1 INTRODUCTION

This Annual Groundwater Monitoring and Corrective Action Report for 2023 (Annual Report) was prepared on behalf of Arizona Public Service Company (APS) by WSP USA Environment & Infrastructure Inc. (WSP) for the Four Corners Power Plant (FCPP or the Site) located in Fruitland, New Mexico. The Annual Report summarizes groundwater monitoring and corrective action activities conducted in 2023 to support compliance with coal combustion residuals (CCR) groundwater monitoring and corrective action requirements detailed in 40 Code of Federal Regulations (CFR) Part 257 (herein referred to as the CCR Rule) (Federal Register, 2020).

The CCR Rule became effective on October 19, 2015 and established standards for the disposal of CCR in landfills and surface impoundments (CCR units). In particular, the CCR Rule set forth groundwater monitoring and corrective action requirements for CCR units. The CCR Rule includes the requirement that an "annual groundwater monitoring and corrective action report" be prepared by January 31 for the preceding calendar year (the reporting period). This Annual Report prepared for the 2023 calendar year is intended to document the status of the groundwater monitoring and corrective action programs for each CCR unit, summarize key actions completed, and forecast key activities for 2024. APS additionally considers this report to meet the semi-annual reporting requirements of 40 CFR §257.97(a) for selecting and designing remedies pursuant to the CCR Rule during the last half of 2023.

The remainder of this section (Section 1) provides a summary description of the power generating facility, the CCR units present at the facility, the facility's environmental setting which forms the basis for assessment of underlying groundwater conditions, and an overview of the CCR groundwater monitoring system. Section 2 presents key groundwater monitoring and corrective action activities performed during the reporting period. Sections 3 and 4 summarize in further detail the activities performed for the groundwater monitoring and corrective action programs respectively during the reporting period. Key activities identified for the upcoming year are presented in Section 5.

1.1 SITE BACKGROUND

1.1.1 FACILITY AND CCR UNIT DESCRIPTION

Facility Description. FCPP is an operating power plant owned by APS and four other utilities. The plant burns low sulfur coal in two electrical generating units (Units 4 and 5) and has a net generating capacity of 1,540 megawatts. FCPP formerly had five generating units and a capacity of 2,040 megawatts; Units 1, 2, and 3 were retired in December 2013 and decommissioned between 2014 and 2016. Coal burned at the plant is generally sourced from the nearby Navajo Mine (Navajo Transitional Energy Company, 2016).

Facility Location. The plant and associated infrastructure are located approximately 20 miles southwest of the city of Farmington in the Colorado Plateau physiographic province of northwestern New Mexico (**Figure 1-1**). The land on which the plant resides is leased from the Navajo Nation and is primarily located in Section 36, Township 29 North, and Range 16 West of the northwest quadrant of the New Mexico Principal Meridian and Base Line.

CCR Unit Description. Plant infrastructure includes three single CCR units in the main plant area where the generating units are located (i.e., the Upper Retention Sump [URS], Combined Waste Treatment Pond [CWTP], and Return Water Pond [RWP]) and one single CCR unit (the Dry Fly Ash Disposal Area [DFADA]) and one CCR multiunit (referred to as Multiunit 1 comprised of the Lined Ash Impoundment [LAI] and Lined Decant Water Pond [LDWP]) to the west of the main plant area within the FCPP lease boundary (also known as the disposal area where CCR is currently and has historically been placed) (**Figure 1-2**). **Table 1-1** summarizes the location, function, operation, size/construction, and history of each regulated unit. The boundaries of CCR units depicted in **Figure 1-2** are based on available historical plans for the units.

1.1.2 ENVIRONMENTAL SETTING

Unless otherwise noted, the following information is abstracted from the *CCR Monitoring Well Network Report and Certification* by AECOM Technical Services, Inc. (AECOM, 2017).

Climate. The plant is located in a semi-arid climate on the western flank of the San Juan Basin. The area receives an average of 8.6 inches of precipitation and 12.6 inches of snow per year.

Topography. The main plant area of the FCPP is located at an elevation of approximately 5,340 to 5,360 feet (ft) above mean sea level (amsl). The topography of the FCPP area is characterized by rolling terrain, steep escarpments, and incised drainages/arroyos. In the vicinity of the plant, the ground surface is relatively flat, sloping to the west at approximately 20 ft per mile; however, surface drainage immediately near Morgan Lake flows towards the lake. About one mile west of the plant, the level ground surface drops rapidly to 5,200 ft amsl. Chaco Wash (also known as Chaco River) is located west of the abrupt change in elevation and ephemerally flows north to the San Juan River.

Surface Water Hydrology. FCPP is situated on the southern bank of Morgan Lake, an approximately 1,300-acre manufactured lake that has a maximum storage capacity of 39,000 acre-ft of water and supplies cooling water to the plant. Morgan Lake was formed by damming a westerly flowing stream (now known as 'No Name Wash') and is replenished by an underground pipeline (i.e., aqueduct) that routes flow from the San Juan River located approximately 3 miles north of the FCPP. The typical water surface elevation of the lake is approximately 5,330 ft amsl. Morgan Dam intermittently discharges in accordance with National Pollutant Discharge Elimination System (NPDES) Permit No. NN0000019 to 'No Name Wash' which flows west of the lake to Chaco Wash.

Site Geology. The San Juan Basin is a structural depression that lies at the eastern edge of the Colorado Plateau (Dames & Moore, 1988). The dominant geographic feature in the vicinity of FCPP is the Hogback Monocline located to the west of Chaco Wash; this monocline is a steep (38 degree) eastward-dipping flank composed of Cretaceous sedimentary rock (Dames & Moore, 1988).

There are two 'uppermost geologic units' that underlie the FCPP Site and immediate vicinity. These units are expected to influence groundwater flow and result in variations in naturally occurring constituent concentrations across the Site. The units are as follows:

- **Pictured Cliffs Sandstone:** The Pictured Cliffs Sandstone is the uppermost geologic unit beneath the plant and the CCR units located in this vicinity (i.e., the URS, the CWTP, and the RWP as depicted in **Figure 1-2**). This unit is a fine- to medium-grained marine sandstone. The lower portions of the Pictured Cliffs Sandstone represent a transitional sequence between this formation and the underlying Lewis Shale as indicated by alternating thin beds of very fine-grained sandstone and silty shale. The Pictured Cliffs Sandstone forms a capstone on an exposed cliff face located between the main plant site and the CCR units located to the west (i.e., LAI, LDWP and the DFADA).
- **Lewis Shale:** The Lewis Shale is a marine shale that contains evaporite deposits resulting in naturally occurring saline groundwater conditions. The Lewis Shale is the uppermost geologic unit that underlies the LAI, LDWP, and DFADA and spans west of the Pictured Cliffs Sandstone cliff face approximately 1.5 miles westward to the base of the Hogback Monocline. The regional thickness of the Lewis Shale is approximately 500 ft and is underlain by the Cliff House Sandstone. The Lewis Shale consists of a weathered shale subunit overlying a hard, unweathered shale subunit. The thickness of the weathered shale varies between 11 and 47 ft with an average thickness of 30 ft within the vicinity of the Site (Dames & Moore, 1988). The weathered shale is not as thick when overlain by the Pictured Cliffs Sandstone in the vicinity of the plant site. At the RWP, subsurface investigations identified no weathered Lewis Shale and a dip in the unweathered shale to the northeast, towards Morgan Lake (Wood, 2020a). The Lewis Shale subunit contains thin sandstone lenses that vary in thickness from 1 to 7 ft; the sandstone is fine to very fine-grained and cemented by calcium carbonate (Dames & Moore, 1988). The unweathered shale is significantly less permeable than the weathered shale. The unweathered shale is very fine-grained to silty and contains periodic siltstone and sandstone lenses (Dames & Moore, 1988). The surface of the unweathered shale slopes towards the Chaco Wash in the disposal area at approximately the same slope as land surface (Dames & Moore, 1988) but displays some irregularity resulting in varying levels of

saturated thickness in the weathered shale. The weathered Lewis Shale is variably saturated and hydraulically interconnected with alluvial deposits of Chaco Wash. The low-permeability unweathered shale underlying the Pictured Cliffs Sandstone results in a perched saturated zone in this region.

Applicable Hydrostratigraphy. Three general hydrostratigraphic units are conceptualized beneath the FCPP and associated CCR units. These units form the basis for the Conceptual Site Model (CSM) developed by AECOM (AECOM, 2017) for the purpose of designing the Site CCR groundwater monitoring system and establishing the working basis for statistically evaluating groundwater conditions underlying the Site.

The first hydrostratigraphic unit (Pictured Cliffs Sandstone) is dominant under the plant area, which is located in an elevated area south of Morgan Lake (**Figure 1-2**). Three CCR units (i.e., the URS, the CWTP, and the RWP) reside within this area. The Pictured Cliffs Sandstone is saturated below the URS and the CWTP and thus serves as the uppermost water bearing unit for these surface impoundments. While the Pictured Cliffs Sandstone is unsaturated beneath the RWP, this hydrostratigraphic unit is the uppermost water bearing unit should a leak from the RWP occur (the underlying Unweathered Lewis Shale prevents appreciable vertical migration of groundwater). The Pictured Cliffs Sandstone extends from ground surface (between approximately 5,340 to 5,360 ft amsl) to approximately 5,300 ft amsl in the plant area. Groundwater underlying the URS and CWTP is strongly influenced by Morgan Lake (at a surface elevation of approximately 5,330 ft amsl) and generally flows northward towards the lake. However, construction and operations of the plant have resulted in disturbed ground conditions and associated impacts are not well understood.

The second hydrostratigraphic unit (Weathered Lewis Shale/Alluvium) underlies the Pictured Cliffs Sandstone in the plant area and the Multiunit 1/DFADA CCR units in the disposal area, approximately 1 mile west of the plant (**Figure 1-2**). The Weathered Lewis Shale and the hydraulically connected alluvial deposits along Chaco Wash are designated as the uppermost water bearing unit in the disposal area. Although the Lewis Shale is geologically continuous in this area, it is unsaturated in the vicinity of the DFADA. The water table in the Weathered Lewis Shale can exhibit local seasonal fluctuations that are attributed to interactions between rates of groundwater recharge and discharge (Dames & Moore, 1988) from/to Morgan Lake (based on proximity), historical unlined ponds, and Chaco Wash. Groundwater flow underlying the disposal area CCR units generally follows the surface topography and descends to the west-southwest in the disposal area, mainly in the weathered shale and in local alluvial channels that drain toward the Chaco Wash (APS, 2013).

The third hydrostratigraphic unit (Unweathered Lewis Shale) consists of the unweathered Lewis Shale geologic unit and is a regionally extensive confining unit that forms the base of the uppermost aquifers in the plant and disposal areas. The Unweathered Lewis Shale is not capable of yielding usable quantities of water and thus is not an aquifer.

1.2 CCR GROUNDWATER MONITORING SYSTEM

Multiple monitoring wells are in place at FCPP to monitor groundwater conditions beneath the five Site CCR units and support ongoing assessment of impacts from potential leakage. **Table 1-2** identifies each well with associated CCR unit information, the date of well installation, and summary well construction details. **Figure 1-2** presents a map of the well locations.

Installation of the FCPP CCR groundwater monitoring system is summarized in the *CCR Monitoring Well Network Report and Certification* (AECOM, 2017) and the *Groundwater Monitoring Network Certification Report for the Return Water Pond* (Wood, 2020a). These reports certify the CCR groundwater monitoring system as compliant with 40 CFR §257.91(a) through I. Per the CCR Rule, Site monitoring systems are required to evaluate groundwater quality that is representative of background (i.e. groundwater that has not been affected by leakage from a CCR unit) and groundwater passing the downgradient boundary of each CCR unit, in the uppermost water bearing hydrostratigraphic unit underlying the CCR unit.

In addition to the CCR groundwater monitoring system wells, there are many non-CCR supplementary monitoring wells and extraction wells at the Site that are not part of the CCR groundwater monitoring systems but may provide useful information to the program. Groundwater extraction at the Site predates implementation of the CCR Rule. Although some extraction wells have been installed as part of interim response measures (see Section

4.3), many older extraction wells are inactive in terms of extraction operations, but the well can be monitored to assess groundwater conditions. **Table 1-2** and **Figure 1-2** identify the supplemental and extraction wells.

1.2.1 MONITORING SYSTEM DESCRIPTION

1.2.1.1 BACKGROUND GROUNDWATER MONITORING WELLS.

Background water quality at the Site can be established by a single monitoring well or a group of monitoring wells. If a group of monitoring wells is used, these wells should be screened within the same lithologic unit, exhibit similar groundwater chemistry, illustrate similar statistical merits, and be supported by the CSM. The grouping and adequacy of background wells identified for FCPP to assess background water is adequate based on the current understanding of the geological and hydrostratigraphic conditions.

The processes used to evaluate and select the CCR unit background monitoring wells are documented in the *CCR Monitoring Well Network Report and Certification* (AECOM, 2017) and the *Groundwater Monitoring Network Certification Report for the Return Water Pond* (Wood, 2020a). The selected background monitoring wells and the rationales in selecting them are summarized below by hydrostratigraphic unit.

Background Wells for the Pictured Cliffs Sandstone. Three wells (MW-71, MW-72, and MW-73) are used to determine background groundwater quality for the URS, the CWTP, and the RWP in the Pictured Cliffs Sandstone (**Table 1-2** and **Figure 1-2**). Although these wells are not upgradient of the RWP, the water quality indicated by MW-71, MW-72, and MW-73 is considered representative of unimpacted groundwater in the Pictured Cliffs Sandstone. Exploratory borings advanced during the design of the RWP CCR Monitoring System indicated that the Pictured Cliffs Sandstone upgradient of the RWP is unsaturated.

Background Wells for the Weathered Lewis Shale/Alluvium. Water in the Weathered Lewis Shale/Alluvium is perched and sourced by localized surface water infiltration. The hydrogeological regime as well as the fractured nature of weathered shale contributes to difficulties in reliably locating saturated sediments in the subsurface. On that basis, seven wells upgradient of Multiunit 1 and the DFADA, including MW-12R1, MW-43, MW-49A, MW-51, MW-50A, MW-55R, and MW-74, are designated to assess background groundwater quality for the Weathered Lewis Shale/Alluvium (**Table 1-2** and **Figure 1-2**). Many of these wells are routinely either dry or have a limited saturated thickness that precludes sampling; the wells are included in the program should conditions change in the future.

Due to the natural heterogeneity of the geologic and hydrostratigraphic conditions underlying the FCPP, background constituent concentrations are expected to be spatially heterogeneous across the Site. The Site is also expected to exhibit temporal heterogeneity due to local climatic regimes, potential leakage from Morgan Lake, and potential operational activity at the Site. The adequacy of designated background monitoring wells is assessed on an ongoing basis using groundwater elevation data, boron data, a working understanding of the spatial heterogeneity of geochemistry underlying the FCPP, and the statistical merits of the constituents of concern. Historical groundwater chemistry data may be consulted during the evaluation, but data preceding December 2011 will not be considered due to noted "matrix interference issues associated with saline waters" in samples analyzed prior to that date (APS, 2013).

1.2.1.2 DOWNGRADIENT CCR MONITORING WELL NETWORKS.

A total of 27 CCR compliance wells are used to monitor groundwater conditions downgradient of each CCR unit (**Table 1-2** and **Figure 1-2**). Downgradient waste boundary wells assess for leakage from each CCR unit, and the remaining downgradient wells evaluate the nature and extent of groundwater conditions associated with identified releases from CCR units. Of the 27 downgradient or downgradient boundary wells, 16 are installed in the Pictured Cliffs Sandstone. The remaining 11 downgradient or downgradient boundary wells are completed in the Weathered Lewis Shale/Alluvium. The grouping of monitoring wells, spatial density, and coverage of the monitoring well network is adequate based on the current understanding of the geological and hydrostratigraphic conditions. These wells are identified by respective CCR unit, as described below:

URS Downgradient Wells (Pictured Cliffs Sandstone). Before the URS was demolished and replaced with the Upper Retention Tank (URT), the groundwater flow direction underlying the URS was radially outward from the

CCR unit. On that basis, five downgradient boundary wells, MW-66, MW-67, MW-68, MW-69, MW-70 and four downgradient wells, MW-83, MW-84, MW-85, and MW-86 were installed around the perimeter and downgradient of the URS to evaluate leakage and the extent of groundwater impacts, respectively. The URS downgradient wells are screened within the Pictured Cliffs Sandstone hydrostratigraphic unit.

CWTP Downgradient Wells (Pictured Cliffs Sandstone). Similar to the URS, the groundwater flow direction underlying the CWTP was inferred to be radially outward from the CCR unit at the time the monitoring system was designed. Four downgradient boundary wells, MW-62, MW-63, MW-64, and MW-65 were installed around the perimeter of the CWTP. The *CCR Monitoring Well Network Report and Certification* (AECOM, 2017) identifies these wells as screened within the Pictured Cliffs Sandstone hydrostratigraphic unit. However, additional review of boring logs conducted as part of an Alternative Source Demonstration (ASD) in 2019 for the CWTP (Wood, 2020b) indicates that MW-62 and MW-63 are screened in non-native embankment fill materials including Weathered Lewis Shale and bottom ash that appear to influence the water quality of samples collected from these wells.

RWP Downgradient Wells (Pictured Cliffs Sandstone). Three downgradient boundary monitoring wells are installed within the Pictured Cliffs Sandstone hydrostratigraphic unit on the northeastern edge of the RWP – MW-88, MW-89, and MW-90. The Pictured Cliffs Sandstone is unsaturated beneath the RWP, and the wells are installed directly above the aquitard created by the underlying Unweathered Lewis Shale, which dips towards the northeast beneath the RWP. The groundwater monitoring system is designed to detect releases from the RWP, as a release would likely migrate vertically downward through the relatively permeable Pictured Cliffs Sandstone to the underlying Unweathered Lewis Shale, then migrate laterally along the surface of the aquitard. The next underlying aquifer (in the Cliff House Sandstone) is separated from the CCR unit by several hundred feet of the Unweathered Lewis Shale.

Multiunit 1 Downgradient Wells (Weathered Lewis Shale/Alluvium). Six downgradient boundary monitoring wells are in place along the toe of the western to southwestern edge of Multiunit–1 – MW-07, MW-08, MW-40R, MW-61, MW-75, and MW-76. In 2018, to characterize the nature and extent of impacts from the unit, downgradient monitoring well MW-87 was installed at the western lease boundary near the Chaco Wash. Monitoring data collected during both events are discussed further in Section 3.2. The screened interval for each Multiunit 1 downgradient well resides within the Weathered Lewis Shale/Alluvium hydrostratigraphic unit.

DFADA Downgradient Wells (Weathered Lewis Shale/Alluvium). Four downgradient boundary monitoring wells are identified downgradient of the DFADA: MW-10, MW-13, MW-44, and MW-48. Each well, except MW-48, is screened within the Weathered Lewis Shale/Alluvium hydrostratigraphic unit. The screened interval for MW-48 resides within the Unweathered Lewis Shale hydrostratigraphic unit. The groundwater monitoring system was designed to detect releases since the next underlying aquifer (in the Cliff House Sandstone) is separated from the CCR unit by several hundred ft of Lewis Shale. The downgradient DFADA wells are generally dry; however, insignificant amounts of condensate are known to sometimes accumulate in the wells. Excluding condensate, the wells were dry in 2023. Monitoring data collected during both events are discussed further in Section 3.2.

1.2.2 IMPLEMENTED CHANGES TO MONITORING SYSTEM

There were no changes to the Site CCR groundwater monitoring systems during the 2023 reporting period.

However, there were several new and replacement wells that supplement the monitoring system installed in 2023:

- At the URS, two new extraction wells (URS-06 and URS-07) and two new monitoring wells (URS-05 and URS-08) were installed in the haul road located north of the URT in December 2023. The extraction wells were installed to expand the URS seepage intercept system (an interim response measure) and the monitoring wells were installed to monitor groundwater extraction operations. The approximate location of these wells is included on **Figure 1-2**. A well completion report documenting the installation of these wells is currently in progress and will be completed during the 2024 reporting period (Section 5).
- At Multiunit 1, the utility of supplementary extraction and monitoring wells EW-11, EW-12, MW-06, DMX-05, EW-14, EW-15, and MW-34 were evaluated as part of a routine well maintenance program. The approximate locations of these wells are included on **Figure 1-2**. Activities conducted to address

identified concerns were completed in June 2023 and presented in the *Well Construction, Repair, and Modification Report* included in **Appendix A**:

- Extraction wells EW-11 and EW-12 were replaced with extraction wells EW-11R and EW-12R, respectively, due to deteriorated well screen conditions including roots in the well screen and the proximity to overhead utilities for the existing wells.
- Monitoring well MW-06 was replaced with monitoring well MW-06R due to deteriorated conditions in the existing well, including roots in the well screen.
- Monitoring well DMX-05 was replaced with extraction well DMX-05R because assessment of the original well indicated that groundwater extraction may be viable at this location.
- Dedicated pump equipment and attached discharge piping was removed from EW-14, EW-15, and MW-34 (also referred to as EW-34) and the intended use of these wells was converted from the extraction of seepage to the monitoring of groundwater conditions downgradient of the Multiunit 1.

2 SUMMARY OF KEY ACTIONS COMPLETED

A summary of key actions conducted at the Site during 2023 to address CCR Rule requirements is as follows:

- *Documentation of Groundwater Monitoring Activities Conducted in 2022* – 40 CFR §257.90(e) requires that an Annual Groundwater Monitoring and Corrective Action Report for applicable sites be prepared for existing CCR units annually on January 31 of the following year. During the reporting period the *Annual Groundwater Monitoring and Corrective Action Report for 2022* (WSP, 2023a) was prepared, placed in the facility's operating record, and posted to the APS CCR information webpage in accordance with 40 CFR §257.105(h)(1) and 40 CFR §257.106(h)(1).
- *Continuation of the Detection Monitoring Program at the CWTP, DFADA, and RWP* – 40 CFR §257.94(b) requires the continuation of detection monitoring at a semi-annual frequency for Appendix III constituents at CCR units where statistical analysis of Appendix III constituent data do not indicate a statistically significant increase (SSI) over background. Section 3.2 presents the results of detection monitoring data collected on a semi-annual basis from the CWTP, DFADA and RWP in 2023.
- *Start of the Assessment Monitoring Program at the CWTP* – 40 CFR §257.95 requires conducting assessment monitoring for Appendix IV constituents within 90 days of declaring an SSI over background and annually thereafter. Semi-annual monitoring of Appendix III and detected Appendix IV constituents is also required. Section 3.1.2 summarizes the activities performed for the transition from detection monitoring to assessment monitoring. Section 3.3 presents the results of assessment monitoring data collected on a semi-annual basis from the CWTP in 2023.
- *Completion of Statistical Analyses for Collected Appendix III and IV Constituents at the CWTP – 40 CFR §257.93(h)* requires routine statistical analysis of Appendix III constituent data from CCR units in the detection monitoring program and of Appendix IV constituent data from the CCR units in the assessment monitoring program. During the reporting period, one statistical analysis was performed using updated Appendix III constituent data and one statistical analysis was performed using updated Appendix IV constituent data collected from CWTP monitoring wells. The statistical analyses are summarized in Section 3.3.
- *Preparation of a Semi-annual Progress Report on Remedy Selection for Multiunit 1 and the URS* – 40 CFR §257.97(a) requires the preparation of semi-annual reports which document the progress of remedy selection for CCR units that have impacted groundwater. The ninth semi-annual report was prepared to fulfill that requirement in July 2023 of the reporting period (Section 4.5). Activities supporting remedy selection conducted during the second semi-annual reporting period of 2023 are summarized in Section 4.4.
- *Interim Response Measures at the URS* – Startup of groundwater extraction from CM-01 and CM-02 began in February 2022 and APS continued to operate the seepage extraction system throughout the reporting period. The extracted groundwater is discharged into a plant sump for reuse in plant operations. Additionally, the groundwater model previously completed for the URS (Wood, 2019a) was reviewed, and an update of the model conditions completed to reflect current interim response measures at the URS. The results of the groundwater model update and evaluation are summarized in Section 4.4.1.
- *Interim Response Measures at the Multiunit 1* – APS operated the Northern and Southern Intercept Trench throughout the reporting period to intercept and collect seepage from Multiunit 1 and closed surface impoundments. The extracted groundwater is reused in plant operations. The 2023 Northern and Southern Intercept Trench operations are summarized in Section 4.3.
- *Continuation of the CWTP Dredging Program* – APS continued removing CCR from the CWTP through mechanical excavation and hydraulic dredging. CWTP dredging activities are anticipated to continue into Q2 2024.
- *Well Construction, Repair, and Modification*. APS contracted Montgomery & Associates to provide direction and oversight for various modifications to non-CCR monitoring system wells. All work for that effort was

completed in June 2023. A technical report documenting that work, dated September 26, 2023, is included as noted in Section 1.2.2

3 GROUNDWATER MONITORING PROGRAM

The groundwater monitoring and corrective action process defined in the CCR Rule includes a phased approach to groundwater monitoring, leading (if applicable) to the establishment of groundwater protection standards (GWPSs) for each CCR unit. Exceedances of the GWPSs that are determined to be statistically significant can trigger requirements for additional groundwater characterization and corrective measures assessment followed by implementation of a corrective action program.

The first phase of groundwater monitoring is the detection monitoring phase. Detection monitoring focuses on a set of CCR constituents (listed in Appendix III of the CCR Rule) that are more mobile and generally present at higher concentrations. These attributes can contribute to making constituents readily quantified and early indicators of a potential release from a CCR unit to groundwater. If SSIs are detected for Appendix III constituent over established background levels, otherwise known as background threshold values (BTVs), in downgradient waste boundary wells and cannot be demonstrated to be associated with a source other than the CCR unit, the groundwater monitoring moves into the second phase, assessment monitoring. **Table 3-1** summarizes the BTVs for Site CCR units.

The second phase of groundwater monitoring focuses on the constituents listed in Appendix IV of the CCR Rule. The Appendix IV constituents are generally less mobile and typically occur at lower concentrations in groundwater than the Appendix III constituents. Concentrations of Appendix IV constituents in downgradient wells are compared to established GWPSs. The GWPSs, established for Appendix IV constituents only, are the higher of either the federal Safe Drinking Water Act Maximum Contaminant Level, alternative human health risk-based GWPSs established in the CCR Rule, or the background concentration for each constituent. **Table 3-1** summarizes the GWPSs for Site CCR units.

If exceedances of the GWPSs are determined to be occurring in the downgradient boundary wells at statistically significant levels (SSLs) and no alternative sources for the exceedances can be demonstrated, then both additional groundwater characterization and assessment of corrective measures are initiated. Following an assessment of corrective measures, a remedy (or set of remedial activities) is selected and implemented as the groundwater corrective action program for the CCR unit. According to the CCR Rule, groundwater corrective action will continue until compliance with the GWPSs has been attained in all impacted wells and sustained for a period of three consecutive years.

3.1 PROGRAM STATUS

Based on available Appendix III and Appendix IV concentrations and statistical analyses completed as of the end of the 2023 reporting period, the DFADA and RWP are currently in detection groundwater monitoring and the CWTP is currently in assessment groundwater monitoring. During the 2023 reporting period all DFADA and RWP downgradient compliance wells continued to be dry and therefore precluded groundwater sampling and groundwater quality evaluation. The URS and Multiunit 1 (the LAI/LDWP) are in corrective action and continue to be monitored as part of the assessment groundwater monitoring program.

Summaries of groundwater monitoring program activities performed during the reporting period are presented in the following sections.

3.1.1 PROBLEMS ENCOUNTERED AND RESOLUTIONS TO PROBLEMS

The following problems and associated resolutions were encountered during the reporting period:

- During the May 2023 monitoring event, Eurofins TestAmerica Laboratories, Inc. (Eurofins) was unable to meet the required reporting limit (RL) of less than (<) 1 mg/L for many of the fluoride analysis performed using United States Environmental Protection Agency (USEPA) drinking water Method 300.0. Although the laboratory had achieved the acceptable RLs in the past during the analysis of samples collected from wells in the Four Corners CCR monitoring program, the laboratory refused to analyze the samples collected during the May 2023 event without performing multiple dilutions due to elevated total dissolved solids and sulfate concentrations in these samples which can adversely affect laboratory equipment. APS and WSP were notified that the fluoride RLs would be elevated, and it was requested that Eurofins report fluoride to the method detection limit (MDL) to achieve the lowest level of detection. The MDLs ranged from less than 2 to less than 80 mg/L and Eurofins was unable to re-analyze the samples without the dilutions. After the May 2023 monitoring event, project requirements were discussed with Eurofins and they agreed to target RLs based upon the previous level of dilutions achieved on a sample by sample basis. Additionally, Eurofins proposed USEPA solid waste Method 9056A as an alternative ion chromatography method to USEPA drinking water Method 300.0, that would allow for less sample dilution and lower reporting limits, more like those achieved in the past. In response, a small subset of samples was submitted to be analyzed for fluoride by Method 9056A during the November 2023 monitoring event to compare the methods. A split sampling analysis presenting the sampling methods, analytical results, and overall findings will be presented in a technical memorandum to be completed in 2024.
- Access to the well vault for MW-67, a URS downgradient boundary well, presented a challenge for samplers during the May and November 2023 sampling events. An assessment of the well vault, and potentially necessary repairs, are planned to be performed in 2024.
- A groundwater sample was unable to be collected from downgradient well MW-87 during the November 2023 sampling event due to an obstruction in the well that was measured at approximately 32.68 ft below the top of the casing (btoc). Roots and plant matter were identified during the May 2023 sampling event and is likely associated with roots or plant matter that have migrated through the well screen into the interior of the well casing. Efforts to clear the obstruction are planned to take place in 2024 and the well will be monitored for further obstructions during future semi-annual monitoring events.

3.1.2 GROUNDWATER MONITORING PROGRAM TRANSITIONS

The CWTP transitioned from detection monitoring to assessment monitoring during the 2023 reporting period (**Appendix B**). The statistical analysis of Appendix III constituent data collected through January 2023, inclusive of the November 2022 semi-annual detection monitoring results and a January 2023 resampling event results, indicated an SSI over background. A declaration of SSIs over background concentrations was made on April 10, 2023 for CWTP monitoring well MW-62 for two detection monitoring constituents, boron, and calcium. Pursuant to the CCR Rule, the owner or operator must, within 90 days of declaring an SSI for an Appendix III constituent, either establish an assessment monitoring program for the CWTP or demonstrate that a source other than the CWTP is the cause of the SSI declaration(s) (Federal Register, 2020). Given that the CWTP has had ongoing low-level SSIs attributable to surface/groundwater interactions, natural spatial variability, and the presence of potentially-impacted-fill materials in the vicinity of downgradient system wells (Wood, 2019; Wood, 2020; Wood, 2022) which could not be addressed with an alternative analysis approach, the CWTP was transitioned to assessment monitoring during the 2023 reporting period out of an abundance of caution. In accordance with the CCR Rule, assessment monitoring of the CWTP wells was initiated in May 2023, within 90 days of declaring an SSI for an Appendix III constituent.

3.1.3 ALTERNATIVE SOURCE DEMONSTRATIONS

No Alternative Source Demonstrations (ASDs) were conducted during the 2023 reporting period.

3.2 MONITORING DATA COLLECTED

CCR groundwater monitoring was conducted at FCPP during the 2023 reporting period in accordance with the updated *Site Sampling and Analysis Plan* (SAP) (Wood, 2022a). The SAP documents the methods and procedures used to conduct groundwater sampling, analyze collected samples for CCR constituents, and assess associated analytical data for quality assurance purposes.

The following sections summarize groundwater monitoring activities conducted in 2023. **Table 3-2** identifies when monitoring occurred, and which units were monitored. Unless otherwise noted, detection monitoring included evaluation of samples for Appendix III constituents on a semi-annual basis (40 CFR §257.94[b]) and at a minimum, assessment monitoring included evaluation of samples for all Appendix IV constituents on an annual basis (40 CFR §257.95[b]) and detected Appendix IV constituents as well as all Appendix III constituents on a semi-annual basis (40 CFR §257.95[d][1]). To simplify groundwater monitoring logistics, CCR compliance wells in assessment monitoring were evaluated for all Appendix IV constituents on a semi-annual basis in 2023.

The DFADA wells are completed in either the Weathered Lewis Shale/Alluvium or Unweathered Lewis Shale while the RWP wells are completed in the Pictured Cliffs Sandstone. These hydrostratigraphic units are known to be dry downgradient of the DFADA and the RWP. Thus, the DFADA and RWP groundwater monitoring systems are designed to detect releases by the presence of water (although insignificant amounts of condensate can accumulate in wells). During the May and November monitoring events, these wells were found to be dry, which is consistent with previous readings and indicates that releases from the DFADA and RWP did not occur in 2023.

Supplementary and extraction well water samples were also collected as part of characterization, pre-design and corrective measures evaluations conducted during the reporting period which include:

- Seepage intercept system (i.e., interim response measures) samples collected from sumps.
- Groundwater samples collected downgradient of seepage intercept systems.
- Surface water samples from the CWTP, Morgan Lake, and the cooling water canal adjacent to the CWTP.

As with the CCR groundwater samples, the supplementary samples were collected and analyzed using industry-standard procedures and in accordance with the SAP.

3.2.1 WATER LEVEL MONITORING

Appendix C presents hydrographs depicting groundwater elevations measured at downgradient CCR monitoring system wells over time. Groundwater elevations in the Pictured Cliffs Sandstone (i.e., plant area) and the Weathered Lewis Shale/Alluvium (i.e., disposal area) are graphed independently based on assessment of the data during initial CSM development; review of the data suggests that the two groundwater systems are likely not in direct communication. Unless otherwise noted below or within the hydrographs of **Appendix C**, hydrographs are based on water level measurements collected semi-annually during the groundwater monitoring events; therefore, the significant trends discussed below may be somewhat limited.

Downgradient and downgradient boundary wells for Multiunit 1 (MW-07, MW-08, MW-40R, MW-61, MW-75, MW-76 and MW-87): Groundwater elevations slowly declined at all Multiunit 1 downgradient and downgradient boundary wells in 2023 with the exception of minor trend fluctuations observed at MW-07, MW-08, and MW-87. The minor trend fluctuations observed at MW-08 and MW-87 are likely attributable to seasonal fluctuations in the groundwater table and interactions with stream flow within the Chaco Was (at MW-87). The increasing trend observed at MW-07 during the 2023 monitoring events is the first rise in groundwater elevations measured at this location since November 2019, however the groundwater elevations are still within the range of historical values.

MW-40R and MW-76 did not contain enough groundwater within the well casing to support the collection of groundwater samples during both the May and November 2023 semi-annual sampling events. Due to minimal groundwater and/or poor recovery rates, groundwater samples have not been collected from these wells since April 2021 per the SAP (Wood, 2022a).

Background wells for Multiunit 1 (MW-43, MW-49A, MW-50A, MW-51, MW-74): Water levels in background wells; MW-43, MW-49A, MW-50A, MW-51 remained stable in 2023 with a minor increase in groundwater levels at MW-49A from November 2022 to 2023 with an increase of 0.91 ft. Seasonal variations in groundwater elevations continue to be apparent at MW-74 (background well for Multiunit 1 and the DFADA and located downstream of Morgan Lake Dam), with the highest elevations occurring in early spring at approximately 5,202.40 ft amsl and lowest elevations occurring in late summer to late fall at approximately 5,198.70 ft amsl. Water level fluctuations at MW-74 (just south of 'No Name Wash') may be influenced by plant operations since the water level in the lake fluctuates based on plant requirements and discharges from Morgan Lake to 'No Name Wash'. Typical seasonal patterns appear to have continued during the 2023 reporting period.

MW-43, MW-50A, MW-51, and MW-74 all contained insufficient amounts of groundwater within their respective well casing during the May and November 2023 semi-annual sampling events and groundwater samples were not collected from these locations in 2023 per the SAP (Wood, 2022a). Due to minimal groundwater and/or poor recovery rates, groundwater samples have not been collected from these wells since April 2021.

Downgradient and downgradient boundary wells for URS (MW-66, MW-67, MW-68, MW-69, MW-70, MW-83, MW-84, MW-85, and MW-86): In contrast to the steadily declining trend observed since July 2016, groundwater elevations downgradient of the URS increased between November 2022 and November 2023 by up to 1.4 ft at MW-68; this well is located in the haul road west of the new URT. Although increases in water levels have occurred in URS wells before, the increases measured in the 2023 reporting period are notable because of the repeated occurrence (from November 2022 to May 2023 and then again in November 2023). The overall decline in water levels since 2016 is attributed to the decommissioning of the URS between June and December 2018 and pumping at interim response measure extraction wells CM-01 and CM-02 beginning in February 2022.

Downgradient boundary wells for the CWTP (MW-62, MW-63, MW-64, and MW-65): Between the November 2022 and May 2023 sampling events, groundwater elevations declined in all downgradient CWTP monitoring wells. Discharges to the unit ceased in November 2020 and water levels in the surface impoundment have been maintained at lower elevations since that time to prevent discharges from the unit to the adjacent canal during dredging (Section 4.5.2). Groundwater elevations continued to decline at MW-64 and MW-65 between May and November 2023; however, groundwater elevations increased slightly at MW-62 and MW-63 during the same time interval.

Background wells for URS and CWTP (MW-71, MW-72, and MW-73): Groundwater elevations at MW-71, MW-72, and MW-73 generally continued to decrease during 2023, with minor trend fluctuations attributed to seasonal variations.

Figures 3-1 and **3-2** present potentiometric surface maps that are representative of groundwater elevations prior to groundwater sampling in May and November 2023, respectively. Water levels measured at wells EW-14, EW-15, and MW-34, were collected approximately ten days later than water levels collected at all other wells located at the Site which were used to create the November 2023 potentiometric surface map. However, the delay in water level collection at these wells is not considered to be long enough to alter static water conditions due to temporal trends and the data collected at these wells is considered usable. The estimated direction and gradient of groundwater flow derived from collected groundwater elevation data are noted in the figures. Notably, the decline in groundwater elevations at the URS and CWTP wells appears to have significantly influenced groundwater flow directions in the vicinity of these units. At wells located in the vicinity of Morgan Lake, groundwater elevations appear to have been impacted by low lake levels associated with multiple river station outages from late 2022 through most of 2023 (the river station pumps water from the San Juan to Morgan Lake). Localized impacts from operation of the CM-01 and CM-02 extraction wells downgradient of the URS may also be contributing to lower water levels around the former URS.

3.2.2 GROUNDWATER FLOW ESTIMATION

The CCR Rule requires that groundwater flow rates beneath CCR units be estimated during each monitoring event. To meet the requirement, water levels measured at the time of sampling events were used to calculate the direction and magnitude of the hydraulic gradient in the vicinity of each unit using a spreadsheet tool available on the United States Environmental Protection Agency (USEPA) website (USEPA, 2014). Darcy's Equation for flow through porous media was then used with Site data (where available) and/or literature-based hydraulic

conductivity and effective porosity values for hydrogeologic units to estimate groundwater flow rates. Groundwater flow rates and gradient magnitudes were calculated separately for the Pictured Cliffs Sandstone underlying the URS and CWTP, respectively, in 2023, to evaluate the influence pumping at the URS extraction well system had at the units. **Table 3-3** summarizes the results of these calculations.

The hydraulic gradients and flow directions in the Lewis Shale underlying Multiunit 1 at the disposal area were relatively stable. The magnitude of the hydraulic gradient was 0.03 feet per foot (ft/ft) during each monitoring round and the direction of groundwater flow was southwest towards Chaco Wash (259.4 and 258.1 degrees from north for May and November 2023 measurements, respectively), which is comparable to historical gradient and direction values. The corresponding groundwater flow rate for May and November 2023 was 0.0002 feet per day (ft/d), which is also comparable to historical flow rates.

The data collected during the reporting period suggest that the water table in the plant area is relatively flat (as compared to other areas) and in hydraulic communication with Morgan Lake. The Hydraulic gradients and groundwater flows observed in the Pictured Cliffs Sandstone at the former URS and CWTP during the 2023 reporting period are discussed below:

- **For the Pictured Cliffs Sandstone underlying the former URS**, the magnitude of the hydraulic gradient was 0.001 ft/ft, for measurements taken in both May and November 2023. The direction of groundwater flow (collectively for all wells) was north-northwest towards Morgan Lake for both sampling events. The directions calculated were 334 and 331 degrees from north for measurements collected in May and November, respectively. Corresponding groundwater flow rates were 0.02 ft/d for measurements collected during both events in 2023. The URS extraction well pump operation appears to still have an impact on the groundwater flow direction in the area of the URS, which remains directed in a more northerly direction than past evaluations with some localized flow towards the extraction well system.
- **For the Pictured Cliffs Sandstone underlying the CWTP**, the magnitude of the hydraulic gradient was 0.0005 and 0.0004 ft/ft for measurements taken in May and November 2023, respectively. The direction of groundwater flow at the CWTP was significantly changed between November 2022 and May 2023, from the southwest (254 degrees) to the northeast (13 degrees), towards Morgan Lake. The flow direction again switched between May and November 2023 from the northeast (13 degrees) back toward the southwest (220 degrees). Corresponding groundwater flow rates were 0.01 ft/d for both measurements collected in 2023. Since the CWTP is being dredged, the water level in this unit is maintained by pumping water from the cooling water canal into the unit. The changes in groundwater flow directions observed in downgradient CWTP wells may be impacted by lower Morgan Lake levels and the dredging activity conducted in the CWTP during the reporting period.

3.2.3 SAMPLE COLLECTION

Groundwater samples were collected, labeled, preserved, and shipped in accordance with the SAP (Wood, 2022a). In some instances, the wells were observed to be dry upon monitoring or did not have enough water and could not be sampled (**Table 3-2**). In accordance with 40 CFR §257.93(i), which requires the measurement of total recoverable metals, collected groundwater samples were not field filtered prior to analysis. Pursuant to the SAP, quality control samples (i.e., field duplicates, field blanks and extra sample volume for matrix spike samples) were collected during each groundwater monitoring event. These samples are noted on associated chain-of-custody documentation.

3.2.4 SAMPLE ANALYSIS AND DATA VALIDATION

Groundwater samples were submitted to Eurofins and Radiation Safety Engineering, Inc. (Radiation Safety) located in Phoenix, Arizona for analysis. Eurofins evaluated samples for all constituents excluding radium. Radiation Safety performed the radium analyses. Both Eurofins and Radiation Safety are Arizona Department of Health Services-licensed laboratories (AZ0728 and AZ0462, respectively). **Appendix D** presents the associated Laboratory Reports of Analysis organized by CCR unit.

Table 3-2 identifies the analytes evaluated during each monitoring event. Analytes varied based on the monitoring program (i.e., detection vs. assessment monitoring) and the need for supplementary information useful in evaluating groundwater quality across the Site. The SAP identifies Appendix III and Appendix IV constituents with associated analytical methods. As disused in Section 3.1.1, a subset of samples was submitted for fluoride analysis by USEPA Method 9056A during the November 2023 monitoring event.

Following receipt of final laboratory reports of analysis, the reports and associated sample data collected during detection and assessment monitoring were evaluated for quality assurance purposes. The scope of the review was an USEPA Stage 2A validation (USEPA, 2009). **Appendix E** presents the *2023 Data Validation Report* which documents these reviews. No data was deemed unusable in 2023. All data qualifiers and reason codes are included in the *2023 Data Validation Report* (**Appendix E**).

3.2.5 SAMPLE RESULTS

Appendix F presents the groundwater sampling results for 2023 along with historical groundwater quality data for the Site. The groundwater quality data are discussed further in Section 4.2.

3.3 STATISTICAL ANALYSIS OF MONITORING DATA

Statistical analysis of Appendix III and Appendix IV constituent data was conducted during the reporting period to evaluate whether collected monitoring data indicate Site CCR units have adversely impacted underlying groundwater. These analyses were conducted pursuant to the Statistical Data Analysis Work Plan (SDAWP) developed for the Site (WSP, 2023b).

3.3.1 EVALUATION OF APPENDIX III CONSTITUENT DATA

Two CCR units remained in detection monitoring as of the end of 2023 which included: the DFADA and the RWP. There were no groundwater samples collected from the DFADA or the RWP CCR compliance wells during the reporting period due to insufficient groundwater availability in the respective monitoring wells, and thus no statistical analyses were performed using data collected from these units.

A statistical analysis of detection monitoring data collected at the CWTP through January 2023 was completed in April 2023 and is presented in **Appendix B**. The statistical analysis showed an initial exceedance for boron and calcium at MW-62 in November 2022. The exceedances of boron and calcium at MW-62 triggered a 1 of 2 resampling strategy and a resampling event was implemented in January 2023. The resampling detection results confirmed boron to exceed the associated BTV, and therefore the initial exceedance was statistically significant. The resampling detection results confirmed calcium to exceed the associated BTV, and therefore the initial exceedance was statistically significant. Based on the statistical evaluation and pursuant to the CCR Rule, the CWTP was transitioned to assessment monitoring.

3.3.2 EVALUATION OF APPENDIX IV CONSTITUENT DATA

Statistical analysis of assessment monitoring data occurred for one CCR unit, the CWTP, during 2023; both the URS and Multiunit are in Corrective Action. Initial assessment monitoring rounds were conducted in May 2023 (per 40 CFR §257.95[b]) and June 2023 (per 40 CFR §257.95[d][1]) at the CWTP following its transition from detection monitoring. Derivation of GWPSs and a statistical analysis of assessment monitoring data collected at the CWTP through June 2023 was completed in October 2023 and is presented in **Appendix G**. The statistical analysis indicated no Appendix IV constituents were detected at concentrations exceeding their respective GWPSs during the June 2023 groundwater sampling event. The statistical evaluation declared that there are no SSLs of Appendix IV constituents above their respective GWPSs at the CWTP.

4 CORRECTIVE ACTION PROGRAM

4.1 PROGRAM STATUS

Based on the declaration that one or more Appendix IV constituents are present at SSLs above GWPSs downgradient of Multiunit 1 and the URS, these units are currently in the corrective action program. Notification of the exceedances occurred on November 14, 2018, and were documented in the 2018 Annual Report (Wood, 2019b).

A summary of corrective action program activities conducted during the reporting period is presented in the following sections.

4.2 CHARACTERIZATION OF POTENTIAL RELEASES FROM CCR UNITS

To characterize releases from CCR units, 40 CFR §257.95(g)(1) requires: (i) the installation of wells to define the extent of contaminant plumes, (ii) collection of data on the nature and estimated quantity of material released, (iii) installation of at least one well at the facility boundary in the direction of contaminant migration, and (iv) sampling of these wells to characterize the nature and extent of the release.

Initial efforts to address the requirements of 40 CFR §257.95(g)(1) were documented in the *Hydrogeologic Investigation of Multiunit 1 and the Upper Retention Sump* (Wood, 2020c). However, due to the duration required to adequately characterize complex groundwater impacts, work supporting characterization of potential releases from CCR units is ongoing.

During the reporting period, activities conducted to address CCR Rule release characterization requirements downgradient of Multiunit 1 and the URS included:

- The collection of groundwater quality data from an expanded network of existing groundwater wells (Section 3.2);
- Delineation of the nature and extent of the release from Multiunit 1 and the URS in the form of plume maps (**Figures 4-1** through **4-5**).

Findings from these characterization activities are summarized as follows and further discussed in Section 4.4.

Multiunit 1: Molybdenum and cobalt are present at concentrations above their respective GWPSs in groundwater downgradient of Multiunit 1, including a region upgradient of MW-60 which is a past CCR conveyance corridor to former ash ponds. The use of this region for CCR management prior to the construction of Multiunit 1 makes it difficult to distinguish whether impacts are associated with the LAI or previous Site activities.

Assuming the LAI contributed to impacts upgradient of MW-60, the extent of molybdenum impacts associated with Multiunit 1 appear to be limited generally to the area directly downgradient of the LDWP and downgradient of the LAI along the northern edge of the LDWP (**Figures 4-1** and **4-2**).

The extent of cobalt concentrations that exceed the GWPS generally extend up to the SIT (**Figures 4-3** and **4-4**). During the reporting period, cobalt exceeded the GWPS (0.01 mg/L) at the following wells located upgradient of the SIT: MW-17R, MW-36R, MW-38R, MW-52, MW-60, MW-61, and MW-75. The maximum cobalt concentration observed during the reporting period was 0.22 mg/L at MW-36R.

Cobalt exceeded the GWPS at one well located downgradient of the SIT in 2023. MW-57, a supplementary well not part of the certified CCR monitoring system that is located approximately 180 feet downgradient of SIT, had a detection of cobalt at a concentration of 0.019 mg/L in November 2023. In addition to the elevated level of cobalt observed at MW-57, boron, chloride, and sulfate concentrations also increased which could be indicative of a

transient loss of containment in SIT operations. MW-57 is located partially downgradient of Sump 14 which was out of service from September to December 2022 due to a maintenance issue. MW-57 and Sump 14 are both located in the high flow zone downgradient of Multiunit 1 where increased groundwater flow rates at a magnitude of 10 times other portions of the trench were identified prior to the construction of the SIT (URS, 2013).

Four CCR constituents were present at concentrations exceeding Multiunit GWPSs downgradient of the SIT:

- Cobalt exceeded the GWPS (0.01 mg/L) at one well located downgradient of the SIT in 2023: MW-57, a supplementary well not part of the certified CCR monitoring system. The concentration of cobalt at MW-57 was 0.019 mg/L in November 2023. In addition to the elevated level of cobalt observed at MW-57, boron, chloride, and sulfate concentrations also increased in November 2023 which could be indicative of a transient loss of containment in SIT operations. MW-57 is located approximately 250 ft downgradient of SIT Sump 14 which experienced a maintenance issue from September to December 2022 that placed it out of service. MW-57 and Sump 14 are both located in the high flow zone downgradient of the Multiunit 1 where increased groundwater flow rates were identified prior to the construction of the SIT (URS, 2013).
- Lithium was measured at concentrations exceeding the established GWPS (1.8 mg/L) in samples collected from MW-05, MW-18, and MW-56 throughout 2023, and at MW-57 and MW-87 in May and November 2023, respectively. The lithium concentrations in these samples ranged from 2.0 to 2.8 mg/L. Lithium has not been measured at SSLs at the downgradient boundary wells for the Multiunit 1, so lithium is not an established COC for Multiunit 1.
- Radium was detected above the GWPS (5 picocurries per liter [pCi/L]) in samples collected from MW-56 and DMX-05R in November 2023 at concentrations of 6.4 and 5.4 pCI/L, respectively. DMX-05R, installed downgradient of the SIT in June 2023, was sampled for the first time in November 2023 with radium exceeding the GWPS at a detected concentration of 5.4 pCi/L. In contrast to the November 2023 results for DMX-05R, historical sampling results from other wells in its vicinity (DMX-06, MW-06, MW-87) have not detected radium at concentrations exceeding the GWPS. Radium concentrations at DMX-05R will be evaluated in future sampling events. Radium has not been measured at SSLs at the downgradient boundary wells for the Multiunit 1, so radium is not an established COC for Multiunit 1.
- Selenium, an Appendix IV constituent, was measured at concentrations exceeding the GWPS (0.092 mg/L) in samples collected in May and November 2023 from MW-56 at concentrations of 0.22 and 0.24 mg/L, respectively. Selenium has not been measured at SSLs at the downgradient boundary wells for Multiunit 1 and is therefore not an established COC for Multiunit 1.

URS: Fluoride is present at concentrations above the GWPS (4 mg/L) in groundwater in the vicinity of the URS. During the reporting period, the maximum concentration of fluoride observed was 19 mg/L at MW-66, located north of the former footprint of the URS. Fluoride also exceeded the GWPS at downgradient boundary wells MW-67 (13 mg/L), MW-68 (13 mg/L), and MW-69 (4.7 mg/L). Concentrations have declined in these wells since initial characterization of impacts and the demolition of the URS (the highest fluoride concentration observed downgradient of the URS was 32 mg/L); however, the extent of fluoride concentrations that exceed the GWPS has not changed.

The furthest location from the URS where measured concentrations of fluoride exceeded the GWPS (4 mg/L) in 2023 occurred at CM-02, which is an extraction well and not part of the certified CCR monitoring system. CM-02 is located approximately 115 feet downgradient of the northwest corner of the former URS footprint and the concentrations of fluoride during the May and November in 2023 were 4.1 and 4.2 mg/L, respectively (**Figure 4-5**).

DFADA: Although there was not enough water present in downgradient boundary DFADA wells to sample (Section 3.2), groundwater samples were collected during the reporting period from MW-11 and MW-16, which are both supplementary wells located more than 2,000 ft downgradient of the DFADA near surface drainage channels and upgradient of the SIT. As supplementary wells, MW-11 and MW-16 are not part of the certified CCR monitoring system for either the DFADA or Multiunit 1. Since MW-11 and MW-16 are completed in the Weathered Lewis Shale, the BTVs and GWPSs identified for Multiunit 1 (which are based on data collected from MW-49A and MW-74) in **Table 3-1** are the most applicable.

Cobalt concentrations at MW-11 in May and November 2023 were 0.022 and 0.025 mg/L, respectively, which exceed the Multiunit 1 GWPS of 0.01 mg/L. Cobalt concentrations at MW-11 have exceeded the Multiunit 1 GWPS since November 2021 when monitoring of the well for CCR constituents began. MW-11 is located approximately 650 feet upgradient of MW-16, which measured cobalt at a concentration of 0.010 in November 2023 (all previous cobalt data collected from MW-16 have been less than the GWPS). Molybdenum concentrations in samples collected from MW-11 and MW-16 during the 2023 sampling events were less than reporting levels.

The cobalt exceedances observed at MW-11 are difficult to explain. Detected boron concentrations, which are typically elevated in samples collected from CCR-impacted groundwater have remained relatively stable since CCR constituent monitoring began at this well, ranging from 0.50 to 0.52 mg/L (**Appendix F**). There has been more variability in sulfate concentrations at MW-11 which could be associated with surface water interactions with the weathered Lewis Shale. Sulfate concentrations at MW-11 in May and November 2023 were 60,000 and 7,900 mg/L, respectively, but the maximum sulfate concentration observed at the well was 140,000 mg/L in November 2021 (**Appendix F**).

At this time, elevated cobalt concentrations at MW-11 and MW-16 do not appear to be associated with a release from the DFADA but continued monitoring and additional investigation is warranted to ensure the CCR monitoring system at the DFADA is operating as designed.

4.3 INTERIM RESPONSE MEASURES

While remedy selection progressed during the reporting period (Section 4.4), APS implemented several interim response measures at Multiunit 1 and the URS to limit impacts to groundwater. The interim response measures will also help to evaluate the effectiveness of potential remedial technologies. The interim response measures implemented during the reporting period and planned for continued implementation in 2024 are summarized below.

Operation of the Northern Intercept Trench and Southern Intercept Trench. APS currently operates a 7,600-ft long seepage intercept trench system that was installed in two interconnected sections (the Northern Intercept Trench [NIT] and the SIT) along the western boundary of the Site lease boundary. The purpose of the intercept trench system is to intercept and collect seepage from the closed and existing CCR units as it flows westward towards Chaco Wash, thus preventing any potential groundwater contamination from impacting the wash (Wood, 2019b). The NIT was constructed and placed into service in 2011 and the SIT was constructed and placed into service in 2013. The trench system replaced an extraction well system that was assessed as ineffective. The extraction well system has not been fully decommissioned but does not contribute appreciable amounts of extracted groundwater to seepage collected system operations. In 2021, two new extraction wells were added to seepage collection system operations upgradient of the NIT (MW-82S and EW-17); only EW-17 remained operable in 2023.

In 2023, 2.3 million gallons were pumped from the NIT with a daily average of 6,332 gallons per day (gpd) and 11.4 million gallons were pumped from the SIT for a daily average of 31,272 gpd.

The estimated COC mass removed from the groundwater by these systems in 2023 is based on the totalized annual flow extracted in intercept trench operations and average constituent concentrations measured at each associated sump. There is currently flow metering equipment available to estimate flow rates at the NIT Seepage collection systems (i.e., Sump-7, Sump-8, and EW-17) and at the SIT seepage collection systems (i.e., Sump-9, Sump-10, Sump-11, Sump-12, Sump-13, Sump-14-1, Sump-15-1, Sump-16-1, Sump-17, and Sump-18). **Tables 4-1** and **4-2** display the results of the calculation. The total estimated mass removed at the NIT was 0.89 pounds (lbs) and at the SIT was 6.91 lbs for a total removal of 7.80 lbs of cobalt and molybdenum in 2023.

Operation of Extraction Wells at the URS. The URS extraction well system became operational in February 2022, following the installation of pumps, piping, and an electrical control system at URS extraction wells CM-01 and CM-02.

Approximately 736,000 gallons were pumped from the URS extraction wells in 2023 for a daily average of 2,026 gpd. The estimated COC mass removed from the groundwater by these systems is based on the totalized annual extracted flow and the constituent concentration measured at each extraction well during the November 2023 sampling event. The May 2023 fluoride concentrations measured at the URS were not used in performing the fluoride mass calculation due to laboratory issues that resulted in elevated laboratory detection limits greater than the GWPS (see Section 3.1.1). The results of the mass removed calculation are included in **Table 4-3**. The total estimated mass of fluoride removed from wells in the vicinity of the former URS was 25 lbs in 2023. The total mass of fluoride removed during 2023 is approximately 69 lbs less than what was calculated for the 2022 calendar year (94 lbs). The reduction is likely due to the fact that the 2022 calculation was performed using an average of concentrations corresponding to wells surrounding the URS extraction wells (i.e., MW-66, MW-67, MW-68, and MW-69) because samples were not collected from extraction wells CM-01 and CM-02 for fluoride analysis. Detected fluoride concentrations at wells MW-66, MW-67, MW-68, and MW-69 ranged from 3.9 to 16 mg/L in 2022. Observed fluoride concentrations at CM-01 and CM-02 were 3.3 and 4.2 mg/L in 2023. The lower fluoride concentrations observed at CM-01 and CM-02 in 2023 and the higher fluoride concentrations at the surrounding wells (MW-66, MW-67, MW-68, and MW-69) suggest that the calculated 2022 mass overestimated the actual fluoride mass removed in 2022.

4.4 PROGRESS ON REMEDY SELECTION FOR MULTIUNIT 1 AND THE URS

In response to GWPS exceedances at Multiunit 1 and the URS and pursuant to 40 CFR §257.96(a), an Assessment of Corrective Measures (ACM) was prepared in 2019 (Wood, 2019c) to evaluate the performance of several combined corrective measures to address groundwater impacts resulting from Multiunit 1 and the URS. Since completing the ACM, various evaluations and pre-design studies necessary to support the selection and design of remedies for Multiunit 1 and the URS have been conducted (Wood, 2020b; Wood, 2021).

4.4.1 CORRECTIVE MEASURES PRE-DESIGN STUDIES

Evaluations and pre-design studies completed during the 2023 reporting period are described below.

Continued Additional Monitoring at Multiunit 1. An expanded list of supplementary wells and constituents across the Site were monitored during the reporting period. The water quality data from these wells helps to refine the delineation of elevated concentrations of cobalt and molybdenum in groundwater downgradient of Multiunit 1 and the SIT. Spatially and temporally heterogeneous concentrations of cobalt and molybdenum around the Multiunit 1 are discussed in Section 4.2 and supported with updated plume maps (**Figures 4-1** through **4-4**).

Transducers were installed in wells upgradient and downgradient of SIT to record water level changes in the area at a greater frequency than twice a year. Water level data collected from wells located downgradient of the SIT are compared to the water level data collected from wells located upgradient of the SIT to evaluate the performance of the SIT in collecting seepage migrating downgradient from the Multiunit 1. Wells equipped with transducers to monitor water levels are identified in **Table 1-2** and hydrographs of the groundwater elevations recorded at these locations is included in **Appendix H**. Water levels in wells upgradient of the SIT are 10 to 30 ft higher than water levels at wells downgradient of the SIT, which suggests the SIT is performing as designed and preventing contaminated groundwater from migrating toward downgradient receptors such as the Chaco Wash.

Data collected from the flow monitoring station installed within Chaco Wash is compared to water levels downgradient of the SIT to evaluate the relationship between water in the Chaco Wash and groundwater located downgradient of the SIT. Water levels in Chaco Wash measured in 2023 were higher than water levels in several adjacent wells. The water levels support the CSM and indicate that Chaco Wash is a losing reach along the Site boundary during select periods of the year and that surface water infiltration could influence groundwater quality in these wells.

Groundwater Model Update at the URS. The groundwater model previously completed for the URS (Wood, 2019a) was reviewed and an update of the model conditions was completed to reflect current interim response measures at the URS (**Appendix I**). The updated groundwater model was calibrated with data collected through November 2022 and a second transient predictive flow and transport run was conducted to forecast the fate and migration of the fluoride plume based on operation of the current extraction system. The additional extraction wells drilled in December 2023 (Section 1.2.2) were included in the predictive forecast at a pumping rate of 1 gpm and 2 gpm each. The model predicts that operating these additional extraction wells will lead to an expanded capture zone and could potentially dry up portions of the near surface groundwater system under the URS in an expedited timeframe when compared to the current extraction system.

Exposure Assessment and Risk Evaluation at Multiunit 1 and the URS. During the 2023 reporting period, APS initiated an evaluation of human health and environmental risk associated with URS and Multiunit 1 COCs at levels above the GWPS to support an assessment of remedy protectiveness. A site-specific conceptual exposure model and step wise risk screening analysis will be developed and recommendations will be presented in a technical memorandum in 2024.

4.4.2 REMEDY SELECTION REPORTS FOR MULTIUNIT 1 AND THE URS

During the reporting period, APS further progressed selection of remedies for Multiunit 1 and the URS that meet the requirements of 40 CFR §257.97(b) while considering the evaluation factors of 40 CFR § 257.97(c). Preparation of a remedy selection report began in 2023 and is planned to be completed in 2024.

4.4.3 SEMI-ANNUAL PROGRESS REPORT ON REMEDY SELECTION FOR MULTIUNIT 1 AND THE URS

40 CFR §257.97(a) requires the preparation of semi-annual reports which document the progress of remedy selection for CCR units that have potentially impacted groundwater until the remedy is selected. Accordingly, a semi-annual report was prepared during the reporting period on July 15, 2023 which describes the progress of remedy selection for Multiunit 1 and the URS. This semi-annual report is included as **Appendix J**.

This Annual Report for 2023 fulfills the requirements of 40 CFR §257.97(a) for a subsequent semi-annual progress report corresponding to the second half of 2023 by providing updates on remedy selection for Multiunit 1 and the URS (Section 4). Future planned activities related to remedy selection for Multiunit 1 and the URS are documented in Section 5.

4.5 CCR UNIT CLOSURE ACTIVITIES

During the reporting period APS progressed CCR unit closure activities as outlined in the following sections.

4.5.1 URS CLOSURE

As documented in previous annual reports, APS provided notice of its intent to close the URS on December 10, 2018, pursuant to 40 CFR §257.101(a)(1) and §257.101(b)(1). The unit is currently in the closure process per the unit's closure plan (AECOM, 2016) which states the URS will be closed by removal. The URS has been demolished and both CCR and visually impacted soil underlying the unit were removed as of December 14, 2018. A new concrete tank (referred to as the URT) was constructed to serve the function of the URS and was placed in service on December 10, 2018. In accordance with 40 CFR §257.102(c), closure of the URS will not be complete until concentrations of fluoride in groundwater downgradient of the unit decline to less than the GWPS for the constituent. Interim response measures (Section 4.3) have been implemented to address elevated concentrations of fluoride in the vicinity of the former URS while a formal remedy selection process progresses. The SDAWP

update prepared during the 2022 reporting period specifically addresses unit closure statistical evaluation procedure to be used once concentrations decline to a level supporting analysis.

4.5.2 CWTP CLOSURE

APS provided notice of its intent to close the CWTP on November 23, 2020, pursuant to 40 CFR §257.101(a)(1) and §257.101(b)(1). The unit had not triggered corrective action and was in detection monitoring at the time discharges to the unit ceased; however, the unit transitioned into assessment monitoring in April 2023. Upon suspension of discharges to the CWTP, flows were directed to a new sedimentation tank system constructed to serve the function of the CWTP (i.e., treatment of ash-impacted wastewater).

The CWTP is being closed in accordance with its closure plan (AECOM, 2016) which includes closure by removal of CCR solids through mechanical excavation and hydraulic dredging. APS issued a contract to the dredging contractor in January 2022. After mobilizing to the Site in August 2022, the contractor performed detailed surveys of the unit and conducted a drilling program to verify the extent of material to be dredged. After incorporation of the information into a detailed computer model that interfaces with Site equipment, dredging began in early December 2022 and continued throughout most of the reporting period. It is anticipated that closure activities will continue into Q1 of 2024.

4.5.3 MULTIUNIT 1 CLOSURE

APS provided notice of its intent to close the LAI/LDWP (Multiunit 1) on April 10, 2021, pursuant to 40 CFR §257.101(a)(1). Discharges to the LAI (principally flue gas desulfurization (FGD) waste) were suspended at that time and have since been blended with ash and placed in the DFADA.

The closure plans for the LAI (AECOM, 2016) and LDWP (AECOM, 2016) state that CCR in these units will be closed in place and capped with an evapotranspiration cover. Dewatering of the units must occur prior to capping to safely construct the final cover system. During the reporting period, geotechnical assessment of the deposits in the LAI continued to support cover system design with placement of lightweight aggregate material in multiple test roads. The test roads have been constructed on the LAI surface to provide access for the installation of new dewatering and observation wells into the CCR above the liner. A pilot dewatering well study was completed in July 2023. Declining surface water levels in the LDWP indicate that flows into the LDWP from the LAI have significantly decreased; ponded water occurred in less than a quarter of the LDWP footprint as of the end of 2023.

Planned activities for 2024 include continuing to construct access roads onto the LAI and install more extraction wells, completion of cover system design, rerouting of LAI discharges (i.e., decant tower and toe drain seepage) from the LDWP to the RWP, and initiation of stormwater improvements supporting unit closure.

5 KEY ACTIVITIES FOR THE UPCOMING YEAR

During 2024, the following key activities will likely be conducted to support CCR groundwater monitoring and corrective action compliance at the Site:

- *Preparation of an Annual Groundwater Monitoring and Corrective Action Report for 2024* – Per 40 CFR §257.90€, an annual report must be prepared no later than January 31 of the year following the calendar year documented in the report.
- *Continued Detection Monitoring at the DFADA and RWP with Evaluation for SSIs Over Background* – Per 40 CFR §257.94(b), detection monitoring (including analysis of collected samples for Appendix III constituents) must continue on a semi-annual basis. On an ongoing basis, it will be determined whether there has been an SSI over background at the CCR units undergoing detection monitoring within 90 days of sampling and analysis (40 CFR §257.93[h][2]).
- *Initiation of Assessment Monitoring for CCR Units with an SSI over Background (as applicable)* – Per 40 CFR §257.94(e)(1), within 90 days of detecting an SSI over background levels for any Appendix III constituent, an assessment monitoring program must be established.
- *Continued Assessment Monitoring at CWTP, Multiunit 1, and the URS* – While corrective action evaluation progresses, assessment monitoring (including analysis of collected samples for Appendix III and Appendix IV constituents) must be conducted on a semi-annual basis at the Multiunit 1 and the URS per 40 CFR §257.95(b) and (d)(1). At the CWTP, assessment monitoring must be conducted for as long as concentrations of Appendix III constituents exceed background values per 40 CFR §257.95(f) and remain in assessment monitoring until criteria under §257.95(e) of the CCR Rule are met (Federal Register, 2020) or closure of the unit occurs.
- *Preparation of a Well Completion Report for the new URS wells installed in December 2023* – The report will document field activities, borehole advancement, and the well installation of two extraction wells and two monitoring wells at the URS.
- *Method 9056A Sample Analysis Technical Memorandum* – A technical memorandum will be prepared in 2024 that compares the results of the analysis of select groundwater samples for fluoride by both USEPA Method 9056A and EPA Method 300.0 during the November 2023 sampling event.
- *Evaluate Obstruction at MW-87 and Regaining Access* - Roots and plant matter have been identified at MW-87 and are likely associated with roots or plant matter that have migrated through the well screen into the interior of the well casing causing an obstruction. Efforts to clear the obstruction are planned to take place in 2024.
- *Continued Dredging of the CWTP* –Hydraulic dredging began in December 2022 as part of closure activities and is planned to continue into 2024. Groundwater monitoring will continue through the closure process.
- *LAI and LDWP Closure Activities* – Closure activities for 2024 include continuing construction of access roads onto the LAI, the installation of more extraction wells, completion of cover system design, rerouting of LAI discharges (i.e., decant tower and toe drain seepage) from the LDWP to the RWP, and initiation of stormwater improvements supporting unit closure.
- *Preparation of Remedy Selection Report* – APS will select remedies for Multiunit 1 and the URS that meet the requirements of 40 CFR §257.97(b) and document the selection process in a remedy selection report prepared for each unit per 40 CFR §257.97(a).
- *Initiation of Remedial Activities* – Per 40 CFR §257.91(f), remedial activities at Multiunit 1 and the URS will begin within 90 days of selecting a remedy for each unit.

Since the CCR Rule is implemented in phases based on analysis of data collected during the groundwater monitoring program, the foregoing list is subject to change and only includes reasonably probable activities that will occur in 2024; the list is not comprehensive.

TABLES

Table 1-1

Description of Coal Combustion Residuals Units

CCR Unit	Location	Function	Operation	Size/Construction	History
Upper Retention Sump (URS) *Closure Initiated*	*Plant Area* NW 1/4 of Section 36, T29N, R16W	*Single CCR unit* . Impoundment. Surge pond for FGD system.	FGD system discharge was discharged into the sump via 10 plus controlled/monitored lines. Pond contents were recirculated back into the FGD process via a pump chamber located on the south end of the pond. Solids were periodically removed from the sump.	- 1.07 acres in areal extent - Soil-cement liner on bottom and inside slopes	Placed in service around 1983. Discharges to the unit ceased as of December 10, 2018 and were thereafter directed to a new concrete tank (i.e., the Upper Retention Tank) that is located within the former footprint of the URS and serves the function of the former unit. Closure activities conducted in 2018 included removal of CCR and associated impacted materials from the URS with placement in the DFADA prior to backfilling the area with clean fill.
Combined Waste Treatment Pond (CWTP) *Closure Initiated*	*East of Plant, Adjacent to Morgan Lake* SE 1/4 of Section 25, T29N, R16W	*Single CCR Unit* . Impoundment. Detention pond used for NPDES treatment; settling and stabilization basin for ash-impacted and other Plant wastewater flows prior to discharge to Morgan Lake in accordance with an NPDES permit.	The primary source of water to the CWTP was from hydrobins which separated transport water from bottom ash generated in plant Units 4 and 5. Seven earthen basins in the western edge of the CWTP promoted sediment settling prior to the water decanting into the main portion of the CWTP and then overflowing into the cooling water discharge canal at the northeast corner of the pond.	- 13.4 acres in areal extent	Constructed in 1978. Discharges to the unit ceased as of November 23, 2020 and were thereafter directed to a new concrete tank (i.e., the Bottom Ash Sluice Water Recycle Tank) that is located northeast of the coal storage area. CCR removal from the unit was initiated in 2022.
Lined Ash Impoundment (LAI) *Closure Initiated*	*Disposal Area* E 1/2 of Section 34, T29N, R16W	*Part of a CCR multiunit with the LDWP* that received fly ash, flue gas desulfurization (FGD) waste and associated residuals as a slurry from the plant.	Waste was discharged into the pond in the northeast portion of the pond. Decanted flow discharged via a vertical drop inlet structure and through a toe drain into the LDWP.	- 126.8 acres in areal extent (high water line) - 60 mil HDPE liner - 5,364 acre-ft design capacity - 5,275.2 ft AMSL maximum working level	Constructed on top of closed Ash Ponds 4 and 5 and placed in service in 2004. Discharges to the unit ceased as of April 10, 2021 and were thereafter blended with dry fly ash and placed in the DFADA.
Lined Decant Water Pond (LDWP) *Closure Initiated*	*Disposal Area* E 1/2 of Section 34, T29N, R16W	*Part of a CCR multiunit with the LAI* that received decanted water from the LAI. Impoundment.	Decanted water was discharged into the pond from the LAI via gravity; the water was pumped from the LDWP back to the plant for reuse in operations.	- 45 acres in areal extent - Two 60 mil HDPE liners separated by a leak detection layer - 435 acre-ft design capacity - 5,213.2 ft AMSL maximum working level	Constructed on top of closed Ash Pond 3 and placed in service in 2004. Notice of intent to close provided on April 10, 2021.
Dry Fly Ash Disposal Area (DFADA) *Receiving CCR*	*Disposal Area* SE 1/4 of Section 34, T29N, R16W	*Single CCR unit* . Landfill. Disposal of dry fly ash, bottom ash, FGD (blended with CCR solids), and construction debris.	The DFADA is filled in general accordance with a stacking plan. Leachate generated from the DFADA cells is pumped into trucks and used for dust control.	- 4 conjoined cells (DFADA 1, 2, 3 and 4) with an areal extent of 137.7 acres total - 8,028 acre-ft design capacity - DFADA 1: compacted clay overlain by 60 mil HDPE liner and drainage layer - DFADA 2, 3 and 4: geosynthetic clay liner overlain by 60 mil HDPE liner and drainage layer - Leachate collection system drains each DFADA cell	Constructed in 2007 (DFADA 1), 2012 (DFADA 2), 2014 (DFADA 3) and 2021 (DFADA 4).

Table 1-1

Description of Coal Combustion Residuals Units

CCR Unit	Location	Function	Operation	Size/Construction	History
Return Water Pond (RWP) *Receiving CCR*	*Plant Area* NW 1/4 of Section 36, T29N, R16W	*Single CCR unit.* Lined impoundment for the temporary storage of FGD system waste, drain down from the LAI, treated sewage wastewater flow, and water pumped from the site seepage collection system.	The RWP consists of two cells; FGD system waste generated at the plant can be discharged into an FGD cell while all other liquids are discharged into a liquid cell. A spillway between the two cells allows liquid in the FGD system waste to decant into the liquid cell. Liquids from the liquid cell are pumped back to the plant for reuse in plant operations.	- 5.1 acres in areal extent - Composite liner system and associated LCRS comprised of a primary 60 mil HDPE liner, a geosynthetic drainage layer, a secondary 60 mil HDPE liner, and an underlying geosynthetic clay liner - 38.6 acre-ft design capacity - 5379 ft AMSL maximum working level	Constructed in 2019 and placed into service November 2020.

Abbreviations:

AMSL - above mean sea level
CCR - Coal combustion residuals
CWTP - Combined Waste Treatment Pond
DFADA - Dry Fly Ash Disposal Area
FGD - flue gas desulfurization
ft - feet
HDPE - high density polyethylene
LAI - Lined Ash Impoundment
LCRS - leak collection and removal system
LDWP - Lined Decant Water Pond
NPDES - National Pollutant Discharge Elimination System
RWP - Return Water Pond
URS - Upper Retention Sump

Notes and Abbreviations:

Source of presented information is AECOM, 2017 and Sakura Engineering & Surveying, 2017, 2019, and 2020.

Vertical datum is NAVD 88

[1] - Water level monitored via transdcuer

[2] - Estimated

[3] - New surveyed elevation after wellhead modifications

[4] - Well has not been surveyed as of January 31, 2024

[5] - MW-34 is also designated EW-34 on previous reports

Wells highlighted gray were abandoned

AMSL - Above mean sea level

bgs - below ground surface

CCR - coal combustion residual(s)

CWTP - Combined Waste Treatment Pond

DFADA - Dry Fly Ash Disposal Area

ft - feet

NA - Data Not Available

NM - Not Measured as of January 31, 2024

RWP - Return Water Pond

URS - Upper Retention Sump

Well Designation Descriptions:

Background - Monitoring location used to determine background groundwater quality that has not been affected by the CCR unit under investigation (40 CFR §257.91)

Downgradient - Monitoring location used to evaluate the nature and extent of groundwater conditions associated with each CCR unit

Downgradient Boundary - Monitoring location used to assess the groundwater conditions at the boundary of each CCR unit

Extraction - Well location that currently supports the hydraulic containment system with the extraction of groundwater located downgradient of a CCR unit

Extraction (Inactive) - Well location installed to assist with the extraction of groundwater that does not actively support the current hydraulic containment system

Supplementary - Monitoring location intended to further support interpretations of both immediate CCR Unit-area conditions and Site-wide conditions

Notes:

[1] Units are standard units

[2] Units are picocuries per liter

[3] BTVs identified for the DFADA used background wells, MW-49A and MW-74, as presented in the CCR Monitoring Well Network Report and Certification (AECOM, 2017)

Abbreviations:

BTV - Background Threshold Value

CWTP - Combined Waste Treatment Pond

GWPS - Groundwater Protection Standard

LPL - lower prediction limit

mg/L - milligrams per liter

N/A - not applicable RL - reporting limit

UPL - upper prediction limit URS - Upper Retention Sump

Notes:

[(a)] Background wells for the CWTP, RWP, and URS.

[(b)] Totals exclude field duplicate samples.

X - Well Monitored

--- - Well Not Monitored

[1]Well contained no groundwater and was measured dry during the sampling event

[2]Well was abandoned in June 2023

[3]Well installed in June 2023

[4]Well was not configured for sampling

[5]Well contained an insufficient amount of groundwater to support sample collection

[6]Obstruction present in the well prevented sample collection

Abbreviations:

App - Appendix

CCR - coal combustion residuals

CWTP - Combined Waste Treatment Pond

DFADA - Dry Fly Ash Disposal Area

RWP - Return Water Pond

URS - Upper Retention Sump

Monitoring Point Type Descriptions:

Background - Monitoring location used to determine background groundwater quality that has not been affected by the CCR unit under investigation (40 CFR §257.91)

Downgradient - Monitoring location used to evaluate the nature and extent of groundwater conditions associated with each CCR unit

Downgradient Boundary - Monitoring location used to assess the groundwater conditions at the boundary of each CCR unit

Extraction - Well location that currently supports the hydraulic containment system with the extraction of groundwater located downgradient of a CCR unit

Extraction (Inactive) - Well location installed to assist with the extraction of groundwater that does not actively support the current hydraulic containment system

Supplementary - Monitoring location intended to further support interpretations of both immediate CCR Unit-area conditions and Site-wide conditions

Surface Water - Sample collected from a surface water body that is monitored to provide information for overall Site conditions

Table 3-3

Aquifer Properties and Groundwater Flow Calculations

Hydrogeologic Unit (CCR Unit)	Estimated Hydraulic Conductivity [ft/d]	Estimated Effective Porosity [Vol/Vol]	Sampling Event	Calculated Hydraulic Gradient [ft/ft]	Calculated Groundwater Flow Direction [degrees from North]	Estimated Groundwater Flow Rate [ft/d]

1 INTRODUCTION

Montgomery & Associates (M&A) has prepared this report to summarize well construction, repair, and modification activities conducted from June 20 to June 27, 2023, at the Arizona Public Service (APS) Four Corners Generating Station (FCGS) in Fruitland, New Mexico.

In 2022, Daniel B. Stevens, a Geo-logic Company, evaluated 31 extraction and monitor wells at the FCGS site to determine their efficacy based on available hydrogeologic and well data. WSP USA Environment & Infrastructure, Inc. (WSP) reviewed their findings and recommended that wells either be replaced, abandoned, modified, or repaired. WSP provided recommendations to address each well in a technical memorandum dated January 27, 2023 (WSP, 2023).

Based on the recommendations provided by WSP, APS contracted M&A to provide direction and oversight for drilling and construction of 3 new extraction wells and 1 new monitor well to replace existing wells, for repair of 2 existing monitor wells, and for modification of 3 existing extraction wells for use as monitor wells. APS contracted directly with Cascade Drilling for the well construction, repair, and modification work. The well locations are shown on Figure 1.

Figure 1. Site Map

2 WELL CONSTRUCTION ACTIVITIES

Three new extraction wells and 1 new monitor well were drilled and constructed at the FCGS from June 20 to 27, 2023. The boreholes for the new wells were advanced using sonic drilling methods by Cascade Drilling. Sonic drilling enabled retrieval of a relatively intact core of drill cuttings, which facilitated detailed visual inspection of the lithology.

All drilling and well construction activities were directed in the field by a qualified M&A hydrogeologist. During drilling operations, the on-site M&A hydrogeologist maintained lithologic logs of the subsurface materials encountered and notes regarding drilling characteristics.

2.1 Extraction Well Drilling and Construction

Extraction wells EW-11R, EW-12R, and DMX-5R were installed to replace abandoned wells EW-11, EW-12, and DMX-5, respectively. New well locations are shown on Figure 1. Prior to drilling, hydrovac excavation was conducted at the 3 locations from land surface to approximately 5 feet below land surface (bls) to confirm no subsurface utilities were present. At each location, a nominal 10-inch diameter borehole was advanced into competent Lewis Shale formation to accommodate construction of a 6-inch diameter well screened above unweathered shale.

Construction details for extraction wells EW-11R, EW-12R, and DMX-5R are summarized in Table 1. Borehole lithologic logs and well schematics for new extraction wells are provided in Appendix A. Hydrographs showing water level data and pumping rates recorded during well development and testing activities are provided in Appendix B. Drilling, construction, and testing activities completed at each location are summarized in the following sections.

Table 1. Construction Details for Replacement Extraction Wells

Well ID	Borehole Depth (ft bls)	Borehole Diameter (inches)	Well Casing Diameter (inches)	Well Casing Material	Screened Interval (ft bls)	Static Water Level (ft bls)	Approximate Sustainable Pumping Rate (gpm)
EW-11R	43	10	6	Sch 80 PVC	11.5 – 41.5	29.48	<1
EW-12R	37.5	10	6	Sch 80 PVC	12.5 – 37.5	17.48	1
DMX-5R	55	10	6	Sch 80 PVC	20 - 55	35.51	<1

ft bls – feet below land surface
gpm – gallons per minute

2.1.1 EW-11R

The EW-11R borehole was advanced to a total depth of 43 feet bls. Light brown to brownish gray sandy silty clay with moderate to high plasticity was encountered from land surface to 15 feet bls. Light brown to brown silty clay with trace sand and gravel was encountered from 15 to 29 feet bgs, underlain by highly weathered, poorly to moderately lithified, grayish brown shale from 29 to 35 feet bgs. Unweathered, moderately to highly lithified gray shale was encountered at 35 feet bls. The borehole was advanced approximately 8 feet into the competent shale to confirm the contact. Evidence of groundwater was not observed during drilling. The lithologic log and well construction schematic for EW-11R are provided on Figure A-1 (Appendix A).

EW-11R was constructed of 6-inch diameter, schedule 80, flush-threaded PVC blank casing, machine-slotted well screen with 0.020 inch slots, and a threaded end cap. EW-11R was screened from 11.5 to 41.5 feet bls. From bottom to top, the EW-11R annular space was filled with No. 12-20 mesh silica sand filter pack from total depth to 1.5 feet above the screened interval, a 2-foot layer of No. 20-40 mesh transition sand, a 2-foot layer of hydrated bentonite chips, and a cement-bentonite grout seal to land surface. The well was completed with a 10-inch diameter steel lockable security monument anchored in concrete (Figure 2). The monument extends from 2 feet bls to 3 feet above land surface. On June 26, 2023 (3 days after construction), the water level stabilized at 29.48 feet bls.

Figure 2. EW-11R Surface Completion

Following construction, EW-11R was developed by swabbing, bailing, and pumping methods. The screened interval was swabbed with a single-flanged swab tool for approximately 20 minutes and settled solids were removed by bailing. After bailing, a submersible pump was installed and the well was pumped at rates from 1 to 2 gpm. EW-11R was equipped with a data logging pressure transducer to monitor water level drawdown and recovery during pumping cycles. Water level data and pumping rates recorded during development are presented on Figure B-1 (Appendix B).

During the first development pumping cycle, EW-11R drew down completely after 12 minutes at a rate of 1.5 gpm. After 22 hours, the well recovered to approximately 70% of the original static water level. During subsequent pumping cycles, the well continued to draw down completely at a pumping rate of 1 gpm. Development activities were limited by the sustainable pumping rate (less than 1 gpm) and slow recovery rate. Additional well testing was not feasible.

During development activities, the well produced little to no sand. The lowest turbidity was recorded at 64 nephelometric turbidity units (NTUs); however, turbidity generally increased as the well drew down. During the final pumping cycles, conductivity and pH generally stabilized at approximately 8,300 µS/cm and 7.3, respectively. Water generated during development was disposed at the Ash Pond 3 Pump House.

2.1.2 EW-12R

The EW-12R borehole was advanced to a total depth of 37.5 feet bls. Light brown to brown sandy silty clay with moderate plasticity and sparse gypsum was encountered from land surface to 8 feet bls. Yellowish brown clayey sandy silt with moderate plasticity and some yellow staining was encountered from 8 to 25 feet bls. From 25 to 30 feet bls, moderately weathered, moderately lithified, dark grayish brown shale with red staining was encountered. Unweathered, moderately to highly lithified gray shale was encountered at 30 feet bls. The borehole was advanced approximately 7.5 feet into the competent shale to confirm the contact. During drilling, water was encountered at approximately 18 feet bls. The lithologic log and well construction schematic for EW-12R are provided on Figure A-2 (Appendix A).

EW-12R was constructed of 6-inch diameter, schedule 80, flush-threaded PVC blank casing, machine-slotted well screen with 0.020 inch slots, and a threaded end cap. EW-12R was screened from 12.5 to 37.5 feet bls. From bottom to top, the EW-12R annular space was filled with No. 12-20 mesh silica sand filter pack from total depth to 2.5 feet above the screened interval, a 2-foot layer of No. 20-40 mesh transition sand, a 2-foot layer of hydrated bentonite chips, and a cement-bentonite grout seal to land surface. The well was completed with a 10-inch diameter steel lockable security monument anchored in concrete (Figure 3). The monument

extends from 2 feet bls to 3 feet above land surface. On June 26, 2023 (2 days after construction), the water level stabilized at 17.48 feet bls.

Figure 3. EW-12R Surface Completion

Following construction, EW-12R was developed by swabbing, bailing, and pumping methods. The screened interval was swabbed with a single-flanged swab tool for approximately 25 minutes and settled solids were removed by bailing. After bailing, a submersible pump was installed and the well was pumped at rates from 2 to 3 gpm. EW-12R was equipped with a data logging pressure transducer to monitor water level drawdown and recovery during development pumping cycles. Water level data and pumping rates recorded during development are presented on Figure B-2 (Appendix B).

During development activities, the well produced little to no sand. The lowest turbidity was recorded at 44 NTUs; however, turbidity generally increased as the well drew down. Conductivity generally stabilized at approximately 9,300 µS/c; pH stabilized at 7.3. Water generated during development was transported to the Ash Pond 3 Pump House.

During development, EW-12R drew down completely within 1 hour at a pumping rate of 3 gpm. The well recovered to 95% of the original static water level within 15 minutes. Based on water level data, a step-rate pumping test was conducted on June 28 at pumping rates of 0.4, 1, and 2 gpm. Water level data and pumping rates recorded during step testing are presented on Figure B-3 (Appendix B). Step test results are summarized in Table 2.

Table 2. Summary of EW-12R Step Test Results

Step	Step Length (minutes)	Pumping Rate (gpm)	Drawdown (feet)	Specific Capacity (gpm/ft)
1	60	0.4	0.53	0.75
2	60	1	1.68	0.60
3	105	2	>7	<0.29

gpm/ft – Gallons per minute per foot

At pumping rates of 0.4 gpm (Step 1) and 1 gpm (Step 2), the water level in the well stabilized within 5 and 15 minutes, respectively. At a pumping rate of 2 gpm (Step 3), the water level did not stabilize after 105 minutes of pumping, and the rate of drawdown appeared to increase slightly near the end of the pumping period (Figure B-3). During step testing, conductivity and pH levels were consistent with those observed during development. Turbidity was measured at 1.82 NTUs during the first step but increased significantly when the pumping rate and drawdown increased.

2.1.3 DMX-5R

The DMX-5R borehole was advanced to a total depth of 55 feet bls. Light brown to brown sandy clay with moderate to high plasticity was encountered from land surface to 14 feet bls. Light brown silty sand was encountered from 14 to 35 feet bls, underlain by brown sandy clay from 35 to 37 feet bls. Moderately weathered, moderately lithified, yellowish brown to grayish brown shale was encountered from 37 to 50 feet bls. Unweathered, moderately lithified gray shale was encountered at 50 feet. The borehole was advanced approximately 5 feet into the competent shale to confirm the contact. During drilling, evidence of groundwater was observed in drilling cuttings at approximately 34 feet bls. The lithologic log and well construction schematic for DMX-5R are provided on Figure A-3 (Appendix A).

DMX-5R was constructed of 6-inch diameter, schedule 80, flush-threaded PVC blank casing, machine-slotted well screen with 0.020 inch slots, and a threaded end cap. DMX-5R was screened from 20 to 55 feet bls. From bottom to top, the DMX-5R annular space was filled with No. 12-20 mesh silica sand filter pack from total depth to 2 feet above the screened interval, a 2-foot layer of No. 20-40 mesh transition sand, a 2.5-foot layer of hydrated bentonite chips, and a cement-bentonite grout seal to land surface. The well was completed with a 10-inch diameter steel lockable security monument anchored in concrete (Figure 4). The monument extends from 2 feet bls to 3 feet above land surface. On June 27, 2023 (2 days after construction), the water level stabilized at 35.51 feet bls.

Figure 4. DMX-5R Surface Completion

Following construction, DMX-5R was developed by swabbing, bailing, and pumping methods. The screened interval was swabbed with a single-flanged swab tool for approximately 20 minutes and settled solids were removed by bailing. After bailing, a submersible pump was installed and the well was pumped at rates from 0.5 to 3 gpm. DMX-5R was equipped with a data logging pressure transducer to monitor water level drawdown and recovery during pumping cycles. Water level data and pumping rates recorded during development are presented on Figure B-4 (Appendix B).

During the first development pumping cycle, DMX-5R drew down completely within 15 minutes at a rate of 3 gpm and recovered to approximately 95% of the original static water level within 9 hours. During subsequent pumping cycles, the well drew down completely at a pumping rate of 1 gpm. Development activities were limited by the sustainable pumping rate (less than 1 gpm) and slow recovery rate. Additional well testing was not feasible.

During development activities, the well produced little to no sand. The lowest turbidity was recorded at 32 NTUs; however, turbidity generally increased as the well drew down. During the

final pumping cycles, conductivity and pH generally stabilized at approximately 7,800 µS/cm and 7.0, respectively. Water generated during development was disposed at the Ash Pond 3 Pump House.

2.2 Monitor Well Drilling and Construction

Monitor well MW-6R was installed to replace abandoned well MW-6. Borehole MW-21R was drilled for potential replacement of MW-21. However, the MW-21R borehole was not completed as a well and was abandoned. Drilling locations are shown on Figure 1. Prior to drilling, hydrovac excavation was conducted at the 2 locations to approximately 5 feet bls to confirm no subsurface utilities were present. At each location, a nominal 8-inch diameter borehole was advanced into competent Lewis Shale formation to accommodate potential construction of a 4-inch diameter well screened above unweathered shale.

Borehole and construction details for monitor well MW-6R and borehole MW-21R are summarized in Table 3. Borehole lithologic logs for the 2 drilling locations and the well schematic for MW-6R are provided in Appendix A. Drilling and construction activities completed at each location are summarized in the following sections.

Table 3. Construction Details for Replacement Monitor Wells

Well ID	Borehole Depth (ft bls)	Borehole Diameter (inches)	Well Casing Diameter (inches)	Well Casing Material	Screened Interval (ft bls)	Static Water Level (ft bls)
MW-6R	46	8	4	Sch 80 PVC	25-40	39.17
MW-21R	35	8	---	---	---	---

ft bgs – feet below ground surface

2.2.1 MW-6R

The MW-6R borehole was advanced to a total depth of 46 feet bls. Brown sandy silty clay was encountered from land surface to about 4 feet bls. Weathered shale was encountered from 4 to 34 feet bls; the degree of weathering decreased and the color transitioned from brown to gray with depth. Unweathered, moderately to highly lithified gray shale was encountered at 34 feet bls. The borehole was advanced approximately 12 feet into the competent shale to confirm the contact. Evidence of groundwater was not observed during drilling. The lithologic log and well construction schematic for MW-6R are provided on Figure A-4 (Appendix A).

MW-6R was constructed of 4-inch diameter, schedule 80, flush-threaded PVC blank casing, machine-slotted well screen with 0.020 inch slots, and a threaded end cap. MW6-R was screened

from 25 to 40 feet bls. Prior to setting the screen, the lower portion of the borehole was backfilled with bentonite chips from 41 to 46 feet bls. From bottom to top, the MW-6R annular space was filled with No. 12-20 mesh silica sand filter pack from 41 feet bls to 2 feet above the screened interval, a 2-foot layer of No. 20-40 mesh transition sand, a 2-foot layer of hydrated bentonite chips, and a cement-bentonite grout seal to land surface. The well was completed with an 8-inch diameter steel lockable security monument anchored in concrete (Figure 5). The monument extends from 2 feet bls to 3 feet above land surface.

Figure 5. MW-6R Surface Completion

Approximately 24 hours after construction, the water level in MW-6R was measured at 33.39 feet bls. The well was bailed dry and monitored for recovery. After 24 hours, the water level in the well stabilized at 39.17 feet bls. MW-6R development was not feasible due to the minimal saturated thickness in the well. After bailing activities, the pressure transducer and bladder pump formerly located in abandoned well MW-6 were placed in MW-6R.

2.2.2 MW-21R

The MW-21R borehole was advanced to a total depth of 35 feet bls. Brown sandy silty clay was encountered from land surface to about 4 feet bls. Weathered shale was encountered from 4 to

25 feet bls; the degree of weathering decreased, and the color transitioned from brown to gray with depth. Unweathered, moderately to highly lithified gray shale was encountered at 25 feet bls. The borehole was advanced approximately 10 feet into the competent shale to confirm the contact. Evidence of groundwater was not observed during drilling.

Construction of a monitor well within the MW-21R borehole was contingent upon the occurrence of groundwater. Once total depth was reached, the borehole was allowed to remain open overnight. After 12 hours, no water had accumulated in the borehole. Based on the dry conditions, the borehole was abandoned. Cement-bentonite grout was placed from total depth to land surface, and the abandoned borehole location was marked with a brass survey marker (Figure 6). The lithologic log and borehole abandonment schematic for MW-21R are provided on Figure A-5 (Appendix A).

Figure 6. MW-21R Borehole Abandonment Completion

3 WELL REPAIR AND MODIFICATION ACTIVITIES

The field program included repair of 2 existing monitor well monuments and modification of 3 existing extraction wells for use as monitor wells.

3.1 Wellhead Repair at Existing Monitor Wells

Based on dry conditions within the MW-21R borehole, APS elected to preserve existing monitor wells MW-21 and MW-22, originally scheduled for abandonment. Monitor wells MW-21 and MW-22 are located approximately 6 and 475 feet east of the MW-21R borehole, respectively (Figure 1). During field activities, depth-to-water in MW-21 was measured at 18.70 feet bls. Depth-to-water in MW-22 was measured at 10.20 feet bls.

At both locations, the deteriorated 6-inch diameter, steel outer protective casing was cut at land surface and the area around the buried portion of the steel casing was excavated to approximately 2 feet bls. The height of the PVC well casings were not altered during repair activities. A new 8-inch diameter steel security monument with locking cap was installed over the existing steel and PVC casing and anchored in concrete. The new security monuments extend from 2 feet bls to 3 feet above land surface (Figure 7 and Figure 8).

Figure 7. MW-21 Surface Completion Repair

Figure 8. MW-22 Surface Completion Repair

3.2 Modification of Existing Extraction Wells to Monitor Wells

Existing extraction wells EW-14, EW-15, and EW-34 (Figure 1) were converted for use as monitor wells. The 3 wells are constructed with 5-diameter PVC casing and screen. At each location, 8-inch diameter steel surface casing extends approximately 1 foot above land surface and terminates with a flanged wellhead connection. At the time of field activities, each well was equipped with a 0.5-horsepower submersible pump, 1 ¼-inch stainless steel column pipe, active electrical control boxes, and a functional pump control box. The wells were equipped with functional wellheads connected to the wellfield pipeline. Before any abandonment work began, APS shut down the power supply to each well site and isolated equipment per APS lockout tagout (LOTO) protocols.

On June 21, 2023, Cascade Drilling removed the submersible pumps and column pipe at each location. The wellheads were dismantled, and pump electrical cables were disconnected at the control boxes. The wellfield pipeline connections were sealed with blind flanges. APS requested that the control boxes remain in place for potential future use. Following pump removal, the wells were secured with a lockable blind flange (Figure 9, Figure 10, and Figure 11).

CCR GROUNDWATER DETECTION MONITORING STATISTICAL ANALYSIS AND RESULTS FOR THE CWTP APPENDIX III CONSTITUENT DATA COLLECTED THROUGH JANUARY 2023

TECHNICAL MEMORANDUM

To:	Arizona Public Service Company	**Project No.**	14-2023-2011
By:	Samantha O'Shea	**Reviewed by:**	Maren Henley, PE
Tel:	602-733-6000	**CC:**	File
Date:	April 10, 2023		

Re: CCR GROUNDWATER DETECTION MONITORING
STATISTICAL ANALYSIS AND RESULTS FOR THE CWTP
APPENDIX III CONSTITUENT DATA COLLECTED THROUGH JANUARY 2023
Arizona Public Service Company Four Corners Power Plant – Fruitland, New Mexico

Please be advised that, effective September 21, 2022, Wood Environment & Infrastructure Solutions, Inc. was acquired by WSP. due to the acquisition, we have changed our name to WSP USA Environment & Infrastructure Inc. no other aspects of our legal entity or capabilities have changed for this report, including our Federal Tax ID which remains 91-1641772. Correspondence for this technical memorandum should continue to be addressed to the individuals listed above.

1.0 INTRODUCTION

This Technical Memorandum presents the results of a statistical evaluation of groundwater monitoring data collected from monitoring wells downgradient of the Combined Waste Treatment Pond (CWTP) located at the Arizona Public Service Company (APS) Four Corners Power Plant (Site) in Fruitland, New Mexico. The statistical evaluation was performed by Geosciences Consulting Strategies, LLC (Geosciences Consulting), a subcontractor to WSP USA Environment and Infrastructure, Inc. (WSP) pursuant to Coal Combustion Residuals (CCR) Rule requirements for groundwater monitoring and corrective action detailed in 40 Code of Federal Regulations Sections 257.90 through 257.98 (CCR Rule) (Federal Register, 2020).

The CWTP is a Site CCR unit that is currently in the detection monitoring program. The CCR Rule requires evaluation on an ongoing semi-annual basis of Appendix III constituent data collected from CWTP downgradient wells to determine if a statistically significant increase (SSI) over background threshold values (BTVs) has occurred. The statistical evaluation documented herein incorporates Appendix III constituent data collected from CWTP downgradient compliance wells MW-62, MW-63, MW-64, and MW-65 and CWTP background wells MW-71, MW-72, and MW-73 during the November 2022 semi-annual sampling event and a January 2023 resampling event.

To address an initial exceedance of the boron and calcium BTV at MW-62 in November 2022, resampling was performed in January 2023. In accordance with the Statistical Data Analysis Workplan (SDAWP) developed for the Site and the US EPA's Unified Guidance (WSP, 2023; USEPA, 2009), resampling of the well was implemented in January 2023. The January 2023 resampling event provided additional evidence that the initial November 2022 exceedances for boron and calcium were statistically significant. Further details of the initial November 2022 exceedances, and statistical findings are presented in Section 2.0 below.

2.0 STATISTICAL EVALUATION RESULTS

Attachment A presents the statistical evaluation performed by Geosciences Consulting. The results of the evaluation are summarized as follows:

- Table 1 of **Attachment A** presents interwell BTVs for the CWTP which were updated in April 2022 pursuant to recommendations in the January 2022 Alternative Source Demonstration (WSP, 2023). Table 2 of Attachment A presents the downgradient sample data summary.
- In November 2022, an initial boron detection of 2.1 milligrams per liter (mg/L) exceeded the boron BTV of 2.0 mg/L at MW-62; this exceedance triggered a 1 of 2 resampling strategy for this constituent and monitoring location. The January 2023 resample resulted in a detection of 2.1 mg/L which exceeded the boron BTV, therefore the initial exceedance is found to be statistically significant and consistent with previous detections at this location.
- In November 2022, an initial calcium detection of 610 mg/L exceeded the boron BTV of 536 mg/L at MW-62; this exceedance triggered a 1 of 2 resampling strategy for this constituent and monitoring location. The January 2023 resample resulted in a detection of 550 mg/L which exceeded the calcium BTV, therefore the initial exceedance is found to be statistically significant and consistent with previous detections at this location.
- The January resampling event at MW-62 indicated an exceedance for pH at a concentration of 7.00 standard units (SU) and did not require resampling based on the November 2022 sample result of 6.75 SU.
- In November 2022, an initial pH concentration of 7.00 standard units (SU) exceeded the pH BTV range of 6.5 to 6.9 mg/L at MW-63. This exceedance triggered a 1 of 2 resampling strategy for this constituent at this monitoring location. The January 2023 resample was not completed but an April resampling confirmed the initial pH concentration of 7.00 SU exceeding the pH BTV range of 6.5 to 6.9 mg/L. Exceedances of pH were comparable to background concentrations at the CWTP and require further statistical review to assure BTVs are representative of groundwater conditions.
- A statistically significant decreasing temporal trend is evident for chloride and TDS at MW-63, boron, calcium, and TDS at MW-64, and boron and TDS at MW-65.
- A statistically significant decreasing temporal trend is becoming apparent for concentrations of boron and sulfate at MW-63
- There is sufficient evidence to declare statistically significant increases (SSI) in concentrations of boron and calcium over their respective BTVs at MW-62 using the 1 of 2 resampling strategy (**Attachment A**).

3.0 RECOMMENDATIONS

Based on the statistical evaluation presented in **Attachment A** and pursuant to the CCR Rule, the Owner or Operator must, within 90 days of declaring an SSI for an Appendix III constituent, either establish an assessment monitoring program for the CWTP or demonstrate that a source other than the CWTP is the cause of the SSI declaration(s) (Federal Register, 2020).

WSP recommends transitioning to assessment monitoring for the CWTP and performing continued trend testing after each monitoring event and updates to the BTVs after 1-2 years of future sampling events. Exceedances of pH were comparable to background concentrations at the CWTP but warrant further statistical review to assure BTVs in Table 1 of **Attachment A** are current and representative of groundwater conditions.

Date: April 3, 2023

Subject: **CCR Groundwater Semiannual Detection Monitoring**
Statistical Evaluation of CWTP Data through November 2022
Arizona Public Service Company Four Corners Power Plant – Fruitland, New Mexico

1.0 INTRODUCTION

This Technical Memorandum (Tech Memo) documents the statistical evaluation of detection monitoring (i.e., Appendix III constituents) groundwater data associated with the Combined Waste Treatment Pond (CWTP) unit located at the Arizona Public Service Company (APS) Four Corners Power Plant (FCPP) in Fruitland, New Mexico. This routine statistical evaluation is completed by Geoscience Consulting Strategies LLC in accordance with the Statistical Data Analysis Work Plan (SDAWP) for the FCPP and the Coal Combustion Residuals (CCR) Rule (Federal Register, 2020; WSP USA Environment & Infrastructure Inc. (WSP), 2023).

This statistical evaluation incorporates the CWTP November 2022 semiannual detection monitoring results and any corresponding resample events, as necessary. Following is a summary of the statistical evaluation of the November 2022 CWTP detection monitoring groundwater data. The following sections present data inputs, statistical methods, results, and conclusions.

2.0 DATA INPUTS

The CWTP groundwater monitoring well network consists of three background monitoring wells (MW-71, MW-72, and MW-73) and four compliance (i.e., downgradient) monitoring wells (MW-62, MW-63, MW-64 and MW-65).

The CWTP detection monitoring program performs statistical evaluations semiannually. The period of evaluation for this subject analysis ranges from November 2015 through November 2022 and includes:

1) the minimum of eight initial, or baseline, sampling rounds required by the CCR Rule and eleven subsequent sampling rounds of detection monitoring that occur on a semi-annual frequency; and

2) a January 2023 resampling event to confirm initial exceedance declarations in November 2022 for boron and calcium at MW-62 (see Table 2).

Due principally to the CCR Rule requirement that a minimum of eight initial rounds of data be collected from the site prior to October 17, 2017, the frequency of sample collection prior to this date is short and variable (e.g., biweekly to quarterly sampling).

This statistical data evaluation includes 25 to 30 sample results each for boron, calcium, chloride, fluoride, sulfate, total dissolved solids (TDS), and field pH at each compliance monitoring well. The CWTP detection monitoring program consists of eleven sampling rounds occurring between November 2017 and November 2022:

CWTP Sampling Round	Date
1st	November 2017
2nd	June 2018
3rd	November 2018
4th	May 2019
5th	December 2019
6th	June 2020
7th	November 2020
8th	April 2021
9th	November 2021
10th	May 2022
11th	November 2022

All Appendix III constituents were evaluated during these monitoring events except for chloride and sulfate in May 2019 due to the inadvertent exclusion of these analytes on the Chain of Custody in the field.

Appendix A contains the contents of the ProUCL data upload tables for the subject analysis. Data inputs for this statistical analysis were prepared, and provided by, WSP. The Appendix III analytes are listed by name or chemical symbol as column headers in the ProUCL data upload table. By ProUCL convention, each analyte has a corresponding data column (indicated with a "D_" prefix) that indicates if the analyte was detected or not at a concentration that exceeds the analytical reporting limit, where detectable concentrations are symbolized by a "1" and non-detectable concentrations are symbolized by a "0." The detection frequency is 100% for all compliance well sample data listed in Appendix A.

3.0 METHODS

This statistical analysis follows the statistical methods and approaches put forth in the FCPP SDAWP (WSP, 2023) and the United States Environmental Protection Agency (US EPA) Unified Guidance (2009). The subject statistical analysis consists of: 1) exploratory data analysis (EDA), including outlier analysis, calculating summary statistics, temporal trend analysis and fitting a statistical distribution model (i.e., Goodness-of-Fit Test Statistics) to sample populations and 2) comparing the November 2022 sample concentrations to corresponding not-to-exceed BTVs in Table 1. If an exceedance exists, the statistical significance of this exceedance is assessed through the prescribed resampling strategy. For this statistical analysis, the January 2023 resampling event fulfills the 1 of 2 resampling strategy for boron and calcium at MW-62.

4.0 RESULTS

Table 2 summarizes: 1) Appendix III constituent concentrations relative to their respective BTV for each compliance well and 2) which constituents exhibit statistically significant ($p<0.05$) temporal trends.

Appendix B includes the EDA results.

This statistical analysis results in the following:

Monitoring Well MW-62. The November 2022 sampling event shows an initial exceedance for boron and calcium at this monitoring location (Table 2). The resampling event in January 2023 confirms the initial exceedances for boron and calcium are statistically significant ($p<0.05$). The January 2023 resampling event also indicates an exceedance for pH albeit this constituent did not require resampling based on the November 2022 sample results. The remaining Appendix III sample concentrations at this monitoring location fall below their respective BTVs for the November 2022 sampling event.

There is an absence of statistically significant ($p<0.05$) temporal trends at this monitoring location for this reporting period.

Monitoring Well MW-63. As shown in Table 2, the November 2022 sampling event shows an initial exceedance for field pH at this monitoring location. There is no resampling event recorded for this monitoring location. The remaining Appendix III sample concentrations at this monitoring location fall below their respective BTVs for the November 2022 sampling event.

The statistically significant ($p<0.05$) decreasing trends for chloride and TDS remain persistent at this monitoring location during the November 2022 sampling event. Statistically significantly ($p<0.05$) decreasing trends for boron and sulfate become apparent in MW-63 during the November 2022 sampling event.

Monitoring Well MW-64. The Appendix III sample concentrations for boron, calcium, chloride, fluoride, sulfate, field pH and TDS fall below or within their respective BTVs for the November 2022 sampling event.

The statistically significant ($p<0.05$) decreasing trends for boron, calcium and TDS remain persistent at this monitoring location during the November 2022 sampling event.

Monitoring Well MW-65. The Appendix III sample concentrations for boron, calcium, chloride, fluoride, sulfate, field pH and TDS fall below or within their respective BTVs for the November 2022 sampling event.

There are persistent and statistically significant ($p<0.05$) decreasing trends for TDS and boron at this sampling location.

5.0 RECOMMENDATIONS

There is sufficient evidence to declare statistically significant increases (SSI) in boron and calcium concentrations over their respective BTVs at MW-62 using the 1 of 2 resampling strategy (Table 1). Per 40 Code of Federal Regulations (CFR) Sections (§) 257.90 through 257.98, the Owner or Operator must, within 90 days of declaring an SSI for an Appendix III constituent, either establish an assessment monitoring

program for the CWTP or demonstrate that a source other than the CWTP is the cause of the SSI declaration(s) (Federal Register, 2020).

There is no resample on record to determine the statistical significance of the initial exceedance for pH at MW-63 during this reporting period. Furthermore, the January 2023 resampling event did demonstrate an exceedance for pH at MW-62, albeit this constituent did not require resampling in January 2023. The sample exceedances for pH at MW-62 and MW-63 are comparable to sample concentrations observed in background wells for this sampling period. With this said, background concentrations at the CWTP warrant further statistical review to assure BTVs in Table 1 are current and representative of groundwater conditions.

TABLES

Table 1
Interwell and Intrawell BTVs for the Four Corners CWTP
Appendix III Statistical Analysis

Interwell	Dates Corresponding to Data Used to Derive UPL	Constituent	Interwell UPL (BTV Calculation Method)	Units	Resampling Strategy[1]
MW-71 and MW-72	3/5/2016-11/12/2021	Boron	0.73 (NP-UPL)[2]	mg/L	1 of 2
MW-73	2/2/2017-11/13/2021	Boron	2.0 (NP-UPL)[3]	mg/L	1 of 2
MW-71 and MW-72	3/5/2016-11/12/2021	Calcium	486 (P-UPL)[2]	mg/L	1 of 2
MW-73	2/2/2017-11/13/2021	Calcium	536 (P-UPL)[3]	mg/L	1 of 2
MW-71, MW-72, and MW-73	3/5/2016-11/13/2021	Chloride	631 (P-UPL)	mg/L	1 of 2
MW-71, MW-72, and MW-73	3/5/2016-11/13/2021	pH (upper limit)	6.90 (P-UPL)[3]	SU	1 of 2
MW-71, MW-72, and MW-73	3/5/2016-11/13/2021	pH (lower limit)	6.5 (P-LPL)[3]	SU	1 of 2
MW-71, MW-72, and MW-73	3/5/2016-11/13/2021	Sulfate	13,000 (NP-UPL)	mg/L	1 of 3
MW-71, MW-72, and MW-73	3/5/2016-11/13/2021	TDS	20,000 (NP-UPL)	mg/L	1 of 3

Intrawell	Dates Corresponding to Data Used to Derive UPL	Constituent	Intrawell UPL (BTV Calculation Method[1])	Units	Resampling Strategy[1]
MW-62	11/9/2015-11/15/2021	Fluoride	1.8 (NP-UPL)	mg/L	1 of 3
MW-63	11/4/2015-11/15/2021	Fluoride	2.3 (P-UPL)	mg/L	1 of 2
MW-64	11/5/2015-11/15/2021	Fluoride	1.6 (NP-UPL)	mg/L	1 of 3
MW-64	11/5/2015-11/15/2021	pH	7.66 (P-UPL)	SU	1 of 2
MW-64	11/5/2015-11/15/2021	pH	7.23 (P-LPL)	SU	1 of 2
MW-65	11/5/2015-11/15/2021	Fluoride	2.1 (NP-UPL)	mg/L	1 of 3
MW-65	11/5/2015-11/15/2021	pH	7.45 (P-UPL)	SU	1 of 2
MW-65	11/5/2015-11/15/2021	pH	6.98 (P-LPL)	SU	1 of 2

Notes:

BTV = background threshold value
CWTP = Combined Waste Treatment Pond
LPL = Lower Prediction Limit
mg/L = milligrams per liter
NP = Non Parametric
P = Parametric
SU = standard units
UPL = Upper Prediction Limit

[1] Resampling strategies are chosen based on acceptance of the sitewide false positive error rate and the effective power of the test.

[2] Only applicable to MW-64 and MW-65

[3] Only applicable to MW-62 and MW-63

Table 2
Four Corners CWTP Downgradient Sample Data Summary
Appendix III Statistical Analysis

Well	Sample_ID	SampleDate	Constituent Concentration						
			Boron	Calcium	Chloride	Fluoride	pH	Sulfate	TDS

Notes:

BTV = background threshold value

mg/L = milligrams per liter

TDS = total dissolved solids

UPL = upper prediction limit

SU = standard units

0.75	Value from baseline monitoring period (November 2015 thru October 2017)
	Reported value in current sampling round exceeds the BTV or UPL
	Statistically significant increasing trend present
	Statistically significant decreasing trend present
None	Insufficient evidence to identify a trend
	Updated BTV (See Table 1)

[1] See Table 1 for relevant BTV and Intrawell UPL information

[2] For pH, values presented refer to the Upper Prediction Limit/Lower Prediction Limit, respectively

[3] Temporal trends evaluated with Mann-Kendall trend tests ($p<0.05$); tied values (sequential sample concentrations

2023 ANALYTICAL LABORATORY REPORTS

eurofins | Environment Testing

ANALYTICAL REPORT

PREPARED FOR

Attn: Natalie Chrisman
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Generated 2/15/2023 3:38:04 PM Revision 1

JOB DESCRIPTION

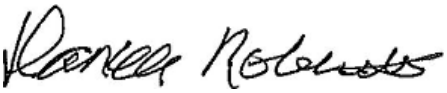
CCR Groundwater Monitoring
SDG NUMBER APS Four Corners Power Plant (CWTP)

JOB NUMBER

550-196988-1

Eurofins Phoenix
4625 East Cotton Center Boulevard
Suite #189
Phoenix AZ 85040

See page two for job notes and contact information.



Job Notes

This report is issued solely for the use of the person or company to whom it is addressed. Any use, copying or disclosure other than by the intended recipient is unauthorized. If you have received this report in error, please notify the sender and destroy this report immediately. This report shall not be reproduced except in full, without prior express written approval by the laboratory.

The data in the report relate to the field sample(s) as received by the laboratory and associated QC. All results have been reviewed and have been found to be compliant with laboratory and accreditation requirements, with the exception of the noted deviation(s). For questions, please contact the Project Manager.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-196988-1
SDG: APS Four Corners Power Plant (CWTP)

Qualifiers

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-196988-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-196988-1

Comments
The report being provided is a revision of the original report sent on 2/06/2023. The report (revision 1) is being revised due to: Calcium added.

No additional comments.

Receipt
The samples were received on 1/30/2023 10:39 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.8º C.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
B1	Target analyte detected in method blank at or above the method reporting limit.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the blank.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
N1	See case narrative.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-201909-1

Receipt
The samples were received on 5/8/2023 4:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 7 coolers at receipt time were 1.8º C, 1.8º C, 2.0º C, 2.0º C, 2.0º C, 2.0º C and 2.4º C.

HPLC/IC
Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: FC-CCR-MW62-0523 (550-201909-1), FC-CCR-MW63-0523 (550-201909-2), FC-CCR-MW64-0523 (550-201909-3), FC-CCR-MW65-0523 (550-201909-4), FC-CCR-SW1-0523 (550-201909-5), FC-CCR-SW2-0523 (550-201909-6), FC-CCR-SW3-0523 (550-201909-7), FC-CCR-FD08-0523 (550-201909-8), FC-CCR-MW66-0523 (550-201909-9), FC-CCR-MW70-0523 (550-201909-10), FC-CCR-MW73-0523 (550-201909-11), FC-CCR-MW83-0523 (550-201909-12) and FC-CCR-MW86-0523 (550-201909-13). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: FC-CCR-FD02-0523 (550-201909-14) and FC-CCR-MW61-0523 (550-201909-16). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: FC-CCR-DMX03-0523 (550-201909-21), FC-CCR-DMX04-0523 (550-201909-22), FC-CCR-MW05-0523 (550-201909-25), FC-CCR-MW06-0523 (550-201909-26), FC-CCR-MW11-0523 (550-201909-27), FC-CCR-MW17R-0523 (550-201909-29), FC-CCR-MW18-0523 (550-201909-30) and FC-CCR-MW23R-0523 (550-201909-33). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: FC-CCR-MW75-0523 (550-201909-17) and FC-CCR-MW87-0523 (550-201909-18). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: FC-CCR-MW24-0523 (550-201909-34), FC-CCR-MW36R-0523 (550-201909-36) and FC-CCR-MW38R-0523 (550-201909-37). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

Method 300.0: The following samples were diluted due to matrix interferences as well as high amounts of metals constituents: FC-CCR-MW56-0523 (550-201909-38), FC-CCR-MW57-0523 (550-201909-40) and FC-CCR-MW82S-0523 (550-201909-46). A metals test was performed on the undiluted samples which produced strong positive results. Therefore to reduce these interferences, dilutions

Job ID: 550-201909-1 (Continued)

Laboratory: Eurofins Phoenix (Continued)

were prepared prior to the instrument analysis. The samples were re-tested at increasing dilutions and run at the lowest dilutions which presented with minimized interference. This analyte was not detected in the diluted samples. As such, elevated reporting limits (RLs) have been provided and the results have been qualified with D flags.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method 200.7 Rev 4.4: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 280-612031 and analytical batch 280-613158 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 200.7 Rev 4.4: The method blank for preparation batch 280-612170 and analytical batch 280-613151 contained Ca above the reporting limit (RL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method 200.7 Rev 4.4: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 280-612170 and analytical batch 280-613779 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 200.8: The LCS was missed during scanning of batch sheets, therefore the raw data is off by one and corrected in TALS

FC-CCR-MW62-0523 (550-201909-1), FC-CCR-MW63-0523 (550-201909-2), FC-CCR-MW64-0523 (550-201909-3), FC-CCR-MW65-0523 (550-201909-4), FC-CCR-SW1-0523 (550-201909-5), FC-CCR-SW2-0523 (550-201909-6), FC-CCR-SW3-0523 (550-201909-7), FC-CCR-FD08-0523 (550-201909-8), FC-CCR-MW66-0523 (550-201909-9), FC-CCR-MW70-0523 (550-201909-10), FC-CCR-MW73-0523 (550-201909-11), FC-CCR-MW83-0523 (550-201909-12), FC-CCR-MW86-0523 (550-201909-13), FC-CCR-FD02-0523 (550-201909-14), FC-CCR-MW52-0523 (550-201909-15), FC-CCR-MW52-0523 (550-201909-15[MS]), FC-CCR-MW52-0523 (550-201909-15[MSD]), FC-CCR-MW61-0523 (550-201909-16), FC-CCR-MW75-0523 (550-201909-17), FC-CCR-MW87-0523 (550-201909-18), FC-CCR-FD03-0523 (550-201909-19), FC-CCR-DMX01-0523 (550-201909-20), FC-CCR-DMX01-0523 (550-201909-20[MS]), FC-CCR-DMX01-0523 (550-201909-20[MSD]), (LCS 280-612031/25-A), (LCS 280-612170/26-A), (MB 280-612170/1-A), (550-201909-B-15-D PDS) and (550-201909-B-15-D SD)

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 280-612170 and analytical batch 280-613435 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 200.8: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 280-612031 and analytical batch 280-613435 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

Method SM 2540C: The analysis volume selected for the following sample produced a base result greater than 200mg before calculation of the final result: FC-CCR-MW87-0523 (550-201909-18). Reanalysis could not be performed due to holding time exceedance. The reference method specifies that no more than 200mg of weight be recovered for a chosen sample analysis volume in order to produce the best data precision. As such, these data have been qualified.

Method SM 2540C: Constant weight was not achieved after 3 drying cycles for the following samples: FC-CCR-MW87-0523 (550-201909-18).

Method SM 2540C: Constant weight was not achieved after 3 drying cycles for the following samples: FC-CCR-SW3-0523 (550-201909-7) and FC-CCR-SUMP15-0523 (550-201909-60).

Method SM 2540C: The analysis volume selected for the following sample produced a base result greater than 200mg before calculation of the final result: FC-CCR-SUMP18-0523 (550-201909-63). Reanalysis could not be performed due to holding time exceedance. The

Laboratory: Eurofins Phoenix (Continued)

reference method specifies that no more than 200mg of weight be recovered for a chosen sample analysis volume in order to produce the best data precision. As such, these data have been qualified.

Method SM 2540C: The method blank for analytical batch 550-300213 contained Total Dissolved Solids above the reporting limit (RL). Associated sample were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-201909-1
SDG: APS Four Corners Power Plant

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-09-23

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Denver

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0713	12-20-24

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____								1	4	4	1	

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☑ Return to Client ☑ Disposal by Lab ☑ Archive for_____ Months

Special Instructions/QC Requirements & Comments:

Method 200.8 with collision cell

Custody Seals Intact: ☐ Yes ☐ No | Custody Seal No.: | Cooler Temp. (°C): Obs'd:_____ Corr'd:_____ | Therm ID No.:_____

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months
Deliverable Requested: I, II, III, IV, Other (specify) Primary Deliverable Rank: 2	Special Instructions/QC Requirements:

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the blank.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-202029-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-202029-1

Comments
No additional comments.

Receipt
The samples were received on 5/10/2023 5:13 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.6º C and 3.3º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
Method SM 2540C: The method blank for analytical batch 550-300213 contained Total Dissolved Solids above the reporting limit (RL). Associated sample were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

Method SM 2540C: Constant weight was not achieved after 3 drying cycles for the following sample: FC-CCR-EB01-0523 (550-202029-4).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
B7	Target analyte detected in method blank at or above method reporting limit. Concentration found in the sample was 10 times above the concentration found in the blank.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-202030-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-202030-1

Comments
No additional comments.

Receipt
The samples were received on 5/10/2023 5:07 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 1.6º C.

HPLC/IC
Method 300.0: The following sample was diluted due to the nature of the sample matrix having a high concentration of metals, which can cause damage to the instrument: FC-CCR-MW49A-0523 (550-202030-3). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Methods 200.8, 6020B: The continuing calibration verification (CCV) associated with batch 280-613485 recovered above the upper control limit for As. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: (CCV 280-613485/91) and (550-202032-C-1-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2540C: The method blank for analytical batch 550-300213 contained Total Dissolved Solids above the reporting limit (RL). Associated sample were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Client Information (Sub Contract Lab)	Sampler:	Lab PM: Roberts, Danielle C	Carrier Tracking No(s):	COC No: 550-36826.1
Client Contact: Shipping/Receiving	Phone:	E-Mail: Danielle.Roberts@et.eurofinsus.com	State of Origin: Arizona	Page: Page 1 of 1
Company: TestAmerica Laboratories, Inc.		Accreditations Required (See note): State - Arizona; State Program - Arizona		Job #: 550-202030-1
Address: 4955 Yarrow Street, ,	Due Date Requested: 5/23/2023			
City: Arvada	TAT Requested (days):			
State, Zip: CO, 80002				
Phone: 303-736-0100(Tel) 303-431-7171(Fax)	PO #:			
Email:	WO #:			
Project Name: CCR Groundwater Monitoring	Project #: 55009706			
Site: Arizona Public Service	SSOW#:			

Analysis Requested

Preservation Codes:

A - HCL, B - NaOH, C - Zn Acetate, D - Nitric Acid, E - NaHSO4, F - MeOH, G - Amchlor, H - Ascorbic Acid, I - Ice, J - DI Water, K - EDTA, L - EDA, M - Hexane, N - None, O - AsNaO2, P - Na2O4S, Q - Na2SO3, R - Na2S2O3, S - H2SO4, T - TSP Dodecahydrate, U - Acetone, V - MCAA, W - pH 4-5, Y - Trizma, Z - other (specify)

Other:

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=Comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	200.7/200.7_P_TOT Lithium-ICP	200.8/200.8_P_TR Sb, As, Ba, Cd, Co, Cr, Pb, Mo, Se, Tl	Total Number of containers	Special Instructions/Note:
			Preservation Code:							
FC-CCR-MW07-0523 (550-202030-1)	5/8/23	15:18 Arizona		Water			X	X	1	AZ Sample, Collision Cell
FC-CCR-MW08-0523 (550-202030-2)	5/8/23	14:07 Arizona		Water			X	X	1	AZ Sample, Collision Cell
FC-CCR-MW49A-0523 (550-202030-3)	5/8/23	16:34 Arizona		Water			X	X	1	AZ Sample, Collision Cell

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months
Deliverable Requested: I, II, III, IV, Other (specify) Primary Deliverable Rank: 2	Special Instructions/QC Requirements:

Empty Kit Relinquished by:	Date:	Time:	Method of Shipment:

Login Sample Receipt Checklist

Client: Arizona Public Service Company

Job Number: 550-202030-1
SDG Number: APS Four Corners Power Plant (Mulitunit)

Login Number: 202030
List Number: 1
Creator: Maycock, Lisa

List Source: Eurofins Phoenix

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

JOB DESCRIPTION

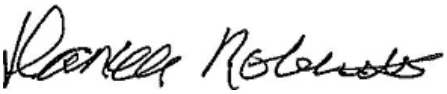
CCR Groundwater Monitoring
SDG NUMBER APS Four Corners Power Plant (URS)

JOB NUMBER

550-202031-1

Eurofins Phoenix
4625 East Cotton Center Boulevard
Suite #189
Phoenix AZ 85040

See page two for job notes and contact information.



my EOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-202031-1
SDG: APS Four Corners Power Plant (URS)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-202031-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-202031-1

Comments
No additional comments.

Receipt
The samples were received on 5/10/2023 5:07 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 1.6º C and 3.3º C.

HPLC/IC
Method 300.0: The following samples were diluted due to the nature of the sample matrix having a high concentration of metals, which can cause damage to the instrument: FC-CCR-MW67-0523 (550-202031-1), FC-CCR-MW68-0523 (550-202031-2) and FC-CCR-CM01-0523 (550-202031-8). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Methods 200.8, 6020B: The continuing calibration verification (CCV) associated with batch 280-613485 recovered above the upper control limit for As. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are impacted: FC-CCR-MW84-0523 (550-202031-6), FC-CCR-MW85-0523 (550-202031-7), FC-CCR-CM01-0523 (550-202031-8), FC-CCR-CM02-0523 (550-202031-9), FC-CCR-FD01-0523 (550-202031-10), (CCV 280-613485/91) and (550-202032-C-1-A).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2540C: Constant weight was not achieved after 3 drying cycles for the following sample: FC-CCR-MW67-0523 (550-202031-1) and FC-CCR-MW69-0523 (550-202031-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-202031-1
SDG: APS Four Corners Power Plant (URS)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Denver

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0713	12-20-24

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

SDG: APS Dour Corners Power Plant (CWTP)

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-204018-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-204018-1

Comments
No additional comments.

Receipt
The samples were received on 6/29/2023 10:39 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 3.4º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of analyte.
D5	Minimum Reporting Limit (MRL) adjusted due to sample dilution; analyte was non-detect in the sample.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-204020-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-204020-1

Comments
No additional comments.

Receipt
The samples were received on 6/29/2023 10:39 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 2.0º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Sample Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-204020-1
SDG: APS Four Corners Power Plant (URS)

Lab Sample ID	Client Sample ID	Matrix	Collected	Received

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-204020-1
SDG: APS Four Corners Power Plant (URS)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Denver

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0713	12-20-24

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☑ Disposal by Lab ☐ Archive for_____ Months

Special Instructions/QC Requirements & Comments:

Site: Arizona Public Service	SSOW#:			

Analysis Requested

Preservation Codes:

A - HCL, B - NaOH, C - Zn Acetate, D - Nitric Acid, E - NaHSO4, F - MeOH, G - Amchlor, H - Ascorbic Acid, I - Ice, J - DI Water, K - EDTA, L - EDA, M - Hexane, N - None, O - AsNaO2, P - Na2O4S, Q - Na2SO3, R - Na2S2O3, S - H2SO4, T - TSP Dodecahydrate, U - Acetone, V - MCAA, W - pH 4-5, Y - Trizma, Z - other (specify)

Other:

Sample Identification - Client ID (Lab ID)	Sample Date	Sample Time	Sample Type (C=Comp, G=grab)	Matrix (W=water, S=solid, O=waste/oil, BT=Tissue, A=Air)	Field Filtered Sample (Yes or No)	Perform MS/MSD (Yes or No)	200.7/200.7_P_TOT Lithium-ICP	Total Number of containers	Special Instructions/Note:
			Preservation Code:						
FC-CCR-MW71-0523 (550-204020-1)	6/27/23	18:34 Arizona		Water			X	1	AZ Sample
FC-CCR-MW72-0523 (550-204020-2)	6/27/23	17:31 Arizona		Water			X	1	AZ Sample
FC-CCR-MW73-0523 (550-204020-3)	6/27/23	16:23 Arizona		Water			X	1	AZ Sample

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Possible Hazard Identification	Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)
Unconfirmed	☐ Return To Client ☐ Disposal By Lab ☐ Archive For _____ Months

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
H2	Initial analysis within holding time. Reanalysis for the required dilution was past holding time.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-210428-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-210428-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/10/2023 4:12 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8°C and 2.4°C

HPLC/IC
Method 300_ORGFMS: Spike compounds were inadvertently omitted during the extraction process for the matrix spike (MS); therefore, matrix spike recoveries are unavailable for analytical batch 550-311323. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300_ORGFMS: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 550-311323 was outside control limits. Spike omitted from matrix spike (MS). Laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540C_Calcd: Reanalysis of the following sample was performed outside of the analytical holding time due to residue being >0.2000 g at 5 mL : FC-CCR-SUMP18-1123 (550-210428-19).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
L3	The associated blank spike recovery was above method acceptance limits.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
R6	LFB/LFBD RPD exceeded method control limit. Recovery met acceptance criteria.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-210426-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-210426-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/10/2023 2:28 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.7°C

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 200.8_CWA_LL: The laboratory control sample (LCS) associated with preparation batch 550-311057 and analytical batch 550-311226 was outside acceptance criteria for the analytes Barium and Lead. Re-extraction and/or re-analysis could not be performed; therefore, the data has been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance. FC-CCR-MW62-1123 (550-210426-1), FC-CCR-MW63-1123 (550-210426-2), FC-CCR-MW64-1123 (550-210426-3) and FC-CCR-MW65-1123 (550-210426-4)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
L3	The associated blank spike recovery was above method acceptance limits.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
R6	LFB/LFBD RPD exceeded method control limit. Recovery met acceptance criteria.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
H2	Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-210427-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-210427-1

Receipt
The samples were received on 11/10/2023 2:28 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.7º C.

HPLC/IC
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals
Method 200.8 LL: The laboratory control sample (LCS) associated with preparation batch 550-311057 and analytical batch 550-311226 was outside acceptance criteria for the analytes Barium and Lead. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance. FC-CCR-MW66-1123 (550-210427-1), FC-CCR-MW70-1123 (550-210427-2), FC-CCR-MW71-1123 (550-210427-3), FC-CCR-MW72-1123 (550-210427-4), FC-CCR-MW73-1123 (550-210427-5) and FC-CCR-MW86-1123 (550-210427-6)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry
Method SM 2540C: Reanalysis of the following sample was performed outside of the analytical holding time due to residue being > 0.200 g at 10 mL : FC-CCR-MW71-1123 (550-210427-3).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

550-210427 Chain of Custody

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Definitions/Glossary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-210429-1

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.

Metals

Qualifier	Qualifier Description
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-210429-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-210429-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/10/2023 2:28 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8°C and 2.4°C

HPLC/IC
Method 300_ORGFMS: Spike compounds were inadvertently omitted during the extraction process for the matrix spike (MS); therefore, matrix spike recoveries are unavailable for analytical batch 550-311323. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300_ORGFMS: The matrix spike / matrix spike duplicate (MS/MSD) precision for analytical batch 550-311323 was outside control limits. Spike omitted from matrix spike (MS). Laboratory control sample duplicate (LCS/LCSD) precision was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 200.8_CWA_LL: The laboratory control sample (LCS) associated with preparation batch 550-311057 and analytical batch 550-311226 was outside acceptance criteria for the analytes Barium and Lead. Re-extraction and/or re-analysis could not be performed; therefore, the data have been reported. The batch matrix spike/matrix spike duplicate (MS/MSD) was within acceptance limits and may be used to evaluate matrix performance. FC-CCR-MW52-1123 (550-210429-1), FC-CCR-MW61-1123 (550-210429-2) and FC-CCR-MW75-1123 (550-210429-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-210429-1

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Calscience

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0830	11-16-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.7 Rev 4.4	200.7	Water	Lithium

550-210429 Chain of Custody

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.

Metals

Qualifier	Qualifier Description
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
L5	The associated blank spike recovery was above laboratory/method acceptance limits. This analyte was not detected in the sample.
M1	Matrix spike recovery was high, the associated blank spike recovery was acceptable.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-210591-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-210591-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/15/2023 2:43 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.6°C

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 200.8_CWA_LL: Samples were diluted 10x due to matrix

FC-CCR-SW1-1123 (550-210591-1), FC-CCR-SW2-1123 (550-210591-2), FC-CCR-SW3-1123 (550-210591-3), FC-CCR-FD08-1123 (550-210591-4), (550-210594-B-12-C), (550-210594-B-12-A MS) and (550-210594-B-12-B MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-210591-1
SDG: APS Four Corners Power Plant (CWTP)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Calscience

All accreditations/certifications held by this laboratory are listed. Not all accreditations/certifications are applicable to this report.

Authority	Program	Identification Number	Expiration Date
California	SCAQMD LAP	17LA0919	11-30-23
California	State	3082	07-31-24
Nevada	State	CA00111	07-31-24

550-210591 Chain of Custody

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	False	Check done at department level as required.

ANALYTICAL REPORT

PREPARED FOR

Attn: Natalie Chrisman
Arizona Public Service Company
PO BOX 188, Ste. 4458
Joseph City, Arizona 86032

Generated 12/6/2023 2:29:23 PM

JOB DESCRIPTION

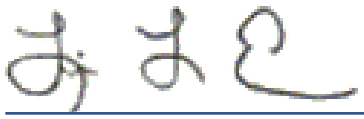
CCR Groundwater Monitoring
APS Four Corners Power Plant (URS)

JOB NUMBER

550-210593-1

Eurofins Phoenix
4625 East Cotton Center Boulevard
Suite #189
Phoenix AZ 85040

See page two for job notes and contact information.



my EOL

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.

Metals

Qualifier	Qualifier Description
L3	The associated blank spike recovery was above method acceptance limits.
L4	The associated blank spike recovery was below method acceptance limits.
L5	The associated blank spike recovery was above laboratory/method acceptance limits. This analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
T5	Laboratory not licensed for this parameter
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
H1	Sample analysis performed past holding time.
H2	Initial analysis within holding time. Reanalysis for the required dilution was past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-210593-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-210593-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/15/2023 2:43 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 4.1°C

HPLC/IC
Method 300_ORGFMS: Spike compounds were inadvertently omitted during the extraction process for the matrix spike/matrix spike duplicate (MS/MSD); therefore, matrix spike recoveries are unavailable for analytical batch 550-311405. The associated laboratory control sample (LCS) met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 200.8_CWA_LL: Samples were diluted 10x due to matrix

FC-CCR-MW67-1123 (550-210593-1), FC-CCR-MW68-1123 (550-210593-2), FC-CCR-MW69-1123 (550-210593-3), FC-CCR-MW83-1123 (550-210593-4), FC-CCR-MW84-1123 (550-210593-5), FC-CCR-MW85-1123 (550-210593-6), FC-CCR-FD01-1123 (550-210593-7), FC-CCR-CM01-1123 (550-210593-8), FC-CCR-CM02-1123 (550-210593-9), (550-210594-B-12-C), (550-210594-B-12-A MS) and (550-210594-B-12-B MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540C_Calcd: The following sample was analyzed outside of analytical holding time due to residue being >0.2000 g at 10 mL: FC-CCR-MW67-1123 (550-210593-1).

Method 2540C_Calcd: Reanalysis of the following sample was performed outside of the analytical holding time due to noticeable errors in the bag weights from batch 311341 : FC-CCR-MW84-1123 (550-210593-5).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-210593-1
SDG: APS Four Corners Power Plant (URS)

Laboratory: Eurofins Phoenix

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0728	06-10-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.8 LL	200.8	Water	Molybdenum
SM 4500 H+ B		Water	Temperature

Laboratory: Eurofins Calscience

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

Authority	Program	Identification Number	Expiration Date
Arizona	State	AZ0830	11-16-24

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
200.7 Rev 4.4	200.7	Water	Lithium

550-210593 Chain of Custody

Note: Since laboratory accreditations are subject to change, Eurofins Environment Testing Southwest, LLC places the ownership of method, analyte & accreditation compliance upon our subcontract laboratories. This sample shipment is forwarded under chain-of-custody. If the laboratory does not currently maintain accreditation in the State of Origin listed above for analysis/tests/matrix being analyzed, the samples must be shipped back to the Eurofins Environment Testing Southwest, LLC laboratory or other instructions will be provided. Any changes to accreditation status should be brought to Eurofins Environment Testing Southwest, LLC attention immediately. If all requested accreditations are current to date, return the signed Chain of Custody attesting to said compliance to Eurofins Environment Testing Southwest, LLC.

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southwest, LLC Project Manager.

Qualifiers

HPLC/IC

Qualifier	Qualifier Description
D2	Sample required dilution due to high concentration of analyte.
E2	Concentration estimated. Analyte exceeded calibration range. Reanalysis not performed due to sample matrix.
M2	Matrix spike recovery was low, the associated blank spike recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.

Metals

Qualifier	Qualifier Description
L5	The associated blank spike recovery was above laboratory/method acceptance limits. This analyte was not detected in the sample.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to the spike level. The associated blank spike was acceptable.
R4	MS/MSD RPD exceeded the method control limit. Recovery met acceptance criteria.
T5	Laboratory not licensed for this parameter
V1	CCV recovery was above method acceptance limits. This target analyte was not detected in the sample.

General Chemistry

Qualifier	Qualifier Description
D1	Sample required dilution due to matrix.
H1	Sample analysis performed past holding time.
H5	This test is specified to be performed in the field within 15 minutes of sampling; sample was received and analyzed past the regulatory holding time.
T5	Laboratory not licensed for this parameter

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Job ID: 550-210594-1

Laboratory: Eurofins Phoenix

Narrative

Job Narrative
550-210594-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt
The samples were received on 11/15/2023 2:43 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 4.1°C, 4.8°C and 5.1°C

HPLC/IC
Method 300_ORGFMS: Spike compounds were inadvertently omitted during the extraction process for the matrix spike/matrix spike duplicate (MS/MSD); therefore, matrix spike recoveries are unavailable for analytical batch 550-311405. The associated laboratory control sample (LCS) met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
Method 200.7_CWA: The following samples were diluted due to the nature of the sample matrix: FC-CCR-DMX03-1123 (550-210594-2), FC-CCR-MW18-1123 (550-210594-8), FC-CCR-MW19-1123 (550-210594-9), FC-CCR-MW23R-1123 (550-210594-10), FC-CCR-MW24-1123 (550-210594-11), FC-CCR-MW30-1123 (550-210594-12), FC-CCR-MW30-1123 (550-210594-12[MS]), FC-CCR-MW30-1123 (550-210594-12[MSD]), FC-CCR-MW36R-1123 (550-210594-13), FC-CCR-MW38R-1123 (550-210594-14), FC-CCR-MW56-1123 (550-210594-15), FC-CCR-FD05-1123 (550-210594-16), FC-CCR-MW57-1123 (550-210594-17), FC-CCR-MW77S-1123 (550-210594-18), FC-CCR-MW78S-1123 (550-210594-19), FC-CCR-MW79S-1123 (550-210594-20), FC-CCR-MW82S-1123 (550-210594-22), FC-CCR-FD06-1123 (550-210594-23), FC-CCR-FD07-1123 (550-210594-24) and FC-CCR-FD02-1123 (550-210594-25). Elevated reporting limits (RLs) are provided.

Method 200.8_CWA_LL: Samples were diluted 10x due to matrix

FC-CCR-DMX04-1123 (550-210594-3), FC-CCR-MW05-1123 (550-210594-4), FC-CCR-MW06R-1123 (550-210594-5), FC-CCR-FD04-1123 (550-210594-6), FC-CCR-MW17R-1123 (550-210594-7), FC-CCR-MW30-1123 (550-210594-12), FC-CCR-MW30-1123 (550-210594-12[MS]) and FC-CCR-MW30-1123 (550-210594-12[MSD])

Method 200.8_CWA_LL: Samples diluted 10x for sample matrix.

FC-CCR-DMX01-1123 (550-210594-1), FC-CCR-DMX01-1123 (550-210594-1[MS]) and FC-CCR-DMX01-1123 (550-210594-1[MSD])

Method 200.8_CWA_LL: Samples diluted 10x for sample matrix

FC-CCR-DMX03-1123 (550-210594-2), FC-CCR-MW18-1123 (550-210594-8), FC-CCR-MW19-1123 (550-210594-9), FC-CCR-MW23R-1123 (550-210594-10), FC-CCR-MW24-1123 (550-210594-11), FC-CCR-MW36R-1123 (550-210594-13), FC-CCR-MW38R-1123 (550-210594-14), FC-CCR-MW56-1123 (550-210594-15), FC-CCR-FD05-1123 (550-210594-16), FC-CCR-MW57-1123 (550-210594-17), FC-CCR-MW77S-1123 (550-210594-18), FC-CCR-MW78S-1123 (550-210594-19), FC-CCR-MW79S-1123 (550-210594-20), FC-CCR-MW81-1123 (550-210594-21), FC-CCR-MW81-1123 (550-210594-21[MS]), FC-CCR-MW81-1123 (550-210594-21[MSD]), FC-CCR-MW82S-1123 (550-210594-22), FC-CCR-FD06-1123 (550-210594-23), FC-CCR-FD07-1123 (550-210594-24) and FC-CCR-FD02-1123 (550-210594-25)

Job ID: 550-210594-1 (Continued)

Laboratory: Eurofins Phoenix (Continued)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
Method 2540C_Calcd: The following sample was analyzed outside of analytical holding time due to residue being >0.2000 g at 10 mL: FC-CCR-MW24-1123 (550-210594-11).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: Arizona Public Service Company
Project/Site: CCR Groundwater Monitoring

Job ID: 550-210594-1
SDG: APS Four Corners Power Plant (Other)

Client Sample ID: FC-CCR-DMX01-1123 — Lab Sample ID: 550-210594-1

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Boron	90	M3	0.25		mg/L	5		200.7 Rev 4.4	Total/NA
Molybdenum	23	T5	5.0		ug/L	10		200.8 LL	Total/NA

Client Sample ID: FC-CCR-DMX03-1123 — Lab Sample ID: 550-210594-2

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Chloride	1100	D2	400		mg/L	200		300.0	Total/NA
Sulfate	13000	D2	400		mg/L	200		300.0	Total/NA
Boron	1.2		0.25		mg/L	5		200.7 Rev 4.4	Total/NA
Calcium	470		10		mg/L	5		200.7 Rev 4.4	Total/NA
Magnesium	2300		10		mg/L	5		200.7 Rev 4.4	Total/NA
Manganese	0.44		0.050		mg/L	5		200.7 Rev 4.4	Total/NA
Potassium	62		2.5		mg/L	5		200.7 Rev 4.4	Total/NA
Sodium	3600		2.5		mg/L	5		200.7 Rev 4.4	Total/NA
Lithium	0.97		0.25		mg/L	5		200.7 Rev 4.4	Total Recoverable
Arsenic	0.0088		0.0050		mg/L	10		200.8 LL	Total/NA
Barium	0.016		0.0050		mg/L	10		200.8 LL	Total/NA
Selenium	0.0072		0.0050		mg/L	10		200.8 LL	Total/NA
Alkalinity as CaCO3	850		6.0		mg/L	1		SM 2320B	Total/NA
Bicarbonate Alkalinity as CaCO3	850		6.0		mg/L	1		SM 2320B	Total/NA
Total Dissolved Solids	19000		200		mg/L	1		SM 2540C	Total/NA
pH	7.2	H5	1.7		SU	1		SM 4500 H+ B	Total/NA
Temperature	14.9	H5 T5	0.1		Degrees C	1		SM 4500 H+ B	Total/NA

Client Sample ID: FC-CCR-DMX04-1123 — Lab Sample ID: 550-210594-3

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Chloride	440	D2	400		mg/L	200		300.0	Total/NA
Fluoride	0.95	D2	0.80		mg/L	2		300.0	Total/NA
Sulfate	6500	D2	400		mg/L	200		300.0	Total/NA
Boron	1.6		0.25		mg/L	5		200.7 Rev 4.4	Total/NA
Calcium	450		10		mg/L	5		200.7 Rev 4.4	Total/NA
Magnesium	750		10		mg/L	5		200.7 Rev 4.4	Total/NA
Manganese	0.53		0.050		mg/L	5		200.7 Rev 4.4	Total/NA
Manganese	0.56		0.050		mg/L	5		200.7 Rev 4.4	Total/NA
Potassium	33		2.5		mg/L	5		200.7 Rev 4.4	Total/NA
Sodium	1800		2.5		mg/L	5		200.7 Rev 4.4	Total/NA
Lithium	0.73		0.10		mg/L	2		200.7 Rev 4.4	Total Recoverable
Arsenic	0.0078		0.0050		mg/L	10		200.8 LL	Total/NA
Barium	0.011		0.0050		mg/L	10		200.8 LL	Total/NA
Molybdenum	0.0072	T5	0.0050		mg/L	10		200.8 LL	Total/NA
Alkalinity as CaCO3	350		6.0		mg/L	1		SM 2320B	Total/NA
Bicarbonate Alkalinity as CaCO3	350		6.0		mg/L	1		SM 2320B	Total/NA
Total Dissolved Solids	10000		100		mg/L	1		SM 2540C	Total/NA
pH	7.6	H5	1.7		SU	1		SM 4500 H+ B	Total/NA
Temperature	14.7	H5 T5	0.1		Degrees C	1		SM 4500 H+ B	Total/NA

Client Sample ID: FC-CCR-MW05-1123 — Lab Sample ID: 550-210594-4

Analyte	Result	Qualifier	RL		Unit	Dil Fac	D	Method	Prep Type
Chloride	4200	D2	400		mg/L	200		300.0	Total/NA

This Detection Summary does not include radiochemical test results.
