### 700.0 INTRODUCTION

Arizona Public Service Company recognizes the value of the Industry Uniform Grounding and Bonding requirements. We are pleased to share the following illustrations and data applicable to the requirements.

This information will provide assistance and guidance to person’s installing Service Entrance equipment in areas served by APS with no municipal or county electrical inspection authority.

The methods of Grounding and Bonding of Service Entrance equipment shown in this manual are recommended by APS to maintain consistency throughout APS’s service territory.

The following drawings and tables will assist in assuring a safe and adequate grounding installation, acceptable under any code.

If the area you are building in has a county or municipal inspection authority, please contact that authority for their regulations.

### 700.1 GENERAL INFORMATION

1. Customer wire shall not be run through utility sealed areas. This includes ground electrode conductors as well as any avoidable bond conductors.

2. Weatherproof hubs, jam nuts, etc., shall be used on any penetrations of equipment at the same height or above energized areas. A good rule of thumb is; that unless the penetration is on the bottom surface of a can, it shall be done with a weatherproof connection. Indoor equipment is an exception to this requirement.

3. Self-bonding hubs (Meyers or equivalent) shall not be used on multi-centric knockouts, unless the largest knockout is used.

4. Interior metal water piping systems shall be bonded to the service entrance enclosure with conductors sized to the ampacity of the main bus per NEC. (See Paragraph 701.0)
   In multiple occupancy buildings where the interior metal water piping system for the individual occupancies is isolated from all other occupancies by the use of non-metallic pipe, each water system may be bonded to the panel board or switchboard enclosure supplying that occupancy, sized per NEC.

5. Other metal piping systems (E.G. Gas pipe) shall be bonded to the service equipment enclosure with a conductor sized to the largest branch circuit or feeder supplying the facility, sized per NEC (See Paragraph 701.0)

6. Nonconductive paint must be removed at threads, contact points and contact surfaces of any ground/bond lugs, terminal strips, etc., to assure a good electrical connection.

### 700.2 GROUNDING

The ground electrode conductor may be either bare or with green insulation. See Paragraph 701.0 for ground electrode conductor size. Ground electrode conductors not encased in conduit shall be a minimum size of No. 4 copper or larger and must be securely fastened to the building or structure with approved fastening devices. The spacing of such devices shall not exceed 2 feet. If a ground rod is used as an electrode, at least 8 feet shall be in contact with the soil.

Ground Electrode conductors smaller than size No. 4 copper shall be solid copper wire, or shall be attached to the ground rod using the exothermic welding process.

### 700.3 BONDING (Unfused areas)

See Paragraph 701.0 for bond conductor size. Bonding is required on all enclosures, equipment, raceways, and fittings which contain unfused service conductors. Nipples and bushings installed with eccentric or concentric lock nuts must be bonded with ground bushings, wedges, or other approved devices. Bond conductor size shall be determined by the ampere rating of the service entrance equipment.

### NOTES:

1. For sizing bonding conductor for gas line, per NEC. For sizing any bond conductor required on the load side of fuses or circuit breakers.
2. For sizing water bonds per NEC.
3. For sizing main bonding jumper from equipment grounding bus to neutral bus, per NEC. For sizing conductor used for bonding unfused nipples and equipment.
4. Grounding electrode conductors need not be larger than #4 (solid or stranded) copper if there is only one connection between the concrete encased electrode or manmade electrode (for example – ground rod) & grounded system conductor (neutral conductor), per NEC.
ELECTRIC SERVICE REQUIREMENTS

SERVICE DISCONNECT

1. IF NEUTRAL BUS IS INSULATED FROM THE ENCLOSURE INSTALL A BONDING JUMPER OR SCREW, PER N.E.C.

2. SEE N.E.C. FOR TYPE AND SIZE OF MATERIAL AND PROTECTION OF THE GROUNDING ELECTRODE CONDUCTOR. (SEE N.E.C. FOR INSTALLATION AND SIZE)

3. GROUND ELECTRODE SHALL BE TERMINATED IN A DRY LOCATION IF RE-BAR USED.

4. CONNECTION TO ELECTRODE. CONNECT GROUNDING ELECTRODE CONDUCTOR TO GROUNDING ELECTRODE WITH APPROVED GROUND CLAMP. (SEE N.E.C.)

5. APPROVED SYSTEM GROUND CLAMPS SHALL BE ACCESSIBLE (SEE N.E.C.)

6. BOND TO INTERIOR METALLIC COLD WATER PIPING SYSTEMS PER N.E.C.

7. GROUND ELECTRODE (SEE N.E.C.)
