

ESCALATING COSTS IMPACT COMMON GRID MATERIALS

Over the past five years (2021-25), APS has experienced rapidly rising costs for equipment needed to deliver power to customers. That includes sharply increased prices for commonly used components like power poles, wires and transformers that serve neighborhoods in communities across Arizona.

APS continues to invest in its system to maintain top-tier reliability and resilience while focusing on keeping bills as low as possible for customers. Updating rates will help ensure APS supports Arizona's unprecedented growth with affordable, reliable energy today and into the future.
