically significant temporal trend (p<0.05)

Acronyms:

GWPS = Groundwater Protection Standard
 mg/L = milligrams per liter
 pCi/L = picocuries per liter

P-LCL = Parametric Lower Confidence Limit
 NP-LCL = Non-Parametric Lower Confidence Limit
 P-LCLT = Parametric Lower Confidence Limit with a Trend
 DQR = Double Quantification Rule

Subject: Sedi Pond Closure by Removal and Construction Certification

Dear Mr. Conrad:

Coal Combustion Residual (CCR) removal and construction activities associated with closing the Sedi Pond CCR unit started on May 3, 2021 and were completed on October 8, 2021. These activities were completed consistent with the amended closure plan dated November 4, 2020, with the exception of the completion date. The amended closure plan for the Sedi Pond estimated a completion of closure construction activities prior to October 2021. The actual completion of construction was October 8, 2021.

A summary of Closure by Removal (CbR) construction activities is provided below:

1. Decontamination of all the existing concrete structures (divider wall, spillway, inlet structure, and outlet structure) within or associated with the CCR unit. The concrete structures were decontaminated by removing any CCR material that was adhered to the walls or footings of the structures. Upon completing decontamination activities, the concrete structures were visually inspected to verify all CCR material had been removed.
2. Demolishing and removing the decontaminated concrete structures and old pumphouse associated with the CCR unit. The concrete structures were demolished and hauled to the on-site inert landfill for disposal. The old pumphouse was cleared of any asbestos and lead paint, then was demolished for disposal or recycling.
3. Excavating and removing any remaining CCR sediments within the Sedi Pond footprint. CCR removal within the excavation was accomplished by removal of any underlying material that, by visual inspection, appeared possibly to be impacted by CCR or non-native. The CCR material and impacted soil were removed and transported to the Bottom Ash Monofill.
4. Backfilling and compacting the excavation with clean soil to fill the basin and grading the final surface to drain into existing drainage facilities.

This limited certification for closing the Sedi Pond CCR unit addresses only the removal of CCR from the CCR unit. This limited certification does not address groundwater quality monitoring concentrations relative to groundwater quality protection standards.

I, David E. Mickanen, being a Registered Professional Engineer in good standing in the State of Arizona, do hereby certify, to the best of my knowledge, information, and belief that the information contained in this certification has been prepared in accordance with the accepted practice of engineering. I certify, for the removal of CCR from the above-referenced CCR Unit, that the work was completed in accordance with the Closure Plan (CH_ClosPlan_004_20201104_Sedi Pond) and the requirements of 40 CFR § 257.102

If you require additional information, please do not hesitate to contact me at (602) 648-2310.

Yours sincerely,

AECOM Technical Services, Inc
