The APS Four Corners Transaction is Good for...

**THE ENVIRONMENT**

Under rules proposed by the U.S. Environmental Protection Agency (EPA) in October 2010, Units 1, 2 and 3 would have been subject to significant environmental upgrades.

Closing the three older, less efficient units and keeping the cleaner, more efficient Units 4 and 5 in operation will dramatically reduce the carbon footprint in the region and enable the plant to remain compliant with state and federal environmental standards.

In addition, water use at the plant will decrease by 6,000 acre feet per year.

**CLOSURE OF UNITS 1, 2 AND 3 WILL REDUCE PLANT EMISSIONS BY:**

- **Mercury Emissions:** 61%
- **Particulates:** 43%
- **NOx Emissions**: 36%
- **CO₂ Emissions:** 30%
- **SO₂ Emissions:** 24%

*Additional NOx emission reductions are anticipated after pending visibility requirements are finalized by the EPA.*
